

## Contents

### Chapter 1 ***Arabidopsis* as a Tool for the Identification of Genes Involved in Plant Development**

R. Finkelstein, M. Estelle, J. Martinez-Zapater, and  
C. Somerville, East Lansing, Mich., and Bloomington, Ind.,  
U. S. A.

- I. Introduction 1
- II. Phytohormone Mutants 3
  - A. Introduction 3
  - B. Auxin 5
  - C. Ethylene 7
  - D. Gibberellins 8
  - E. Abscisic Acid 10
- III. Environmental Regulation of Growth and Development 12
  - A. Introduction 12
  - B. Tropic Responses 13
  - C. Phytochrome 14
  - D. Flowering Induction 15
- IV. Conclusions and Future Directions 18
- V. References 20

### Chapter 2 **Regulation of Gene Expression During Seed Germination and Postgerminative Development**

J. J. Harada, R. A. Dietrich, L. Comai, and C. S. Baden,  
Davis, Calif., U. S. A.

- I. Introduction 27
- II. Differential Gene Expression Underlies Seed Germination 28
- III. Spatial Regulation of Postgermination-Abundant Genes 30
- IV. Activation of Postgermination-Abundant Genes 33
- V. Future Directions 36
- VI. References 37

- Chapter 3 Genes Involved in the Patterns of Maize Leaf Cell Division**  
 M. Freeling, D. K. Bongard-Pierce, N. Harberd, B. Lane,  
 and S. Hake, Berkeley and Albany, Calif., U. S. A.
- I. Introduction 41
  - II. The Shoot Apical Meristem as a Self-Regulating Unit 43
  - III. Heterochrony 43
  - IV. Maize Leaf Mesophyll and Epidermis Lineage Maps 44
  - V. Leaf Vascularization and Development Compartments 45
  - VI. The Importance of Periclinal Divisions 47
  - VII. Strict Versus Loose Programming of Epidermal Cell Division 48
  - VIII. Alternative Models Involving the Programming of Cell Division 50
  - IX. The Ligule and Mutants that Affect It 52
  - X. *Kn 1*: Neomorphic Mutants that Induce the Epidermis to Divide 55
  - XI. Conclusions About Leaf and Ligule Development Derived from  
 Mutant Analyses, and the Concept of Cell Age Identity 58
  - XII. Where Are the Molecules? 60
  - XIII. References 60
- Chapter 4 Molecular Analysis of Genes Determining Spatial Patterns in  
*Antirrhinum majus***  
 E. S. Coen, J. Almeida, T. P. Robbins, A. Hudson, and  
 R. Carpenter, Norwich, U. K.
- I. Introduction 63
  - II. *Cis*-Acting Mutations 66
    - A. Stable *cis*-Acting Mutations 66
    - B. Unstable *cis*-Acting Mutations 70
  - III. *Trans*-Acting Mutations 74
  - IV. Mutations Which Act Both in *cis* and *trans* 76
  - V. Conclusions 78
  - VI. References 79
- Chapter 5 Isolation of Differentially Expressed Genes from Tomato  
 Flowers**  
 C. S. Gasser, A. G. Smith, K. A. Budelier, M. A. Hinchee,  
 S. McCormick, R. B. Horsch, D. M. Shah, and R. T. Fraley,  
 St. Louis, Mo., U. S. A.
- I. Introduction 83
  - II. Screening for Floral-Specific cDNAs 85
  - III. Organ and Temporal Specificity of Floral Clones 89
  - IV. Tissue Specificity of Floral Clones 91
  - V. Discussion 93
  - VI. References 95

**Chapter 6 Anther- and Pollen-Expressed Genes**  
 J. P. Mascarenhas, Albany, N. Y., U. S. A.

- I. Introduction 97
  - A. Anther and Microsporangium Development 98
  - B. Summary of Meiosis, Pollen, and Pollen Tube Development 98
- II. Gene Expression in the Anther 99
  - A. The Tapetum 99
  - B. Other Anther Tissues 101
- III. Gene Expression in the Developing Male Gametophyte 102
  - A. Specific Transcription and Translation 102
  - B. Estimates of Numbers of Genes Expressed in Pollen 106
  - C. Cloning of Pollen-Expressed Genes and the Pattern of Transcription of Specific mRNAs 107
  - D. Overlap of Sporophytic and Gametophytic Gene Expression 108
  - E. Sperm Cells 109
- IV. References 110

