Preface	v
1 Introduction	1
1.1 A Model for Selfish Network Creation	3
1.2 Thesis Focus & Overview	4
2 Preliminaries	9
2.1 The Classic Model of Network Creation Games	10
2.2 Notions of Stability, Quality, and Convergence	12
2.2.1 Notions of Stability	12
2.2.2 Quality of Equilibria	14
2.2.3 Convergence of Improving-Response Processes	15
2.3 Known Results	17
2.3.1 Model Variants	18
2.3.2 Relationships of Model Variants	22
2.4 Alternative Models	22
3 Loss and Benefit of Friendships	27
3.1 The Friendship Model & Preliminaries	29
3.2 Related Work & Contribution	31
3.3 Worst-Case Friendships in Swap-Games	33
3.3.1 Private Costs in Max-Swap-Game Tree Equilibria	37
3.3.2 The Price of Anarchy in Max-Swap-Games	45
3.3.3 The Price of Anarchy in Sum-Swap-Games	49
3.4 Process Equilibria	51
3.5 Conclusion & Future Work	56

4	The Impact of Choosing Edge Qualities	59
4.1	Model & Notations	60
4.2	Related Work & Contribution	64
4.3	Existence of Equilibria	65
4.3.1	Equilibria in the Sum-Pricing-Game	65
4.3.2	Equilibria in the Max-Pricing-Game	70
4.4	Quality of Equilibria in the Sum-Pricing-Game	73
4.4.1	Employing Characteristic Price Functions	79
4.5	Quality of Equilibria in the Max-Pricing-Game	80
4.6	Conclusion & Future Work	84
5	Limits of Locality	85
5.1	Model & Notations	87
5.2	Related Work & Contribution	89
5.3	Preliminaries	91
5.4	Approximation Quality of Greedy Probing	94
5.4.1	Approximation of the k -Local Sum-Game	96
5.4.2	Approximation Lower Bound in the Sum-Game	97
5.4.3	Approximation Upper Bounds in the Sum-Game	104
5.5	Efficiency of Probing Locality	109
5.5.1	A Clash of Models	109
5.5.2	The Price of Anarchy	113
5.6	Conclusion & Future Work	118
6	Multilevel Network Games	121
6.1	Model & Preliminaries	123
6.2	Related Work & Contribution	125
6.3	Bidirectional Gateways	126
6.3.1	The Sum-Layer-Game	127
6.3.2	The Max-Layer-Game	138
6.4	Unidirectional Gateways	143
6.4.1	Existence of Equilibria	144
6.4.2	Quality of Equilibria	146
6.5	Conclusion & Future Work	151
	Bibliography	153
	Index	163
