Contents

1. Introduction **1**
- 1.1. Motivation . . . 1
- 1.2. State of the art . . . 1
- 1.3. Goal . . . 4
- 1.4. Structure . . . 5

2. The direct problem **7**
- 2.1. Basic equations . . . 7
  - 2.1.1. Kinematics . . . 8
  - 2.1.2. Stresses . . . 9
  - 2.1.3. Balance equations . . . 10
  - 2.1.4. Constitutive equations . . . 11
  - 2.1.5. Deviatoric/volumetric split . . . 13
- 2.2. The primal problem . . . 13
  - 2.2.1. Strong formulation . . . 14
  - 2.2.2. Weak formulation . . . 15
  - 2.2.3. Linearization . . . 18
  - 2.2.4. Discretization with the Galerkin method in space and time . . . 21
  - 2.2.5. Discretization of the linearization with the Galerkin method in space and time . . . 23
  - 2.2.6. Matrix formulation of standard implementations . . . 25
  - 2.2.7. Solution of the discretized problem . . . 29
- 2.3. The dual problem . . . 33
  - 2.3.1. Quantity of interest . . . 34
  - 2.3.2. Weak formulation . . . 35
  - 2.3.3. Discretization with the Galerkin method in space and time . . . 37
  - 2.3.4. Matrix formulation and solution . . . 39
- 2.4. Error estimation . . . 44
  - 2.4.1. Error representation . . . 44
  - 2.4.2. Temporal error . . . 47
  - 2.4.3. Spatial error . . . 51
  - 2.4.4. Evaluation and localization of error indicators . . . 53
  - 2.4.5. Higher order approximation of exact solutions . . . 57
    - 2.4.5.1. Temporal recovery . . . 57
    - 2.4.5.2. Spatial recovery . . . 57
- 2.5. A mixed plane stress triangular element at large deformations . . . 61
  - 2.5.1. Introduction . . . 61

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.5.2. Kinematic decomposition 63
2.5.3. Weak formulation 64
2.5.4. Isoparametric discretization 66
2.5.5. Residuals 68
2.5.6. Linearization 69
2.5.7. Numerical examples 71
2.6. Material dependent contributions for direct primal and dual problem 79
2.6.1. Von Mises plasticity at small deformations 80
2.6.1.1. Contributions for primal problem 80
2.6.1.2. Contributions for dual problem 81
2.6.2. Hyperelasticity based on principal stretches 83
2.6.2.1. Contributions for primal problem 83
2.6.2.2. Contributions for dual problem 86
2.6.3. Hyperelasticity based on invariants 86
2.6.3.1. Contributions for primal problem 86
2.6.3.2. Contributions for dual problem 88
2.6.4. Viscoelasticity at large deformations 88
2.6.4.1. Contributions for primal problem 88
2.6.4.2. Contributions for dual problem 91
2.6.5. Plane stress via local iteration 93
2.7. Numerical examples for the direct problem 93
2.7.1. Von Mises stress at intermediate region for von Mises plasticity 93
2.7.2. Vertical displacement at top region for von Mises plasticity . . 99
2.7.3. Von Mises stress at whole region for viscoelasticity 102
2.7.4. Von Mises stress at local region for viscoelasticity 106

3. The inverse problem **109**
3.1. Fundamentals 109
3.1.1. Parameter identification 109
3.1.2. Optical measurements 111
3.2. The primal problem 112
3.2.1. The weak formulation for the optimization problem 113
3.2.2. Sensitivity analysis 116
3.2.3. Optimization algorithm 117
3.2.4. Discretization with the Galerkin method in space and time . . 117
3.2.5. Matrix formulation 119
3.2.6. Solution of the inverse problem 122
3.3. Material dependent contributions for the inverse problem 123
3.3.1. Hyperelasticity 124
3.3.1.1. Hyperelasticity based on principal stretches 124
3.3.1.2. Hyperelasticity based on invariants 125
3.3.2. Viscoelasticity 126
3.4. The dual problem 127
3.4.1. Quantity of interest 128

3.4.2. Weak formulation . . . 128
3.4.3. Discretization with the Galerkin method in space and time . . 133
3.4.4. Matrix formulation and solution . . . 136
3.5. Error estimation . . . 139
3.5.1. Error representation . . . 139
3.5.2. Temporal error . . . 141
3.5.3. Spatial error . . . 142
3.5.4. Evaluation and localization of error indicators . . . 143
3.6. Numerical examples for the inverse problem . . . 146
3.6.1. Perforated strip with synthetic data for hyperelasticity . . . 146
3.6.2. Perforated strip with experimental data for hyperelasticity . . 152
3.6.3. Perforated strip with synthetic data for viscoelasticity . . . 158

4. Summary and outlook **163**
4.1. Summary . . . 163
4.2. Outlook . . . 164

Bibliography **165**

A. Integration rules **193**
A.1. Rectangular rule . . . 193
A.2. Trapezoidal rule . . . 193

B. Correlation matrix **195**

C. Partial integration **197**
