

Contents

Section I.

Recognition

Chapter 1 **Host Specificity in *Rhizobium*-Legume Interactions** F. B. Dazzo and A. E. Gardiol, East Lansing, Mich., U. S. A.

- I. Introduction 3
- II. The Infection Process 4
- III. The Lectin Recognition Hypothesis 5
- IV. Bacterial Attachment to Legume Root Hairs as an Early Recognition Step 9
- V. Role of Legume Lectins in Attachment of Rhizobia 10
- VI. There Are Multiple Lectin Receptors on *Rhizobium* 15
- VII. Regulation of Lectin-*Rhizobium* Interactions 15
- VIII. Rhizobial Attachment Is Only a Piece of the Puzzle in the Infection Process 20
- IX. Nodulation and Host Specificity Genes Are Plasmid Encoded 23
- X. Concluding Remarks 24
- XI. References 25

Chapter 2 **Interaction of *Agrobacterium tumefaciens* with the Plant Cell Surface** A. Matthyse, Chapel Hill, N. C., U.S.A.

- I. Introduction 33
- II. Evidence that Bacterial Attachment Is Required for Tumor Formation 34
- III. Methods Used to Assay Attachment of *Agrobacterium* to Plant Cells 35
 - A. Indirect Methods 35
 - B. Direct Assays 36
- IV. General Requirements for Attachment of *A. tumefaciens* 37
- V. Plant Receptors for the Attachment of *A. tumefaciens* 39
 - A. The Nature of the Receptor 39
 - B. Plant Host Range for Attachment of *A. tumefaciens* 44
- VI. Binding Sites of *Agrobacterium tumefaciens* for Attachment to Plant Cells 45
 - A. The Role of the Bacterium in the Attachment Interaction 45
 - B. The Nature of the Bacterial Binding Site 46

- C. The Role of Bacterial Cellulose Fibrils in the Attachment of *A. tumefaciens* 46
- D. The Genetics of Attachment of *A. tumefaciens* 49
- VII. A Model for the Attachment of *A. tumefaciens* to Plant Cells 51
- VIII. References 52

Section II.

Symbiosis

Chapter 3 **Legume-*Rhizobium*-Symbiosis: Host's Point of View** D. P. S. Verma and K. Nadler, Montreal, Canada

- I. Introduction 58
- II. Origin of Symbiotic Nitrogen-Fixing Association 59
 - A. *Rhizobium* as an Organelle 59
 - B. Why Primarily Legumes? 60
- III. Role of the Host Plant in Symbiosis 61
 - A. Early Responses of Host 62
 - B. Controlled Invasion as a Means for Regulating Host Defense Response 62
 - C. Phytohormones 66
 - i) Action at Distance 66
 - ii) Phytohormones Produced by *Rhizobium* 67
 - D. Cell and Tissue Level Organization 68
 - E. Nutritional Role of the Plant Host 69
 - i) Carbohydrate Supply 69
 - ii) Nitrogen Metabolism 70
 - iii) Exchange of Other Nutrients 71
- IV. Plant Genes Involved in Symbiosis 72
 - A. Genetics 72
 - B. Molecular Studies 72
 - i) Leghemoglobin 73
 - ii) Discovery and Function of Nodulins 79
- V. Summary and Perspectives 83
- VI. References 84

Chapter 4 ***Rhizobium*-Leguminosae Symbiosis: The Bacterial Point of View** B. G. Rolfe and J. Shine, Canberra City, Australia

- I. Introduction 95
- II. Strategies of Infection 96
- III. Localization of Infectible Root Cells 103
- IV. Genetic Approach to the Analysis of Symbiosis 104
- V. Isolation and Cloning of Symbiotic Mutants 105

- VI. *Rhizobium* Sym(biosis) Plasmids 106
- VII. Chromosomal Location of Nitrogenase and Nodulation Genes 109
- VIII. Analysis of Host Specificity 112
- IX. Role of the Bacterial Cell Surface 116
- X. Future Studies 119
- XI. References 121

**Chapter 5 Nitrogen Assimilation in the Legume-*Rhizobium* Symbiosis:
A Joint Endeavour**

B. J. Mifflin and J. Cullimore, Harpenden, Herts, U. K.

- I. Introduction 129
- II. Rhizobial Metabolism 131
 - A. Nitrogenase 131
 - B. Ammonia Assimilation in Free-living Rhizobia 133
 - C. Regulatory Controls on Ammonia Assimilation 135
 - D. Nitrogen Metabolism in Rhizobia Under Symbiotic Conditions 144
 - E. Summary 146
- III. Plant Metabolism 148
 - A. Ammonia Assimilation 148
 - B. Synthesis of Nitrogenous Transport Compounds 153
 - C. Plant Genes Involved in Nodule Nitrogen Metabolism 162
- IV. Conclusions 164
- V. References 165

**Chapter 6 Hydrogenase and Energy Efficiency in Nitrogen Fixing
Symbionts**

N. J. Brewin, Norwich, U. K.

- I. Hydrogenase — A Suitable Candidate for Genetic Manipulation? 179
- II. Hydrogen Evolution by Nitrogenase 180
- III. Hydrogen Loss by Root Nodules 183
- IV. Occurrence of Uptake Hydrogenase in *Rhizobium* 186
- V. Potential Benefits Associated with Uptake Hydrogenase 187
- VI. Relationships Between Hydrogenase Determinants, Plasmids and Other Symbiotic Genes 190
- VII. Biochemical Components of the Hydrogenase System 191
- VIII. Genetic Components of the Hydrogenase System 193
- IX. Cloning the Hydrogenase Genes 194
- X. Problems of Gene Stability and Gene Expression for a Cloned *hup* System 195
- XI. Conclusions 197
- XII. References 197

