Contents

1 The Function of Telecommunications 1

1.1 Types of Communication 1
1.2 Information Types and Signals 1
1.3 Systems for Interactive Communication 3
1.4 Conventional Communication Networks and Services 4
1.5 Integration of Services 5
1.6 The Integrated Services Digital Network ISDN 6
1.7 Integration of Services with Higher Bit Rates 8
1.8 The Communication Network of the Future 8

2 Telecommunication Services 11

2.1 Definition of Services 11
2.2 Definition of Service Attributes and Supplementary Services 16
2.3 Services in the ISDN with Bit Rates up to 64 kbit/s 17
2.3.1 ISDN Services up to 64 kbit/s via B-Channels 19
2.3.1.1 Conversational Bearer Services 19
2.3.1.2 Conversational Teleservices 19
2.3.1.3 Messaging Services 21
2.3.1.4 Retrieval Services (Teleservices) 21
2.3.1.5 Distribution Services 22
2.3.2 ISDN Services via the D-Channel 22
2.3.2.1 Conversational Bearer Services with Low Throughput . 22
2.3.2.2 Conversational Teleservices 22
2.3.3 Supplementary Services 22
2.3.4 Existing Services from the Telephone Network in the ISDN . . 26
2.3.5 Services in Conjunction with Terminals from Dedicated Text and Data Networks 27
2.4 Service Conversion and Network Interworking Facilities 28
2.4.1 Service Conversion within the ISDN 29
2.4.2 Service Conversions in Conjunction with Network Interworking Facilities 29
2.5 Services with Higher Bit Rates 29

3 ISDN Structure 31

3.1 Network Organization 31

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.2 Initial Situation for the ISDN 32
3.2.1 Telephone Network 32
3.2.2 Text and Data Networks 35
3.3 Functions of the ISDN Network Components 36
3.3.1 Subscriber Lines in the ISDN 36
3.3.2 Local Exchanges in the ISDN 36
3.3.3 Signaling Between ISDN Exchanges 37
3.3.4 Assignment of ISDN Supplementary Services 37
3.3.5 Operation and Maintenance in the ISDN 37
3.4 Network Dimensioning 38
3.4.1 Basic Considerations 38
3.4.2 Effects of Service Integration 39
3.4.2.1 Holding Time, Traffic Intensity, Busy Hour Call Attempts 39
3.4.2.2 Shared Use of the Network Equipment 41
3.4.3 Traffic Routing 42
3.5 Interworking with Other Public Networks 43
3.5.1 ISDN and the Analog Telephone Network 43
3.5.2 ISDN and Public Data Networks 44
3.6 Interworking with Private Networks 45
3.6.1 ISDN Private Branch Exchanges 45
3.6.2 Local Area Networks 45
3.7 Numbering 46
3.8 Implementation Strategies 47
3.8.1 Overlay Network and Cell Approach 48
3.8.2 Pragmatic Implementation Strategy 49
3.8.3 Satellite Links in the ISDN 51
3.9 ISDN Implementation Schedules 52

4 Subscriber Access 54

4.1 Configuration of the User Station 54
4.1.1 Functional Groups of the User Station 54
4.1.2 Network Termination NT1 56
4.1.3 Network Termination NT2 57
4.1.4 Terminal Adaptor TA 58
4.1.5 Connecting Private Networks 59
4.2 User-Network Interfaces 60
4.2.1 Preliminary Remarks 60
4.2.1.1 Channel Types 61
4.2.1.2 Access Types and Interface Structures 63
4.2.1.3 Operation of Traffic Channels 65
4.2.2 User-Network Interface for the Basic Access 65
4.2.2.1 Reference Configurations 65
4.2.2.2 Electrical Characteristics for Information Transmission . 68
4.2.2.3 D-Channel Access by Terminal Equipments 69

