Table of Contents

Preface xvii

1. What Is Knowledge Representation? 1

1.1. Introduction 2
1.2. Logic representations 4
1.2.1. Default logic 7
1.2.2. Fuzzy logic 8
1.3. Semantic networks 8
1.3.1. Partitioned networks 12
1.3.2. Marker propagation schemes 14
1.3.3. Topic hierarchies 16
1.3.4. Propositional networks 19
1.3.5. Semantic networks and logic 20
1.4. Procedural representations 21
1.4.1. Winograd's work 21
1.4.2. Procedural semantic networks 24
1.5. Logic programming 26
1.6. Frame-based representations 28
1.7. Production system architectures 33
1.8. Knowledge representation languages 36
1.8.1. KL-One 36
1.8.2. KRYPTON 40
1.8.3. Other languages 41
1.9. Concluding remarks 41

2. Knowledge Representation: What's Important About It? 44

2.1. Introduction 45
2.2. Knowledge for reasoning agents 46
2.3. Modeling the external world 48
2.4. Perception and reasoning by machine 49
2.5. The Nature of the world and its models 52
2.6. The functions of a knowledge representation system 53
2.7. The knowledge acquisition problem 54
2.8. The perception problem 55

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.9. Planning to act 56
2.10. Role of a conceptual taxonomy for an intelligent agent 57
2.11. The structure of concepts 58
2.12. An example of a conceptual taxonomy 60
2.13. The need for taxonomic organization 61
2.14. Recognizing/analyzing/parsing situations 64
2.15. Two aspects of knowledge representation 65
2.16. Expressive adequacy 66
2.17. Notational efficacy 69
2.18. The relationship to formal logic 72
2.19. Concepts are more than predicates 74
2.20. Conclusions 77

3. Some Remarks on the Place of Logic in Knowledge Representation 80

3.1. Introduction 81
3.2. What is logic? 82
3.3. On being logical 85
3.4. Reasoning and logic 87
3.5. Nonmonotonic logic 88
3.6. Conclusion 91

4. Logic and Natural Language 92

4.1. Introduction 93
4.2. Default logic for computing presuppositions 93
4.3. Modal logic for planning utterances 97
4.4. Temporal logic for reasoning about futures 98
4.5. Conclusion 102

5. Commonsense and Fuzzy Logic 103

5.1. Introduction 104
5.2. Meaning representation in test-score semantics 106
5.3. Testing and translation rules 112
5.3.1. Composition of elastic constraints 115
5.4. Representation of dispositions 119
5.5. Reasoning with dispositions 129
5.6. Concluding remark 134

6. Basic Properties of Knowledge Base Systems 137
6.1. Introduction 138
6.2. Basic notions 139
6.3. Completeness & consistency of rule-represented knowledge bases 144
6.4. The case of linear sets of rules 150
6.5. Dependency of rules on attributes 154
6.6. Partial information and defaults 156
6.7. Conclusion 160
7. First Order Logic and Knowledge Representation: Some Problems of Incomplete Systems 161
7.1. Introduction 162
7.2. Prolog & Absys: declarative knowledge manipulation systems 164
7.3. Primitive goal selection strategies in Absys and Prolog 168
7.4. Selection strategies and knowledge systems 171
7.5. Summary 172
8. Admissible State Semantics for Representational Systems 174
8.1. Introduction - the problem of practical semantics 175
8.2. Internal and external meanings 176
8.3. Admissible state semantics 178
8.4. Example: semantic networks 180
8.5. Example: k-lines 184
8.6. Conclusion 185
9. Accelerating Deductive Inference: Special Methods for Taxonomies, Colours and Times 187
9.1. Introduction 188
9.2. Recognizing type relationships 190
9.3. Recognizing part-of relationships 198
9.4. Recognizing colour relationships 203
9.5. Recognizing time relationships 209
9.6. Combining general and special methods 215
9.7. Concluding remarks 219

10. Knowledge Organization and Its Role in Temporal and Causal Signal Understanding: The ALVEN and CAA Projects 221

10.1. Introduction 222
10.2. The representational scheme 222
10.2.1. Knowledge packages: classes 222
10.2.2. Knowledge organization 223
10.2.3. Multi-dimensional levels of detail 224
10.2.4. Time 225
10.2.5. Exceptions and similarity relations 228
10.2.6. Partial results and levels of description 231
10.3. The interpretation control structure 231
10.4. The ALVEN project 232
10.4.1. Overview 232
10.4.2. LV dynamics knowledge and its representation 236
10.5. The CAA project 242
10.5.1. Overview 242
10.5.2. Representation of causal connections 244
10.5.3. Use of causal links 245
10.5.4. Recent research related to causality 246
10.5.5. Representation of domain knowledge 247
10.5.6. Knowledge-base stratification and projection links 252
10.5.7. Recognition strategies and control 252
10.6. Conclusions 261

