Part I Theory

1 Merging Mathematical and Physiological Knowledge: Dimensions and Challenges	3
Jerry J. Batzel, Mostafa Bachar, John M. Karemaker, and Franz Kappel	
1.1 Introduction	4
1.2 The Problem Setting	4
1.2.1 Conceptual Models	4
1.2.2 Mathematical Models	5
1.2.3 Interdisciplinary Research	7
1.2.4 Overcoming Barriers to Collaboration	7
1.3 Aspects of Parameter Estimation and Model Validation	8
1.3.1 Model Outputs and Measurements	9
1.3.2 Parameter Estimation, Least Squares Formulation	11
1.3.3 Sensitivity Analysis	12
1.3.4 Generalized Sensitivities	14
1.3.5 Experimental Design	16
1.4 Model Validation	17
1.5 A General Validation Protocol	18
References	19
2 Mathematical Modeling of Physiological Systems	21
Thomas Heldt, George C. Verghese, and Roger G. Mark	
2.1 Introduction	21
2.2 Simulation	23
2.3 Exploration of Hypotheses	26
2.4 Model Identification	31
2.4.1 Non-linear Least-Squares Estimation	32
2.4.2 Subset Selection	35
2.5 The Case for Structured Model-Order Reduction	37

2.6	Conclusions	38
	References	38
3	Parameter Selection Methods in Inverse Problem Formulation	43
	H.T. Banks, Ariel Cintrón-Arias, and Franz Kappel	
3.1	Introduction	44
3.2	Statistical Models for the Observation Process	45
3.3	Subset Selection Algorithm	49
3.4	Models	51
	3.4.1 A Mathematical Model for HIV Progression with Treatment Interruption	51
	3.4.2 A Model for the Reaction of the Cardiovascular System to an Ergometric Workload	55
3.5	Results and Discussion	58
	3.5.1 The HIV-Model	58
	3.5.2 The CVS-Model	65
3.6	Concluding Remarks	70
	References	70
4	Application of the Unscented Kalman Filtering to Parameter Estimation	75
	Adam Attarian, Jerry J. Batzel, Brett Matzuka, and Hien Tran	
4.1	Introduction	76
4.2	The Unscented Kalman Filter	78
4.3	Parameter Estimation	82
	4.3.1 Dual Estimation	83
4.4	Estimation Examples	84
	4.4.1 A Hard Nonlinear Spring Model	84
	4.4.2 An HIV Model	85
	References	87
5	Integrative and Reductionist Approaches to Modeling of Control of Breathing	89
	Chung Tin and Chi-Sang Poon	
5.1	Introduction	89
5.2	Reductionist View of Biological Modeling	90
	5.2.1 The Physiome Project and Multiscale Model	91
5.3	Engineering and Physics View of Integrative Modeling	92
5.4	Top-Down (Integrative) vs Bottom-Up (Reductionist) Approach to Biological Modeling	93
5.5	Criteria of a Good Mechanistic Model	94
5.6	Control of Breathing: Reductionism vs Integration	94
	5.6.1 Limitations of Classical Reflex Models: A Case for Sensorimotor Integration	94
	5.6.2 Optimal Sensorimotor Integration in Respiratory Control	95

5.6.3	Hebbian Feedback Covariance Learning Model of Respiratory Motor Control	97
5.6.4	Cheyne–Stokes Breathing: Three Different Engineering Control Perspectives.....	100
	References.....	102
6	Parameter Identification in a Respiratory Control System	
	Model with Delay	105
	Ferenc Hartung and Janos Turi	
6.1	Introduction.....	105
6.2	Model Equations	106
6.3	Numerical Approximation	108
6.4	Parameter Estimation	109
6.5	Conclusions.....	117
	References.....	117
Part II Practice		
7	Experimental Studies of Respiration and Apnea	121
	Eugene N. Bruce	
7.1	Introduction.....	122
7.2	“Black-box” Models of Chemoreflex Control of Ventilation	123
7.3	A Model for Predicting Brain Tissue Oxygen Tensions	125
7.4	Conclusions.....	129
	Appendix	130
	References.....	131
8	Model Validation and Control Issues in the Respiratory System	133
	James Duffin	
8.1	Introduction.....	133
	8.1.1 The Respiratory Control System	133
	8.1.2 The Central Chemoreceptors.....	136
	8.1.3 The Peripheral Chemoreceptors	136
8.2	Modeling the Chemoreflex Control System.....	137
	8.2.1 Measurement Techniques	137
	8.2.2 Chemoreflex Model Parameter Estimation	139
8.3	Modeling Acid-Base Relations	141
8.4	The Chemoreflex Control System Model	141
	8.4.1 The Central Chemoreflex.....	141
	8.4.2 The Peripheral Chemoreflex	142
	8.4.3 The Complete Chemoreflex Control System Model	142
	8.4.4 The Graphical Model of the Chemoreflex Control of Breathing.....	143
8.5	Chemoreflex Control System Stability	146
