Abstract	VII
1 Introduction	1
1.1 Towards an Internet-based Data Management	1
1.2 Decentralisation of Services	3
1.3 Contribution of Thesis	4
1.4 Outline of Thesis	5
2 State of the Art	7
2.1 Content Delivery Networks	7
2.2 P2P Systems for Content Distribution	11
2.3 Searching for Information	13
2.4 Evaluation of Search Results	18
2.4.1 Hubs and Authorities	18
2.4.2 PageRank	19
2.4.3 PageReputation	20
2.5 Coordination and Self-organisation	20
2.6 P2PNetSim	22
3 On Random Walkers	25
3.1 Random Walkers	25
3.1.1 Definition and Related Work	25
3.1.2 Population of Random Walkers	26
3.1.3 Ants	27
3.2 PageRank Calculation with Random Walks	31
3.2.1 General Principles	31
3.2.2 Estimation of Network Size	34
3.2.3 Convergence in Real Systems	37
3.2.4 Simulation Results	38
4 A Generalised Node Evaluation	43
4.1 Influence of Network Parameters	43
4.2 NodeRank: an Extension of PageRank	44
4.3 Simulation of NodeRank and its Properties	45

5	Evaluation of User Activities	48
5.1	Characterisation of User Activities	48
5.2	Measuring and Propagating Node Activities	50
5.2.1	General Remarks	50
5.2.2	Representation of Peer Activities	51
5.2.3	Identifying the Utilisation of Network Areas	52
5.3	Activity-based Clustering of Peers	61
5.3.1	Planar or Plane-embedded Environments	61
5.3.2	Generalisation of Clustering Method	65
5.4	Experimental Results	68
6	Application to Video-on-Demand Systems	74
6.1	Introduction	74
6.2	Probability Functions for Picking and Depositing Files	76
6.3	Calculation of Parameters	78
6.4	Performance Evaluation	79
7	Conclusion and Future Work	82
7.1	Contribution and Review of Results	82
7.2	Conclusion and Future Work	83
	Bibliography	85
