

CONTENTS

Preface	<i>ix</i>
1 INTRODUCTION	1
1.1 The Nuclear World—An Historical View	3
1.2 The Contents	8
2 UNITS AND GENERAL SCALE OF RADIATION DAMAGE	10
2.1 Roentgen	10
2.2 Rad	11
2.3 Gray	11
2.4 Dose Threshold for Various Materials	12
References	16
Problems	16
3 FUNDAMENTAL INTERACTIONS OF NEUTRONS WITH MATERIALS	17
3.1 Neutron Interaction Theory	17
3.2 Frenkel Pair Formation	34
3.3 Activation and Transmutation	44
References	53
Problems	54
4 INTERACTIONS OF GAMMA RAYS WITH MATERIALS	56
4.1 What Is a Gamma Ray?	56
4.2 Sources of Gamma Rays in a Reactor	58
4.3 The Process Involved in the Interaction of Gamma Rays with Materials	59
4.4 Gamma Heating	63
4.5 Relationship between Gamma Flux and Dose Rate	70
4.6 Free Electron Generation	72
References	74
Problems	74
5 TRANSIENT EFFECTS OF RADIATION ON ELECTRICAL COMPONENTS	76
5.1 Gamma-Induced Electron Emission from Surfaces	76
5.2 Direct Ionization of Residual Gases by Gamma Radiation	87

5.3	Production of High-Energy Electrons by Thermal Neutron Reactions	89
5.4	Effects of Gamma Radiation on Electrical Resistances and Insulators (Photoconductivity)	90
5.5	Experimental Illustration of Gamma and Neutron Effects on Electrical Components	96
5.6	Conclusions on the Transient Effects of Radiation on Electrical Components	99
	References	101
	Problems	103
6	EFFECTS OF RADIATION ON ORGANIC MATERIALS	104
6.1	Radiation Effects on Organic Insulating Materials	106
6.2	Radiation-Induced Gas Evolution	108
6.3	Effects on Electrical Capacitors	112
6.4	Effects of Radiation on Epoxies	112
	References	117
	Problems	119
7	RADIATION EFFECTS ON STEEL	119
7.1	Radiation Effects on Strengths of Stainless Steel	119
7.2	Radiation Effects on Light Water Reactor (LWR) Pressure Vessels	180
	References	191
	Problems	199
8	NUCLEAR FISSION EFFECTS	201
8.1	The Fission Process	201
8.2	Effects in Reactor Fuel Elements	216
	References	232
	Problems	234
9	SURFACE EFFECTS OF NUCLEAR RADIATIONS	235
9.1	Fast Neutron Erosion	235
9.2	Secondary Electron Emission from Charged Nuclear Particles	240
9.3	Gamma-Induced Electron Emission	242
9.4	Gamma Radiation-Induced Outgassing (GRIO)	242
	References	255
	Problems	258
10	MISCELLANEOUS RADIATION EFFECTS	259
10.1	Welding Plastics	259
10.2	Gamma Sterilization of Plastic Medical Supplies	264
10.3	Improving Vacuum Levels with Gamma Radiation	265
10.4	Use of GRIO to Measure Effective Catalyst Surface Area	266

10.5	Other Miscellaneous Radiation Effects	267
	References	268
11	RADIATION EFFECTS ON BIOLOGICAL MATERIAL	270
11.1	Biological Damage	270
11.2	Biological Radiation Units	278
11.3	Radiation Protection Standards	282
11.4	Exposure Calculations	287
	References	301
	Problems	303
12	NEUTRON AND GAMMA RAY DOSIMETRY	305
12.1	Neutron Dosimetry	305
12.2	Gamma Ray Dosimetry	316
12.3	Health Physics Dosimetry	326
	References	330
	Problems	331
	APPENDIX A: NUCLEAR DATA FOR VARIOUS ELEMENTS AND ISOTOPES	332
	APPENDIX B: DERIVATION OF THE FRACTION OF ALL BETAS ESCAPING FROM THE SURFACE	334
	APPENDIX C: VARIOUS CONSTANTS	336
	APPENDIX D: USEFUL CONVERSION FACTORS	337
	Index	339
