PREFACE TO THE DOVER EDITION xi

PREFACE xv

Chapter 1 OPTIMIZATION PROBLEMS 1

1.1 Introduction 1
1.2 Optimization Problems 3
1.3 Neighborhoods 7
1.4 Local and Global Optima 8
1.5 Convex Sets and Functions 10
1.6 Convex Programming Problems 13
Problems 16
Notes and References 17
Appendix: Terminology and Notation 19
A.1 Linear Algebra 19
A.2 Graph Theory 20
A.3 Pidgin Algol 24

Chapter 2 THE SIMPLEX ALGORITHM 26

2.1 Forms of the Linear Programming Problem 26
2.2 Basic Feasible Solutions 29
2.3 The Geometry of Linear Programs 34
2.3.1 Linear and Affine Spaces 34
2.3.2 Convex Polytopes 34
2.3.3 Polytopes and LP 37
2.4 Moving from bfs to bfs 42
2.5 Organization of a Tableau 44
2.6 Choosing a Profitable Column 46
2.7 Degeneracy and Bland's Anticycling Algorithm 50
2.8 Beginning the Simplex Algorithm 55
2.9 Geometric Aspects of Pivoting 59
Problems 63
Notes and References 65

Chapter 3 DUALITY 67

3.1 The Dual of a Linear Program in General Form 67
3.2 Complementary Slackness 71
3.3 Farkas' Lemma 73
3.4 The Shortest-Path Problem and Its Dual 75
3.5 Dual Information in the Tableau 79
3.6 The Dual Simplex Algorithm 80
3.7 Interpretation of the Dual Simplex Algorithm 82
Problems 85
Notes and References 86

Chapter 4 COMPUTATIONAL CONSIDERATIONS FOR THE SIMPLEX ALGORITHM 88

4.1 The Revised Simplex Algorithm 88
4.2 Computational Implications of the Revised Simplex Algorithm 90
4.3 The Max-Flow Problem and Its Solution by the Revised Method 91
4.4 Dantzig-Wolfe Decomposition 97
Problems 102
Notes and References 103

Chapter 5 THE PRIMAL-DUAL ALGORITHM 104

5.1 Introduction 104
5.2 The Primal-Dual Algorithm 105
5.3 Comments on the Primal-Dual Algorithm 108
5.4 The Primal-Dual Method Applied to the Shortest-Path Problem 109
5.5 Comments on Methodology 113
5.6 The Primal-Dual Method Applied to Max-Flow 114
Problems 115
Notes and References 116

Chapter 6 PRIMAL-DUAL ALGORITHMS FOR MAX-FLOW AND SHORTEST PATH: FORD-FULKERSON AND DIJKSTRA 117

6.1 The Max-Flow, Min-Cut Theorem 117
6.2 The Ford and Fulkerson Labeling Algorithm 120
6.3 The Question of Finiteness of the Labeling Algorithm 124
6.4 Dijkstra's Algorithm 128
6.5 The Floyd-Warshall Algorithm 129
Problems 134
Notes and References 135

Chapter 7 PRIMAL-DUAL ALGORITHMS FOR MIN-COST FLOW 137

7.1 The Min-Cost Flow Problem 137
7.2 Combinatorializing the Capacities—Algorithm Cycle 138
7.3 Combinatorializing the Cost—Algorithm Buildup 141
7.4 An Explicit Primal-Dual Algorithm for the Hitchcock Problem—Algorithm Alphabeta 143
7.5 A Transformation of Min-Cost Flow to Hitchcock 148
7.6 Conclusion 150
Problems 151
Notes and References 152

Chapter 8 ALGORITHMS AND COMPLEXITY 156

8.1 Computability 156
8.2 Time Bounds 157
8.3 The Size of an Instance 159

8.4 Analysis of Algorithms 162
8.5 Polynomial-Time Algorithms 163
8.6 Simplex Is not a Polynomial-Time Algorithm 166
8.7 The Ellipsoid Algorithm 170
8.7.1 LP, LI, and LSI 170
8.7.2 Affine Transformations and Ellipsoids 174
8.7.3 The Algorithm 176
8.7.4 Arithmetic Precision 182
Problems 185
Notes and References 190

Chapter 9 EFFICIENT ALGORITHMS FOR THE MAX-FLOW PROBLEM 193

9.1 Graph Search 194
9.2 What Is Wrong with the Labeling Algorithm 200
9.3 Network Labeling and Digraph Search 202
9.4 An $O(|V|^3)$ Max-Flow Algorithm 206
9.5 The Case of Unit Capacities 212
Problems 214
Notes and References 216

