<i>Preface</i>	<i>page</i>	<i>xi</i>
<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	QED, QCD, and confinement	1
1.2	Scalar field	5
<b>2</b>	<b>Path-integral and lattice regularization</b>	<b>8</b>
2.1	Path integral in quantum mechanics	8
2.2	Regularization by discretization	10
2.3	Analytic continuation to imaginary time	12
2.4	Spectrum of the transfer operator	13
2.5	Latticization of the scalar field	15
2.6	Transfer operator for the scalar field	18
2.7	Fourier transformation on the lattice	20
2.8	Free scalar field	22
2.9	Particle interpretation	25
2.10	Back to real time	26
2.11	Problems	28
<b>3</b>	<b><math>O(n)</math> models</b>	<b>32</b>
3.1	Goldstone bosons	32
3.2	$O(n)$ models as spin models	34
3.3	Phase diagram and critical line	36
3.4	Weak-coupling expansion	39
3.5	Renormalization	46
3.6	Renormalization-group beta functions	48
3.7	Hopping expansion	51
3.8	Lüscher–Weisz solution	55
3.9	Numerical simulation	60

3.10	Real-space renormalization group and universality	67
3.11	Universality at weak coupling	71
3.12	Triviality and the Standard Model	74
3.13	Problems	79
<b>4</b>	<b>Gauge field on the lattice</b>	<b>83</b>
4.1	QED action	83
4.2	QCD action	85
4.3	Lattice gauge field	90
4.4	Gauge-invariant lattice path integral	95
4.5	Compact and non-compact Abelian gauge theory	97
4.6	Hilbert space and transfer operator	99
4.7	The kinetic-energy operator	102
4.8	Hamiltonian for continuous time	105
4.9	Wilson loop and Polyakov line	107
4.10	Problems	112
<b>5</b>	<b><math>U(1)</math> and <math>SU(n)</math> gauge theory</b>	<b>115</b>
5.1	Potential at weak coupling	115
5.2	Asymptotic freedom	121
5.3	Strong-coupling expansion	125
5.4	Potential at strong coupling	129
5.5	Confinement versus screening	132
5.6	Glueballs	135
5.7	Coulomb phase, confinement phase	136
5.8	Mechanisms of confinement	138
5.9	Scaling and asymptotic scaling, numerical results	140
5.10	Problems	144
<b>6</b>	<b>Fermions on the lattice</b>	<b>149</b>
6.1	Naive discretization of the Dirac action	149
6.2	Species doubling	151
6.3	Wilson's fermion method	156
6.4	Staggered fermions	160
6.5	Transfer operator for Wilson fermions	161
6.6	Problems	165
<b>7</b>	<b>Low-mass hadrons in QCD</b>	<b>170</b>
7.1	Integrating over the fermion fields	170
7.2	Hopping expansion for the fermion propagator	171
7.3	Meson and baryon propagators	173
7.4	Hadron masses at strong coupling	177

7.5	Numerical results	179
7.6	The parameters of QCD	188
7.7	Computing the gauge coupling from the masses	190
7.8	Problems	190
<b>8</b>	<b>Chiral symmetry</b>	193
8.1	Chiral symmetry and effective action in QCD	193
8.2	Pseudoscalar masses and the $U(1)$ problem	199
8.3	Chiral anomalies	202
8.4	Chiral symmetry and the lattice	204
8.5	Spontaneous breaking of chiral symmetry	212
8.6	Chiral gauge theory	217
8.7	Outlook	223
8.8	Problems	223
<b>Appendix A</b>	<b><math>SU(n)</math></b>	229
A.1	Fundamental representation of $SU(n)$	229
A.2	Adjoint representation of $SU(n)$	231
A.3	Left and right translations in $SU(n)$	234
A.4	Tensor method for $SU(n)$	236
<b>Appendix B</b>	<b>Quantization in the temporal gauge</b>	239
<b>Appendix C</b>	<b>Fermionic coherent states</b>	242
<b>Appendix D</b>	<b>Spinor fields</b>	253