**Chapter 7 Self-Incompatibility Genes in Flowering Plants**  
 E. C. Cornish, J. M. Pettitt, and A. E. Clarke, Melbourne, Victoria, Australia

- I. Introduction 117
- II. Homomorphic Incompatibility 118
  - A. The General Features of Gametophytic Self-Incompatibility 118
  - B. The General Features of Sporophytic Self-Incompatibility 118
- III. Heteromorphic Incompatibility 119
- IV. Nature of the Self-Incompatibility Reaction 119
- V. Nature of the S-Gene Products 121
  - A. Gametophytic Systems 122
    - 1. *Nicotiana glauca* 122
    - 2. *Petunia hybrida* 122
    - 3. *Lycopersicon peruvianum* 122
    - 4. *Prunus avium* 123
    - 5. *Lilium longiflorum* 123
    - 6. *Trifolium pratense* 123
  - B. Sporophytic Systems 123
    - 1. *Brassica oleracea* 123
    - 2. *Brassica campestris* 124
- VI. Studies of the Molecular Basis of Self-Incompatibility 124
- VII. Concluding Comments 126
- VIII. References 127

**Chapter 8     Regulatory Circuits of Light-Responsive Genes**  
M. Cuzzo, S. A. Kay, and N.-H. Chua, New York, N. Y.,  
U.S.A.

- I. Introduction 131
- II. Multiplicity of Light Effects 132
  - A. Photomorphogenesis 132
  - B. Effects on Gene Expression 133
  - C. Rhythms 135
- III. Effectors of Photoreception 136
  - A. Phytochrome 136
  - B. Signal Transduction 139
  - C. *Cis*-Acting DNA Sequences 141
  - D. *Trans*-Acting Factors 144
- IV. Conclusions 145
- V. References 146

**Chapter 9     Regulation of Gene Expression by Ethylene**  
J. E. Lincoln and R. L. Fischer, Berkeley, Calif., U.S.A.

- I. Introduction 155
  - A. Plant Hormones 155
  - B. Ethylene and the Control of Tomato Fruit Ripening 156
  - C. Induction of the Gene Expression by Exposure to Exogenous Ethylene 156
  - D. A Model System for Studying Hormonal Regulation of Gene Expression During Plant Development 157
- II. Analysis of Ethylene-Inducible Gene Expression 157
  - A. Isolation of cDNA Clones 157
  - B. Induction of Gene Expression by Exogenous Ethylene in Unripe Tomato Fruit 159
  - C. Activation of Gene Expression and Ethylene Production During Tomato Fruit Development 162
  - D. Repression of Gene Expression by a Competitive Inhibitor of Ethylene Action 163
- III. Discussion 164
- IV. References 165

**Chapter 10    Root Nodule Symbiosis: Nodulins and Nodulin Genes**  
D. P. S. Verma and A. J. Delauney, Montreal, Canada, and  
Columbus, Ohio, U.S.A.

- I. Introduction 170
- II. An Overview of Legume Nodulation 170
- III. Induction of Plant Genes Coding for Nodulins 171

- A. Nodulin Structure and Function 171
  - 1. Leghemoglobins 174
  - 2. Nitrogen-Assimilatory Enzymes 176
    - a) Glutamine Synthetase 176
    - b) Uricase II 177
    - c) Xanthine Dehydrogenase 178
    - d) Purine Nucleosidase 178
  - 3. Enzymes Involved in Carbon Metabolism 178
    - a) Sucrose Synthase
  - 4. Nodulins of Unknown Functions 180
    - a) Nodulin-A Family 181
    - b) Peribacteroid Membrane (pbm) Nodulins 181
    - c) Early Nodulins 183
    - d) "Nodulin-25" of Alfalfa 183
- B. Regulation of Nodulin Gene Expression 184
  - 1. Induction of Early Nodulin Genes Does Not Require Intracellular Bacteria or Infection Threads 184
  - 2. Expression of Late Nodulins Requires Infection Threads or Intracellular Bacteria 185
  - 3. Some Nodulins May Require Nitrogen Fixation for Induction 187
  - 4. Nodulin Gene Regulation at the Molecular Level: *cis*-Regulatory Sequences 188
  - 5. Physiological Factors Involved in Induction of Nodulin Genes 189
- IV. Rapid Evolution of Legume-*Rhizobium* Symbiosis 190
- V. References 193