Chapter 10 ALGORITHMS FOR MATCHING 218

10.1 The Matching Problem 219
10.2 A Bipartite Matching Algorithm 221
10.3 Bipartite Matching and Network Flow 225
10.4 Nonbipartite Matching: Blossoms 226
10.5 Nonbipartite Matching: An Algorithm 234
Problems 243
Notes and References 245

Chapter 11 WEIGHTED MATCHING 247

11.1 Introduction 247
11.2 The Hungarian Method for the Assignment Problem 248
11.3 The Nonbipartite Weighted Matching Problem 255
11.4 Conclusions 266
Problems 267
Notes and References 269

Chapter 12 SPANNING TREES AND MATROIDS 271

12.1 The Minimum Spanning Tree Problem 271
12.2 An $O(|E| \log |V|)$ Algorithm for the Minimum Spanning Tree Problem 274
12.3 The Greedy Algorithm 278
12.4 Matroids 280
12.5 The Intersection of Two Matroids 289
12.6 On Certain Extensions of the Matroid Intersection Problem 298
12.6.1 Weighted Matroid Intersection 298
12.6.2 Matroid Parity 299
12.6.3 The Intersection of Three Matroids 300
Problems 301
Notes and References 305

Chapter 13 INTEGER LINEAR PROGRAMMING 307

13.1 Introduction 307
13.2 Total Unimodularity 316
13.3 Upper Bounds for Solutions of ILP's 318
Problems 323
Notes and References 324

Chapter 14 A CUTTING-PLANE ALGORITHM FOR INTEGER LINEAR PROGRAMS 326

14.1 Gomory Cuts 326
14.2 Lexicography 333
14.3 Finiteness of the Fractional Dual Algorithm 337
14.4 Other Cutting-Plane Algorithms 339
Problems 339
Notes and References 340

Chapter 15 NP-COMPLETE PROBLEMS 342

15.1 Introduction 342
15.2 An Optimization Problem Is Three Problems 343
15.3 The Classes *P* and *NP* 347

15.4 Polynomial-Time Reductions 351
15.5 Cook's Theorem 353
15.6 Some Other *NP*-Complete Problems: Clique and the TSP 358
15.7 More *NP*-Complete Problems: Matching, Covering, and Partitioning 371
Problems 377
Notes and References 380

Chapter 16 MORE ABOUT NP-COMPLETENESS 383

16.1 The Class co-*NP* 383
16.2 Pseudo-Polynomial Algorithms and "Strong" *NP*-Completeness 387
16.3 Special Cases and Generalizations of *NP*-Complete Problems 391
16.3.1 *NP*-Completeness by Restriction 391
16.3.2 Easy Special Cases of *NP*-Complete Problems 392
16.3.3 Hard Special Cases of *NP*-Complete Problems 394
16.4 A Glossary of Related Concepts 395
16.4.1 Polynomial-Time Reductions 395
16.4.2 *NP*-Hard Problems 397
16.4.3 Nondeterministic Turing Machines 398
16.4.4 Polynomial-Space Complete Problems 399
16.5 Epilogue 400
Problems 402
Notes and References 404

Chapter 17 APPROXIMATION ALGORITHMS 406

17.1 Heuristics for Node Cover: An Example 406
17.2 Approximation Algorithms for the Traveling Salesman Problem 410
17.3 Approximation Schemes 419
17.4 Negative Results 427
Problems 430
Notes and References 431

Chapter 18 BRANCH-AND-BOUND AND DYNAMIC PROGRAMMING 433

18.1 Branch-and-Bound for Integer Linear Programming 433
18.2 Branch-and-Bound in a General Context 438
18.3 Dominance Relations 442
18.4 Branch-and-Bound Strategies 443
18.5 Application to a Flowshop Scheduling Problem 444
18.6 Dynamic Programming 448
Problems 451
Notes and References 452

Chapter 19 LOCAL SEARCH 454

19.1 Introduction 454
19.2 Problem 1: The TSP 455
19.3 Problem 2: Minimum-Cost Survivable Networks 456
19.4 Problem 3: Topology of Offshore Natural-Gas Pipeline Systems 462
19.5 Problem 4: Uniform Graph Partitioning 465
19.6 General Issues in Local Search 469
19.7 The Geometry of Local Search 471
19.8 An Example of a Large Minimal Exact Neighborhood 475
19.9 The Complexity of Exact Local Search for the TSP 477
Problems 481
Notes and References 484

INDEX 487
