<b>I. FUNDAMENTALS OF USING LINEAR PROGRAMMING</b>	
1. What is Linear Programming?	1
2. Solving LPs on a Computer – The LINDO Program	7
3. Analysis of LP Solutions and Elementary Sensitivity Analysis	15
4. Dimensional Analysis and Avoiding Common Errors	35
5. Nonlinearities and Variables Unconstrained in Sign	41
<b>II. CLASSES OF LP MODELS AND THEIR FORMULATION</b>	
6. General Steps of Model Formulation and Usage	47
7. Product Mix	51
8. Covering/Staffing/Cutting Stock	61
9. Blending	79
10. Multiperiod Planning	93
11. Multistage, Vertically Integrated and Input-Output Models	113
12. Network, Distribution and PERT/CPM	123
13. Multiperiod Planning Problems with Random Elements	137
14. Game Theory LPs	149
15. Application to Statistical Estimation	155
16. Problems of Economic Equilibria as LPs	171
17. Integer Programming	185
<b>III. SPECIAL TOPICS AND TECHNICAL CONSIDERATIONS</b>	
18. Parametric Analysis	205
19. The Simplex Solution Method for LPs	215
20. Matrix Generators	225
21. The MPS Format for Describing LPs	233
<b>BIBLIOGRAPHY</b>	<b>239</b>
<b>INDEX</b>	<b>241</b>