11. SNePS Considered as a Fully Intensional Propositional Semantic Network 262

11.1. Introduction 263
11.1.1. The SNePS environment 263
11.1.2. SNePS as a knowledge representation system 265
11.1.3. Informal description of SNePS 266
11.2. Intensional knowledge representation 267
11.3. Description of SNePS/CASSIE 272
11.3.1. CASSIE - A model of a mind 272

11.3.2. A conversation with CASSIE 273
11.3.3. Syntax and semantics of SNePS/CASSIE 275
11.3.4. The conversation with CASSIE, revisited 288
11.4. Extensions and applications of SNePS 295
11.4.1. SNePS as a database management system 295
11.4.2. Address recognition for mail sorting 298
11.4.3. NEUREX 300
11.4.4. Representing visual knowledge 301
11.4.5. SNeBR: A belief revision package 304
11.5. Knowledge-based natural language understanding 306
11.5.1. Temporal structure of narrative 308
11.6. Conclusion: SNePS and SNePS/CASSIE as Semantic Networks 311
11.6.1. Criteria for semantic networks 311
11.6.2. SNePS and SNePS/CASSIE vs. KL-One 313

12. Representing Virtual Knowledge Through Logic Programming 316

12.1. Introduction 317
12.2. Representing knowledge in Prolog 318
12.3. Asking for inferences - virtual knowledge 320
12.4. Representing problem-solving knowledge 323
12.5. Representing database knowledge 327
12.6. Limitations 329
12.7. Conclusions 329

13. Theorist: A Logical Reasoning System for Defaults and Diagnosis 331

13.1. Introduction 332
13.2. Prolog as a representation system 333
13.3. The Theorist framework 333
13.4. Tasks appropriate for the Theorist framework 335
13.4.1. Nonmonotonic reasoning - reasoning with default and generalised knowledge 335
13.4.2. Diagnosis 336
13.4.3. Learning as theory construction 341
13.4.4. User modelling as theory maintenance 342
13.4.5. Choices in mundane tasks 343

13.5. Representation and reasoning in theorist 344
13.5.1. Extending Horn clauses to full first order logic 345
13.5.2. Reasoning as the construction of consistent theories 345
13.6. Implementing a Theorist prototype in Prolog 347
13.6.1. Not parallelism 349
13.7. Status and conclusions 351

14. Representing and Solving Temporal Planning Problems 353

14.1. Introduction 355
14.2. The Time Map Manager 358
14.2.1. A Predicate Calculus Database 359
14.2.2. Adding Basic Concepts of Time 364
14.2.3. Events and Persistences 368
14.2.4. Temporal Database Queries 373
14.2.5. Chaining Rules in a Temporal Database 378
14.2.6. A Simple Planner Based on the TMM 382
14.3. The Heuristic Task Scheduler 390
14.3.1. Describing a Resource 392
14.3.2. Describing a Plan 396
14.3.3. Specifying Plan Resource Use 397
14.3.4. Specifying Plan Tasks 399
14.3.5. Specifying Plan Constraints 403
14.3.6. Producing a Completed Linear Task Ordering 406
14.4. Summary and Conclusions 409

15. Analogical Modes of Reasoning and Process Modelling 414

15.1. Introduction to analogical reasoning 415
15.2. WHISPER: A program using analogs 417
15.3. Observations on the use of analogs 421
15.4. Mental rotation as an analog process 423
15.5. Conclusions 428

16. Representing and Using Knowledge of the Visual World 429
16.1. Introduction 430
16.2. Progress in high-level vision 432
16.3. The complexity barrier 435
16.4. Achieving descriptive adequacy 438
16.5. Achieving procedural adequacy 446
16.6. Conclusion 448
17. On Representational Aspects of VLSI-CADT Systems 451
17.1. Introduction 452
17.2. VLSI design process 453
17.2.1. Use of multiple perspectives 454
17.2.2. Almost hierarchical design 456
17.2.3. Constraints and partial specifications 456
17.3. VLSI design knowledge 458
17.3.1. Knowledge about VLSI design 458
17.4. VLSI design representation 459
17.4.1. Representation of designed artifact 460
17.4.2. Design plan 461
17.5. Analysis, testing, and diagnosis of VLSI circuits 462
17.5.1. Reasoning with constraints 462
17.5.2. Qualitative analysis 463
17.5.3. Design for testability frames 464
17.5.4. Logic programming in VLSI design 465
17.5.5. Diagnostic reasoning 466
17.6. Natural language interfaces 466
17.7. Concluding remarks 469
Index 508
