Preface V

Bibliography XI

Abbreviations XXV

I. Introduction 1

A. Objectives of the book 1

B. Notion and meaning of cyberspace 2

C. Internet governance as part of cyberspace regulation 3

II. Confrontation of traditional legal concepts with globalization 5

A. Development of international public law concepts 5

1. Insights from Roman law 5
   a) Res nullius and res communis 5
   b) Jus naturale and jus gentium 6
2. Nation States: sovereignty principle 7
   a) Concept of Westphalian Peace Treaty 7
   b) Challenges of borderless cyberspace 10

B. Present international public law in transition 13

1. Relativization of territoriality principle 13
   a) Scope of territoriality principle 13
   b) Applicable law 13
   c) Jurisdiction 15
2. Provocation by the "autonomy of cyberspace" concept 15
3. Adequacy of analogies to other legal fields 19

C. Escape movement: soft law 22

1. Notion and forms of self-regulation 22
2. Legal "quality" of self-regulation 24
3. Strengths of self-regulation 27
4. Weaknesses of self-regulation 28
5. Importance of self-regulation in the online world 29

III. Challenges for regulatory approaches in cyberspace 33

A. Understanding of law and regulation 33
1. Law as a system 33
2. Regulation as a tool of the State 35

B. Traditional rationales and concepts of regulation 36
1. Public interest theory 36
2. Welfare economics theory 37
3. Public choice theory 38
4. Institutionalism theory 38
5. Capturel cyclical theory 39

C. Social change as challenge for regulation 40
1. Social/environmental developments and dynamic concepts 41
2. Qualitatively improved regulatory strategies 44
3. Flexibility of law: relative autonomy 47
   a) Theory of open systems 47
   b) Autopoiesis approach 47
   c) Relative autonomy and change of law 49

IV. In search for new rule-making approaches in cyberspace 53

A. Code-based regulation 53
1. Concept of Lessig 54
   a) Architecture as key element 54
   b) Influence of law and policy 57
   c) Problems of the code-based approach 58
2. Lex informatica as alternative 60

B. Regulation through formalized standards and networks 63
1. Socio-legal background 63
2. Interlinked networks approach 65
3. Complexity structures in networks 68

C. Informal law-making 70
1. Law-making through (informal) social contract 70
2. Informality features in law-making 74
3. Customary Internet-ional law 76
4. Appendix: Importance of accountability 78

D. Normativity-oriented regulatory concepts 80
1. Philosophical background 80
2. Hybrid economy and information society 82

3. Democracy, participation, constitutionalism 85
a) Concept of "civic virtue" 85
b) Concept of "semiotic democracy" 87
c) Concept of societal constitutionalism 88

E. Assessment of regulatory theories and of possible future perspectives 89
1. Complexity of structured matrix 89
2. Polycentric and sectoral regulation 90
3. Hybrid and mesh regulation 92
4. Interim conclusion 95

V. Development of a "Global Cyberspace Framework" (GCF) 99

A. Introductory Remarks 99

B. Policy parameters for cyberspace rule-making 102
1. Political visions of rule-making 102
2. Scope and limits of rule-making approaches 106
3. Structured rule-making processes (multi-layer governance) 109
a) Principles of a multi-layer approach 109
b) Development of normative multi-layer governance principles 110
c) Macro-legal and micro-legal level approach as alternative 111
4. Legitimacy of cyberspace rule-making 112

C. Guiding principles of a Global Cyberspace Framework 115
1. Formal/procedural principles of a Global Cyberspace Framework 115
a) Need for a dynamic and flexible approach 115
b) Need for a user-centered and community-related approach 118
2. Identification of the relevant substantive principles of cyberspace 120
3. Realization of multistakeholder participation 126
a) General foundations 127
b) Important elements of multistakeholder participation 129
c) Multistakeholder participation in Internet governance debates 131
4. Compliance with basic socio-legal values 136
a) Acknowledgement of cultural diversity 136
b) Recognition of cyberspace openness 138
c) Implementation of corresponding technological values: neutrality and interoperability 142
5. Implementation of structural governance principles 145
a) Organizational management requirements 145
b) Enforcement and dispute resolution requirements 148

D. Incorporation of a Global Cyberspace Framework 149
1. Need for internationalization of policy structures 150
2. Need for multi-layer/polycentric approach with multistakeholder participation 152
3. Need for consensus on guiding principles 154
a) General declaration and additional protocols 154
b) Agreement on guiding principles 156
c) Quality of rule-making 158
4. Need for improved emphasis on the functions of rules 159
