

# CONTENTS

## **Chapter One – Arc welding with a refractory electrode in an inert atmosphere 1**

- General points 1
- Principles and use of the process 9
- Advantage of Tungsten Inert Gas (TIG) welding 9
- Choice of shielding gases 11
- Nature of welding current 17
- Tungsten electrodes 22
- Filler metals 28
- Characteristics of power source for welding with a refractory electrode 30
- Programming a TIG welding sequence 35
- Stabilisation, deviation and/or oscillation of the arc 38
- Regulation of arc voltage 41
- Elements of a TIG installation 45
- Preparation of parts for welding, jig and fixturing 49
- Application of hot wire TIG 53
- TIG welding with pulsing 59
- TIG welding of *ferrous metals* 77
- TIG welding of stainless and heat resisting steels 86
- TIG welding of aluminium and its alloys 90
- TIG welding of magnesium and its alloys 104
- TIG welding of copper and its alloys 105
- TIG welding of nickel and its alloys 109
- TIG welding of titanium and its alloys 111
- TIG welding of dissimilar metals 114
- Some examples of parameters in automatic TIG 115

## **Chapter Two – Plasma arc welding – Microplasma welding 121**

- Definition of plasma 122
- Different types of plasma arc 123
- Industrial uses of plasma processes 124

Plasma arc welding 128  
Microplasma welding 150  
Conclusions 157

**Chapter Three – Importance of the shielding gas in arc welding 159**

Properties of shielding gases 159  
Production and purity of shielding gases 162  
Behaviour of shielding gases during welding 164  
Shielding gases for TIG and plasma welding 170  
Shielding gases for MIG/MAG welding 177  
Flowmeter corrections 185  
Transport and storage of gases (primarily applicable to France) 188  
Comparison of application costs of shielding gases 195

**Chapter Four – Variants of fundamental processes 199**

New MAG process: MAGCI 200  
Improvement of the MAG process by the introduction of powdered flux with carbon dioxide 203  
MIG welding with two fine wires 204  
Plasma-MIG welding 205  
Stiffened TIG arc 210  
Dual shielded TIG 213  
Hot wire TIG welding with arc deflection 216  
Multicathode TIG 217  
Plasma-TIG welding 221  
Hot wire plasma arc 222

**Chapter Five – Laser welding 225**

Introduction 225  
Operating principles of lasers 228  
Laser technology 231  
Interactions of laser radiation with metals 238  
Use of laser beams for welding 240  
Emergence of the process 266  
Industrial applications (sources and systems) 268

**Chapter Six – Defects of fusion welded joints 281**

External or visible defects 281  
Internal defects 282  
Classification of defects with their numerical identification 292  
Defect avoidance in continuous arc welding 292

<b>Chapter Seven – Control of welded assemblies</b>	<b>307</b>
General points	307
Control before welding	309
Control during welding	310
Control after welding	310
Criteria for acceptance of welding defects for classes of joints	332
<b>Bibliography/Further Reading/References</b>	<b>357</b>