4.2.2.4 Frame Structure 70
4.2.2.5 Activation and Deactivation 72
4.2.2.6 Electrical Characteristics for Power Feeding 73
4.2.3 User-Network Interface for the Primary Rate Access 74
4.3 User Signaling 76
4.3.1 Protocol Architecture 77
4.3.2 Types of Connection 78
4.3.3 Special Features of ISDN Signaling 80
4.3.3.1 Functions of the Network Terminations NT1 and NT2 . 80
4.3.3.2 Call Establishment 80
4.3.3.3 Bus Configurations 84
4.3.3.4 Simultaneous Signaling Activities 85
4.3.4 Link Access Procedure on the D-Channel 85
4.3.4.1 Features of the Data Link Layer 85
4.3.4.2 Data Transfer Protocol 86
4.3.4.3 Assignment of Unique Terminal Endpoint Identifiers . 88
4.3.5 Signaling for Circuit-Switched Connections 89
4.3.5.1 Simple Call Establishment 89
4.3.5.2 Simple Call Clearing 90
4.3.5.3 Refined Call Establishment and Clearing 91
4.3.5.4 Control of Supplementary Services 92
4.3.5.5 User-User Signaling 92
4.3.5.6 Stimulus Protocol 92
4.4 Connection of Terminals with Conventional Interfaces to the ISDN . 97
4.4.1 ISDN Bearer Service and Public Data Network Access Solutions 99
4.4.2 Connection of X.21 Terminal Equipment with Single-Step Call Establishment 102
4.4.2.1 Mapping of the Call Establishment and Clearing Procedures Between the X.21 and S Interfaces 102
4.4.2.2 Adaption Between the X.1 User Rates of X.21 Terminal Equipment and the ISDN Information Transfer Rate of 64 kbit/s 102
4.4.2.3 Ready for Data Alignment in the 64 kbit/s Channel Between the Terminal Adaptors and Between the X.21 Terminal Equipments 104
4.4.3 Connection of Data Terminal Equipment with V.-Series Type Interfaces to the ISDN 106
4.4.3.1 Support of the Analog Tip/Ring Interface in the ISDN . 106
4.4.3.2 Support of V.-Series Interfaces in the ISDN 106
4.4.4 Connection of Terminals with X.25 Interface to the ISDN . . . 107
4.4.4.1 Basic Characteristics 107
4.4.4.2 Point-to-Multipoint Signaling for Incoming Virtual Calls 112
4.4.4.3 Access to Packet Switching via the B-Channel 112
4.4.4.4 Access to Packet Switching via the Signaling Channel (D-channel) 116
4.5 Additional Packet Switching Techniques in ISDN 118

5 ISDN Terminals 125

5.1 Preliminary Remarks 125
5.2 Basic Features of an ISDN Terminal 126
5.3 Single-Service Terminals Connected to the ISDN 128
5.3.1 ISDN Telephone 128
5.3.2 Terminals for Non-Voice Communication in the ISDN 130
5.4 Multiservice Terminals 132

6 Switching in the ISDN 134

6.1 Introduction 134
6.2 New Demands Placed on Switching Due to Service Integration in the ISDN 143
6.2.1 Subscriber Access 143
6.2.2 Trunk Access 146
6.2.3 Switching Network 146
6.2.4 User-Network Signaling 148
6.2.5 Control 151
6.2.6 Interexchange Signaling 152
6.2.7 Operations, Administration and Maintenance 152
6.2.8 Timing and Network Synchronization 153
6.2.9 Interworking and Access to Special Equipment 153
6.3 Interexchange Signaling in the ISDN 154
6.3.1 Basic Characteristics of Interexchange Signaling Using CCITT Signaling System No. 7 154
6.3.2 The Message Transfer Part (MTP) 157
6.3.3 Signaling Relations Between ISDN Exchanges 157
6.3.4 Protocol Architecture of ISDN Interexchange Signaling 161
6.3.5 Implementation of ISDN Interexchange Signaling in the Exchange 164
6.3.6 Example for ISDN Interexchange Signaling: In-Call Modification 164
6.3.7 Communication Between ISDN Exchanges and Network Data Bases via CCITT Signaling System No. 7 166
6.4 Corporate ISDN Networks 169
6.4.1 Fundamental Solutions 169
6.4.2 Structure and Features of an ISDN PABX 170
6.4.3 Tie Line Traffic Between ISDN PABXs 175

7 Transmission Methods in the ISDN 179

7.1 Introductory Remarks 179
7.2 The Hierarchy of Ditigal Transmission Channels 179
7.2.1 Basic Building Block: 64 kbit/s 179
7.2.2 Overview of the Digital Multiplex Hierarchies 181
7.2.3 Primary Multiplex Signals 183
7.2.4 Higher Bit-Rate Signals 184

7.3 Transmission Media 184
7.3.1 Conductors in Cables 184
7.3.2 Radio Relay 187
7.4 Equipment for Transmitting Digital Signals on Cable and Radio Links 188
7.4.1 General 188
7.4.2 Transmission on Cables in Trunk Circuits 189
7.4.3 Transmission of Subscriber Lines 192
7.4.4 Radio Relay Transmission 197
7.5 Multiplexed Signals and Multiplexing Equipment 197
7.5.1 Synchronous Multiplexed Signals 197
7.5.2 Digital Multiplexers 198
7.6 Network Synchronization 199
7.6.1 Necessity for Network Synchronization 199
7.6.2 Achieving Network Synchronization 200
7.6.3 Clock Supply Requirements 201
7.7 Disturbances and Transmission Performance 203
7.7.1 Effect of Bit Errors 203
7.7.2 Effect of Slips 205
7.7.3 Effect of Signal Delay 206
7.7.4 Effect of Jitter and Wander 206
7.7.5 Connection Types in the ISDN 207

8 ISDN – The User's View 209

8.1 ISDN in the Office 209
8.1.1 Telephone Communication 209
8.1.2 Non-Voice Communication 210
8.1.2.1 Significance of Service Integration 210
8.1.2.2 Transmission Speed 211
8.1.2.3 Message Structure 212
8.2 ISDN in the Home 213
8.3 ISDN in Mobile Communication 216

Annex: CCITT Recommendations and Other Standards Relating to the ISDN . 218
