<b>Acknowledgements</b>	<b>v</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Contributions of the thesis . . . . .	3
1.2 Overview of the thesis . . . . .	4
<b>2 Disruption Management in Passenger Railway Transportation</b>	<b>7</b>
2.1 Introduction . . . . .	7
2.2 Description of disruption management . . . . .	10
2.2.1 Organizations . . . . .	10
2.2.2 Actors . . . . .	12
2.2.3 Processes . . . . .	13
2.2.4 Organizational issues . . . . .	15
2.3 Timetable adjustments . . . . .	15
2.3.1 Problem description . . . . .	15
2.3.2 Larger disruptions . . . . .	16
2.4 Rolling stock rescheduling . . . . .	18
2.4.1 Problem description . . . . .	18
2.4.2 Current practice at NS . . . . .	20
2.4.3 New developments . . . . .	20
2.5 Crew rescheduling . . . . .	22
2.5.1 Problem description . . . . .	22
2.5.2 Current practice at NS . . . . .	25
2.6 Integrated Recovery . . . . .	26
2.7 Conclusions . . . . .	27
<b>3 Column Generation with Dynamic Duty Selection</b>	<b>29</b>
3.1 Introduction . . . . .	29
3.2 Literature review . . . . .	30
3.3 Mathematical model and solution approach . . . . .	31

3.4	Exploring the core problems . . . . .	34
3.4.1	Combining column generation and Lagrangian relaxation . . . . .	34
3.4.2	Pricing problems . . . . .	37
3.4.3	The column generation based heuristic . . . . .	38
3.5	Defining the core problems . . . . .	39
3.5.1	Initial core problem . . . . .	39
3.5.2	Neighborhoods for uncovered tasks . . . . .	40
3.6	Computational experiments . . . . .	41
3.6.1	Instances . . . . .	42
3.6.2	Results for initial core problems . . . . .	42
3.6.3	Results with neighborhood exploration . . . . .	45
3.7	Application: The Vleuten case . . . . .	48
3.8	Summary and conclusion . . . . .	49
<b>4</b>	<b>Computational Evaluation of Solution Approaches</b>	<b>51</b>
4.1	Introduction . . . . .	51
4.2	A heuristic mimicking the manual approach . . . . .	52
4.2.1	Phase 1: Repairing the infeasible duties . . . . .	54
4.2.2	Phase 2: Improving the crew schedule . . . . .	55
4.2.3	Computational results . . . . .	57
4.3	Dynamic constraint aggregation . . . . .	58
4.3.1	The mathematical model . . . . .	59
4.3.2	Outline of the DCA method . . . . .	60
4.3.3	The initial clusters . . . . .	61
4.3.4	The pricing problems . . . . .	63
4.3.5	Computational results . . . . .	64
4.4	Comparison . . . . .	68
4.5	Conclusion . . . . .	69
<b>5</b>	<b>Railway Crew Rescheduling with Retiming</b>	<b>73</b>
5.1	Introduction . . . . .	73
5.2	Problem description . . . . .	74
5.3	Literature review . . . . .	77
5.4	Mathematical formulation . . . . .	78
5.5	Solution approach . . . . .	82
5.5.1	Initial core problems and neighborhoods for uncovered tasks . . . . .	84
5.5.2	Core problems with retiming possibilities . . . . .	84
5.5.3	Exploring the core problems . . . . .	85
5.6	Computational results . . . . .	88

5.6.1	Parameter settings . . . . .	89
5.6.2	Cost parameters for the objective function . . . . .	89
5.6.3	Numerical results . . . . .	89
5.7	Conclusions and future research . . . . .	93
<b>6</b>	<b>Railway Crew Rescheduling under Uncertainty</b>	<b>95</b>
6.1	Introduction . . . . .	95
6.2	Problem description . . . . .	97
6.2.1	Optimization under uncertainty . . . . .	98
6.2.2	Related work . . . . .	99
6.3	Quasi robust optimization approaches . . . . .	99
6.3.1	Mathematical model . . . . .	100
6.3.2	Solution approach . . . . .	102
6.4	Numerical results . . . . .	106
6.5	Concluding remarks and future work . . . . .	108
<b>7</b>	<b>Summary and Concluding Remarks</b>	<b>111</b>
<b>A</b>	<b>Selected Topics in Combinatorial Optimization</b>	<b>115</b>
A.1	Selected combinatorial optimization problems . . . . .	115
A.1.1	Set partitioning/covering problem . . . . .	115
A.1.2	Multicommodity flow problem . . . . .	116
A.1.3	Shortest path problem with resource constraints . . . . .	117
A.2	Selected solution techniques . . . . .	118
A.2.1	Column Generation . . . . .	118
A.2.2	Lagrangian relaxation . . . . .	119