## Chapter 11 **Structure and Expression of Plant Genes Encoding Pathogenesis-Related Proteins**

J. F. Bol, Leiden, The Netherlands

- I. Introduction 201
  - A. Occurrence of PR Proteins 201
  - B. Induction of PR Proteins 205
  - C. PR Proteins and Acquired Resistance 207
- II. Characteristics of PR mRNAs and Genes 208
  - A. cDNA Cloning of PR mRNAs 208
  - B. Genes Corresponding to Groups A, B, C and G 210
  - C. Genes Corresponding to Groups D, E and F 212
- III. General Conclusion 213
  - A. Role of PR Proteins 213
  - B. Prospects for Future Research 216
- IV. References 217

- Chapter 12 Proteinase Inhibitor Gene Families: Tissue Specificity and Regulation**  
C. A. Ryan, Pullman, Wash., U. S. A.
- I. Introduction 223
  - II. Developmentally Regulated Proteinase Inhibitor Genes in Seeds, Tubers, and Fruit 226
  - III. Wound-Inducible Proteinase Inhibitor Genes in Leaves 229
  - IV. Summary 231
  - V. References 232
- Chapter 13 Cell Wall Extensin Genes**  
J. B. Cooper, Stanford, Calif., U. S. A.
- I. Cell Walls 235
  - II. Extensin Networks 235
    - A. Insoluble Extensins 237
    - B. Soluble Extensins 238
    - C. Extensin Crosslinking 239
  - III. Extensin Genes 240
    - A. Cloning Extensins 240
    - B. Functional Domains 242
    - C. Gene Regulation 245
  - IV. Prospects 249
  - V. References 249
- Chapter 14 The Expression of Heat Shock Genes — A Model for Environmental Stress Response**  
F. Schöffl, G. Baumann, and E. Raschke, Bielefeld, Federal Republic of Germany
- I. Introduction 253
    - A. The Heat Shock Response 253
    - B. Groups of Related Heat Shock Proteins 254
    - C. Heat Shock and Other Environmental Stresses 256
  - II. Molecular Biology of Heat Shock Genes 258
    - A. Sequence Homology Among Small Heat Shock Proteins 258
    - B. Heat Shock Promoter and Upstream Sequences 261
    - C. Heterologous Expression of *hs* Genes in Transgenic Plants 264
  - III. General Conclusions 267
  - IV. References 268
- Chapter 15 Protein Transport in Plant Cells**  
P. Weisbeek and S. Smeekens, Utrecht, The Netherlands
- I. Introduction 275
  - II. The Secretory Pathway 278

III.	Post-Translational Transport	279
A.	The Nucleus	279
B.	The Chloroplast	280
1.	Import	280
2.	Fusion Proteins	283
3.	Mutants in Envelope Translocation	286
4.	Mutants in Thylakoid Translocation	287
5.	Processing	289
C.	The Mitochondrion	290
D.	Endosomes	291
IV.	Conclusions	291
V.	References	292
Chapter 16	<b>Genetic Engineering of Herbicide Resistance Genes</b>	
	D. M. Shah, C. S. Gasser, G. della-Cioppa, and G. M. Kishore, St. Louis, Mo., U. S. A.	
I.	Introduction	297
II.	Identification and Engineering of Herbicide Resistance Genes	298
A.	Glyphosate Resistance	298
B.	Phosphinothricin Resistance	304
C.	Sulfonylurea and Imidazolinone Resistance	306
III.	Conclusions	308
IV.	References	309
Chapter 17	<b>Virus Cross-Protection in Transgenic Plants</b>	
	R. N. Beachy, St. Louis, Mo., U. S. A.	
I.	Introduction	313
A.	Classical Cross-Protection: Applications and Limitations	313
B.	Proposed Mechanisms of Cross-Protection	314
II.	Genetic Transformation to Produce Virus Resistant Plants	316
A.	Expression of Viral Coat Protein Coding Sequences in Transgenic Plants	316
B.	Resistance to Virus Infection in Transgenic Plants	319
C.	Elucidating the Mechanism(s) of Engineered Protection	323
D.	Expression of Other Viral Sequences in Transgenic Plants	325
III.	Field Testing of Virus Protection in Transgenic Plants	326
IV.	Conclusions	327
V.	References	328
