Contents

1 Introduction 1

2 Terminology 5
- 2.1 Systems and Models . . . 5
  - 2.1.1 Systems . . . 5
  - 2.1.2 Models . . . 7
- 2.2 The Simulation of Models . . . 9
  - 2.2.1 System and Model Composition . . . 9
  - 2.2.2 Simulation Types . . . 10
- 2.3 Complexity Measurement . . . 11
- 2.4 Controlling a System . . . 14

3 Problem Statement 17

4 State of the Technology 21
- 4.1 Model and System Specifications . . . 21
  - 4.1.1 Systems Theory . . . 22
  - 4.1.2 System Theory of Technology . . . 27
  - 4.1.3 Discrete Event System Specification . . . 29
  - 4.1.4 Petri nets . . . 31
  - 4.1.5 Current Simulation Software . . . 32
  - 4.1.6 Representations for Analytical Processing . . . 33
- 4.2 Model Simplification and Coarsening . . . 35
  - 4.2.1 Validity of Models . . . 36
  - 4.2.2 Complexity Measurement . . . 39
  - 4.2.3 Simplification and Coarsening Methods . . . 40
  - 4.2.4 About the Managing of Model States . . . 43
  - 4.2.5 Dynamic Model Simplification . . . 44
- 4.3 Bottleneck Detection Methods . . . 45
  - 4.3.1 What is a Bottleneck? . . . 46

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.3.2 Detection Methods 46
4.4 Model Partitioning 50
4.4.1 Partitioning of Graphs 50
4.4.2 Identifying Sequential Regions 51
4.4.3 Single-Entry-Single-Exit Regions 52
4.4.4 Partitioning of Material Flow Models 54
4.5 The Simulation Software d³fact 55
4.5.1 The Server 55
4.5.2 The Simulation Platform 56
4.5.3 d³fact Model Architecture 57
4.5.4 Material Flow Specification 61
4.5.5 Experiment Design in d³fact 62
4.5.6 The Visualization Client 63

5 Required Actions **65**

6 Conceptual Design **71**
6.1 Token Sampling 71
6.2 Material Flow System Specification 75
6.2.1 Formalizing Token Processing Networks 75
6.2.2 Material Flow System States 78
6.2.3 Material Flow Dynamics 80
6.2.4 Implementation as a Discrete Event System 83
6.2.5 Concluding Remarks 84
6.3 Performance of a Token Processing System 85
6.3.1 Adding an External Clock 88
6.3.2 Sampling a TPS 89
6.4 Identifying Groups of Systems for Coarsening 90
6.4.1 Modified *Program Structure Tree* 91
6.4.2 Dynamics 92
6.4.3 Example 92
6.5 Coarsening Sequentially Connected Systems 94
6.5.1 Sampling r 95
6.5.2 Switching to the Coarsened Version ($r \rightarrow \mathtt{r}$) 95
6.5.3 Switch Back to the Original Version ($\mathtt{r} \rightarrow r$) 96
6.5.4 Handling Altering, Assembly, Disassembly of Tokens . . . 98
6.6 Coarsening Arbitrarily Connected Systems 100
6.6.1 Sampling Groups of Arbitrarily Connected Systems 101
6.6.2 Switch to the Coarsened Version ($r \rightarrow \mathtt{r}$) 102
6.6.3 Switch Back to the Original Version ($\mathtt{r} \rightarrow r$) 102
6.6.4 Summing Up 103
6.7 Controlling the Coarsening Process 103
6.7.1 Reference Output and Feedback 104
6.7.2 Where? 104
6.7.3 How Long? 108
6.7.4 When? 112
6.7.5 Measuring Speed Gain and Output Error 114
6.8 Conclusion 116

7 Implementation **119**
7.1 Material Flow System Implementation 119
7.1.1 Token Processing System Implementation 120
7.1.2 Channel Implementation 120
7.1.3 Implementation Details 120
7.2 Integrating the Token Sampling 123
7.2.1 Token State Sampling 124
7.2.2 Identifying Groups of Systems 124
7.2.3 Coarsening of Sequentially Connected Regions 125
7.2.4 Coarsening of Arbitrarily Connected Regions 126
7.2.5 Controlling the Coarsening Process 127

8 Validation **129**
8.1 Purpose-Build Models 129
8.1.1 Model Q 130
8.1.2 Model F 131
8.2 Measurement and Evaluation Methods 131
8.3 Do not Coarsen the Bottleneck 133
8.4 Error Size Dependency 135
8.5 Complete versus Separate 137
8.6 The Effect of the Resampling 139
8.7 Subsystem Runtime Consumption 140
8.7.1 Preprocessing and Program Structure Tree Runtime 140
8.8 Determining the Break-even Point ω 142
8.9 Evaluation of the Controlling Function 144
8.9.1 Model C 144
8.9.2 Results 144
8.10 Conclusion 146

9 Conclusion **147**

Bibliography **149**

A Glossary **157**

B Listings **159**

C Large PST Example **165**
