<i>Preface</i>	<i>ix</i>
<i>Acknowledgements</i>	<i>xiii</i>
<i>About the Authors</i>	<i>xv</i>
Chapter 1: Introduction	1
1.1 Why Study Photosynthesis?	1
1.2 History	2
1.2.1 The discovery of photosynthesis	2
1.2.2 The concept of energy	5
1.2.3 Early research on photosynthesis	7
1.2.3.1 What absorbs the light for photosynthesis?	7
1.2.3.2 What goes in, and what comes out?	8
1.2.3.3 Which atoms go where? Is it possible to answer this question?	10
1.2.3.4 How much light is required to drive photosynthesis?	13
References	14
Chapter 2: The Photosynthetic Apparatus	17
2.1 Introduction	17
2.2 Chloroplasts	17
2.3 Thylakoid Membrane and Photosynthetic Protein Complexes	20
2.4 Pigments	23
2.5 Lipids and Proteins	23
2.6 Evolution	26
References	26
Chapter 3: Basics of Photosynthesis: Light-Dependent Reactions	29
3.1 Overview: Harvesting Sunlight to Drive Redox Chemistry	29
3.2 Capturing the Energy of Light	29
3.3 Conversion of Light Energy into Chemical Energy	36

Contents

3.3.1	Primary photochemistry	36
3.3.2	Electron-transfer pathways	41
3.3.2.1	The “Z-scheme” of photosynthesis	41
3.3.2.2	Photosynthetic water oxidation (oxygen evolution)	43
3.3.2.3	Unique role of bicarbonate in light-induced reactions of PSII	44
3.3.2.4	Formation of reducing power	45
3.3.3	Proton-transfer pathways and formation of ATP (photophosphorylation)	46
	References	51
	Chapter 4: Basics of Photosynthesis: The Carbon Reactions	59
4.1	C ₃ Photosynthesis: The Calvin-Benson Cycle	59
4.2	C ₄ Photosynthesis: The Hatch–Slack Pathway	63
4.3	Crassulacean Acid Metabolism	69
4.4	Translocation and Biomass Production	71
4.5	Alternate Pathways and Evolution	74
	References	75
	Chapter 5: Regulation of Photosynthesis	81
5.1	Background	81
5.2	State Transitions	82
5.3	Safety Valve: Dissipation of Electronic Energy as Heat (“Quenching”)	86
5.4	Xanthophyll Cycles	87
5.5	Reaction Centers as Sinks for Excess Excitation Energy	90
5.6	Quenching of Chlorophyll Triplets	93
5.7	Regulation of RuBisCO	94
5.8	Redox Regulation of Certain Calvin-Benson Cycle Enzymes by Thioredoxin	95
5.9	Other Regulatory Mechanisms Related to Photosynthesis	96

5.10 Leaf Movement	97
5.11 Concluding Remarks	97
References	98
Chapter 6: Photosynthesis and Our Planet	107
6.1 Oxygenation of the Earth's Atmosphere	107
6.2 Protection: Ozone Was Formed From Oxygen and It Protects Us From the UV Radiation	108
6.3 Earth Temperature Over Time and the Effect of the Biosphere on It	110
6.3.1 Influence of the Sun	110
6.3.2 Influence of the Earth's atmosphere	111
6.4 Conclusion	115
References	117
Chapter 7: Anoxygenic Photosynthesis	123
7.1 Introduction	123
7.2 Anoxygenic Photosynthetic Organisms: Their Reaction Centers and Pathways for Carbon Assimilation	125
7.3 Relation between the RCs of Anoxygenic and Oxygenic Photosynthetic Organisms	127
7.4 Photosynthetic N ₂ Assimilation	128
7.5 Rhodopsin-Based Phototrophy	131
References	132
Chapter 8: The Past, Present and the Future	135
8.1 Spread of Photosynthesis by Successive Endosymbiosis	135
8.2 Adapting Photosynthesis that has Evolved Underwater for Life on Land	140
8.2.1 Grana	141
8.2.2 Hormones	142
8.2.3 Stomata	143
8.2.4 Reaching for light	145

Contents

8.2.4.1	Evolution of trees	145
8.2.4.2	Cheating: Lianas (Climbers) and Epiphytes	145
8.3	The Role of Fungi	145
8.4	Making More Photosynthesis... More Biomass, More Bioenergy, New Chemicals and Hydrogen	146
8.4.1	General: Classical breeding and genetic engineering	146
8.4.2	Conversion from C3 to C4 metabolism by genetic engineering	146
8.4.3	Cyanobacterial genes in higher plants	147
8.4.4	Improvement of RuBisCO	148
8.4.5	Photorespiratory bypass	149
8.4.6	Photosynthetic H ₂ production	149
8.4.7	Biofuels and other chemicals	152
8.4.8	Other improvements	152
	References	153
	Chapter 9: The Ultimate: Artificial Photosynthesis	165
9.1	Objectives and Approaches	165
9.2	Water Oxidation Coupled to Hydrogen Production: in Principle Simple, in Practice Not So Easy	166
9.3	Reduction of Carbon Dioxide	172
9.4	Conclusions	176
	References	177