Chapter 7 Symbiotic Relationships in Actinorhizae
 A. Moiroud and V. Gianinazzi-Pearson, Villeurbanne and
 Dijon, France

- I. Introduction 205
- II. The Symbiotic Association 207
 - A. The Host Plant 207
 - B. The Endophyte 208
 - C. Host Plant-Endophyte Specificity 210
 - D. Host Plant-Endophyte Interactions 211
- III. Nitrogen Fixation 215
- IV. Conclusions 216
- V. References 217

Chapter 8 Host-Fungus Specificity, Recognition and Compatibility in Mycorrhizae
 V. Gianinazzi-Pearson, Dijon, France

- I. Introduction 225
- II. Plant-Fungus Specificity 228
- III. Host-Fungus Interactions 231
 - A. Rhizosphere Environment 232
 - B. Recognition Phenomena 232
 - i) Ectomycorrhizae 235
 - ii) Ectendomycorrhizae 236
 - iii) Endomycorrhizae 237
 - C. Interactions of Mycorrhizal Fungi with Non-Host Plants 241
- IV. Functional Compatibility 242
- V. References 245

Chapter 9 Molecular Biology of Stem Nodulation
 R. P. Legocki and A. A. Szalay, Ithaca, N. Y., U. S. A.

- I. Introduction 255
- II. Occurrence of Stem-Nodulating Legumes 256
- III. Structure of Stem Nodules 258
- IV. Host-Specificity and Physiology of Stem Nodulation in *Aeschynomene* 259
- V. Identification of Stem and Root Leghemoglobins of *Aeschynomene* 261
- VI. Characterization of Stem *Rhizobia* 263
- VII. Genetic Manipulation of Stem *Rhizobium* 264
- VIII. Future Outlook 265
- IX. References 266

Section III.

Plant Tumor Induction**Chapter 10 Induction of Cell Proliferation by *Agrobacterium tumefaciens* and *A. Rhizogenes*: A Parasite's Point of View**

J. Tempé, A. Petit, S. K. Farrand, Orsay, France

- I. Introduction 271
- II. Crown Gall Tumor Cell Phenotypes 273
- III. Plasmid Logic and Crown Gall Cell Phenotype 275
- IV. Mechanism Underlying the Opine Concept 277
- V. Further Extensions of the Opine Concept 281
- VI. Conclusion 282
- VII. References 282

Chapter 11 Gene Organization of the Ti-PlasmidJ. Hille, A. Hoekema, P. Hooykaas and R. Schilperoort,
Leiden, The Netherlands

- I. Introduction 287
 - A. Crown Gall 287
 - B. *Agrobacterium tumefaciens* 288
 - C. Ti-Plasmids 288
- II. Molecular Genetics of Ti-Plasmids 290
 - A. DNA Homology Among Ti-Plasmids 290
 - B. Genetic Map of a Ti-Plasmid 291
 - C. Catabolic Functions and Conjugative Transfer 293
 - D. Replication and Incompatibility 294
 - E. The T-Region 295
 - F. The Vir-Region 298
- III. General Conclusion 302
- IV. References 303

Chapter 12 Phytohormone-Mediated Tumorigenesis by Plant Pathogenic Bacteria

C. I. Kado, Davis, Calif., U. S. A.

- I. Introduction 311
- II. Crown Gall 312
 - A. IAA Synthesis in Crown-Gall Tumor Cells 312
 - B. IAA Synthesis by *A. tumefaciens* 318
 - C. Cytokinin Synthesis in Crown Gall Tumors 320
 - D. Cytokinin Synthesis by *A. tumefaciens* 324
 - E. A Mechanism for the Role of IAA and Cytokinin in Crown Gall Formation 325
- III. Olive Knot 326

- IV. Fasciation and Witches' Broom 328
- V. Concluding Remarks 329
- VI. References 330

Section IV.

*Plant Pathogens and Defence Mechanisms***Chapter 13 Genetic and Biochemical Basis of Virulence in Plant Pathogens**

N. J. Panopoulos, J. D. Walton, D. K. Willis, Berkeley, Calif., and Ithaca, N. Y., U. S. A.

- I. Introduction 339
- II. Genetic Control of Host-Pathogen Interactions 340
 - A. The Gene-for-Gene Hypothesis for Race/Cultivar Specificity 340
 - B. Genetic Analysis in Other Systems 343
- III. Toxins as Virulence Factors 348
- IV. Cutinases and Pectinases 353
 - V. Extracellular Macromolecules Implicated in Vascular Wilts 356
- VI. Hypersensitive Reaction, Phytoalexins, and Inhibitor Detoxification 357
- VII. Summary 362
- VIII. References 362

Chapter 14 Defense Responses of Plants

C. A. Ryan, Pullman, Wash., U. S. A.

- I. Introduction 375
- II. Phytoalexin Induction 377
- III. Proteinase Inhibitor Induction 380
- IV. Molecular Cloning and Characterization of Proteinase Inhibitor Genes 382
 - V. Summary 383
- VI. References 384

Subject Index 387
