

Contents

1.	Introduction	1
2.	The Technique of Free-flow Electrophoresis	5
2.1	Principle	5
2.2	Apparatus	6
2.3	Optimization	9
2.3.1	Zeta-Potential	11
2.3.2	Limiting Conditions	13
2.3.3	Buffers	13
3.	Preparative Electrophoresis of Cells	21
3.1	Animal Lymphocytes	21
3.2	Thymus-dependent Lymphocytes from Animals	24
3.3	Human Lymphocytes	26
3.4	Bone Marrow Cells	30
3.5	Monocytes	31
3.6	Polymorphonuclear Leukocytes	33
3.7	Erythrocytes	33
3.8	Human Blood Platelets	35
3.9	Spermatozoa	36
3.10	Kidney Cells	37
3.11	Tumor Cells	40
3.12	Cells from the Malaria Parasite	43
3.12.1	Sporozoites	44
3.12.2	Isolation of Exoerythrocytic Stages of <i>Plasmodium falciparum</i> , Removal of Erythrocyte Components from Free Parasites, Isolation of Merozoites	45
3.13	Bacterial Cells and Phages	47
4.	Preparative Electrophoresis of Cell Organelles and Membrane Systems	51
4.1	Isolation of Organelles and Their Membranes	51
4.1.1	Mitochondrial Outer Membranes, Mitoplasts and Submitochondrial Particles	51
4.1.2	Organelles and Membrane Domains Involved in Endocytosis, Intracellular Recycling and Intracellular Transport	53
4.1.2.1	Isolation of Surface Membrane Vesicles from Subpopulations of Polymorphonuclear Leukocytes	54
4.1.2.2	Coated Vesicles	55
4.1.2.3	Endosomes	55
4.1.2.4	Secondary Lysosomes	57
4.1.2.5	Cis- and Trans-cisternae from the Golgi Apparatus	58
4.1.2.6	Transition Vesicles	60

4.2	Membrane Fractions from Human and Animal Cells and from Bacteria	60
4.2.1	Membranes from Blood Platelets	60
4.2.2	Plasma Membrane Vesicles from Renal Tubular Epithelial Cells	61
4.2.3	Vesicles from Stomach Mucous Epithelial Cell Membrane	63
4.2.4	Plasma Membranes from Amphibian Epidermis	64
4.2.5	Membrane-DNA Complexes	64
4.2.6	Inside-out Vesicles	65
4.3	Membrane Fractions from Plant Cells	67
5.	Isolation and Purification of Soluble Components	71
5.1	Proteins	71
5.2	Enzymes	72
5.3	Nucleic Acids and Nucleotides	76
6.	The Use of Buffer Gradient Systems in Free-flow Electrophoresis	79
7.	Analytical and Clinical Applications of Free-flow Electrophoresis	85
7.1	Method	85
7.2	Cells	87
7.3	Serum Proteins	90
8.	The Application and Advantages of Free-flow Electrophoresis under Microgravity Conditions in Experiments in Space	93
8.1	Theoretical Considerations	93
8.2	Experiments under Microgravity Conditions	95
9.	The Future of Free-flow Electrophoresis	97
10.	References	99
11.	Index	117
