

Contents

Chapter One – What is an AGV system?	1
Types of vehicles and applications	3
Historical development	9
Chapter Two – Why use AGVs?	13
Advantages and justifications	13
Disadvantages and limitations	17
Chapter Three – AGV system components	21
Vehicles	21
Guidepath and guidance systems	33
Floor and system controls	36
Chapter Four – Vehicle types	41
Unit load carriers	41
Driverless tractors/trains	46
Fork-style carriers	49
Chapter Five – Control considerations	57
Objectives and philosophies	57
Specification considerations	60
Back-up considerations	61
Software	64
AGV controls	64
Methods of programming/control	65

Chapter Six – Guidance and communications	69
Guidepath techniques	69
Communication techniques	74
Guidepath layout considerations	78
Chapter Seven – Economic considerations	81
Economic factors	81
Example justification	84
Chapter Eight – System simulation	87
Why and when to use simulation	88
System input design variables	91
Resulting information	93
Simulation languages	95
Future trends	98
Chapter Nine – System specification	101
Vehicle specifications	102
Facility control function specifications	104
Software development and documentation	107
Chapter Ten – System implementation	109
Implementation considerations	109
Chapter Eleven – Overhead AGV systems	117
System components	117
Advantages and disadvantages	121
Installation examples	123
Electric track vehicles	124
Chapter Twelve – AGVs in material handling	129
Special considerations	129
Case studies	
GM-BOC – Willow Run Plant	135
GM-BOC – Orion Plant	139
GM-CPC – Bay City Plant	141
Steelcase – Kentwood Physical Distribution Center	145

Chapter Thirteen – AGVs in assembly	149
Special considerations	149
Case studies	
GM-BOC Lansing – chassis and engine merge	153
GM-BOC Lansing – engine dress	156
GM of Canada Oshawa – rear axle assembly	160
Chapter Fourteen – AGVs in electronics manufacturing	163
Special considerations	163
Case studies	
Magnetic Peripherals, Inc. (Twin Cities Division)	166
Intel Corporation	170
Printed wire board test facility	173
Radio and analogue products	175
Printed wire board production and test area	177
Robotic vehicles in semiconductor processing	179
Chapter Fifteen – AGVs in FMS	185
Special considerations	186
Case studies	
LTV Aerospace and Defense Company – Vought Aero Products Division	188
Volvo Components Corporation – Engine Division	192
Chapter Sixteen – AGVs in non-manufacturing applications	197
Special considerations	197
Case studies	
University of Michigan replacement hospital programme	198
Community Hospital laboratory specimen carrier	202
Leopoldina Hospital's Transcar System	203
Zale Corporation's Transcar System	205
Signode Corporation's Mailmobile	207
Westinghouse Furniture System Headquarters	209
AGVs in the US Postal Service	212

Chapter Seventeen – Heavy duty applications for AGVs	219
Potential applications	219
Special considerations	221
Case studies	
Ford Motor Company – Maumee Stamping Plant	223
Manufacturing rocket fuel	224
GM-BOC – Kalamazoo	225
Robotic application	226
Chapter Eighteen – Future trends	229
Indicated trends	229
References	235
