

Contents

Preface	v
1. On structures	1
2. On substitution and replacement	11
3. On functions and equality	17
4. On our proof format	21
5. The calculus of boolean structures	30
6. Some properties of predicate transformers	81
7. Semantics of straight-line programs	121
8. Equations in predicates and their extreme solutions	147
9. Semantics of repetitions	170
10. Operational considerations	190
11. Converse predicate transformers	201
12. The strongest postcondition	209
