1	Some Classical Problems in Random Geometry	1
	Pierre Calka	
1.1	Introduction: Geometric Probability, Integral Geometry, Stochastic Geometry	1
1.2	From Buffon's Needle to Integral Geometry	3
1.2.1	Starting from Buffon's Needle	4
1.2.2	Cauchy-Crofton formula	6
1.2.3	Extension to Higher Dimension	6
1.3	From Bertrand's Paradox to Random Tessellations	10
1.3.1	Starting from Bertrand's Paradox	10
1.3.2	Random Sets of Points, Random Sets of Lines and Extensions	12
1.3.3	On Two Examples of Random Convex Tessellations	13
1.3.4	Mean Values and Distributional Properties of the Zero-Cell and of the Typical Cell	17
1.4	From Sylvester's Four-Point Problem to Random Polytopes	20
1.4.1	Starting from Sylvester's Four-Point Problem	20
1.4.2	Random Polytopes	28
1.5	From the Bicycle Wheel Problem to Random Coverings and Continuum Percolation	32
1.5.1	Starting from the Bicycle Wheel Problem and Random Covering of the Circle	32
1.5.2	A Few Basics on the Boolean Model	35
	References	38
2	Understanding Spatial Point Patterns Through Intensity and Conditional Intensities	45
	Jean-François Coeurjolly and Frédéric Lavancier	
2.1	Introduction	45
2.2	Intensity and Conditional Intensity Functions	47

2.2.1	Definition and Theoretical Characterization of a Spatial Point Process	47
2.2.2	Moment Measures Factorial Moment Measures and Intensity Functions	48
2.2.3	Palm Distributions and Palm Intensities	49
2.2.4	Papangelou Conditional Intensities	52
2.3	Examples on Standard Models of Spatial Point Processes	54
2.3.1	Poisson Point Process	54
2.3.2	Gibbs Point Processes	56
2.3.3	Cox Processes	59
2.3.4	Determinantal Point Processes	62
2.4	Estimating the Intensity Function	63
2.4.1	Constant Intensity	64
2.4.2	Non Parametric Estimation of the Intensity Function	66
2.4.3	Parametric Estimation of the Intensity Function	67
2.5	Higher-Order Interaction Estimation via Conditional Intensity	72
2.5.1	Parametric Estimation with the Papangelou Conditional Intensity	73
2.5.2	Palm Likelihood Estimation	80
2.6	Conclusion	81
	References	82
3	Stochastic Methods for Image Analysis	87
	Agnès Desolneux	
3.1	Visual Perception and the Non-accidentalness Principle	87
3.1.1	Gestalt Theory of Visual Perception	89
3.1.2	The Non-accidentalness Principle	93
3.2	A Contrario Method for the Detection of Geometric Structures in Images	95
3.2.1	General Formulation of a Contrario Methods	95
3.2.2	Detection of Alignments in an Image	96
3.2.3	Detection of Contrasted or Smooth Curves	102
3.2.4	Detection of Vanishing Points	108
3.2.5	Detection of the Similarity of a Scalar Attribute	111
3.2.6	Discussion	113
3.3	Stochastic Models of Images: The Problem of Modeling and Synthesizing Texture Images	114
3.3.1	What is a Texture Image?	115
3.3.2	Texture Synthesis	115
3.3.3	Discrete Fourier Transform and the RPN Algorithm	118
3.3.4	Gaussian Models for Texture Images	121
3.3.5	Shot Noise Model and Dead Leaves Model	124
	References	126

4	Introduction to Random Fields and Scale Invariance	129
	Hermine Biermé	
4.1	Random Fields and Scale Invariance	129
4.1.1	Introduction to Random Fields	130
4.1.2	Stationarity and Invariances	135
4.2	Sample Paths Properties	149
4.2.1	Sample Paths Regularity	149
4.2.2	Hausdorff Dimension of Graphs	154
4.3	Simulation and Estimation	157
4.3.1	Simulation	157
4.3.2	Estimation	163
4.3.3	Application in Medical Imaging Analysis	168
4.4	Geometric Construction	171
4.4.1	Random Measures	171
4.4.2	Chentsov's Representation: Lévy and Takenaka Constructions	173
4.4.3	Fractional Poisson Fields	175
	References	178
5	Introduction to the Theory of Gibbs Point Processes	181
	David Dereudre	
5.1	Introduction	181
5.2	Finite Volume Gibbs Point Processes	183
5.2.1	Poisson Point Process	184
5.2.2	Energy Functions	185
5.2.3	Finite Volume GPP	188
5.2.4	DLR Equations	190
5.2.5	GNZ Equations	191
5.2.6	Ruelle Estimates	193
5.3	Infinite Volume Gibbs Point Processes	194
5.3.1	The Local Convergence Setting	195
5.3.2	An Accumulation Point $P^{z,\beta}$	196
5.3.3	The Finite Range Property	198
5.3.4	DLR Equations	199
5.3.5	GNZ Equations	201
5.3.6	Variational Principle	203
5.3.7	A Uniqueness Result	206
5.3.8	A Non-uniqueness Result	209
5.4	Estimation of Parameters	214
5.4.1	Maximum Likelihood Estimator	215
5.4.2	Takacs-Fiksel Estimator	217
5.4.3	Maximum Pseudo-Likelihood Estimator	220
5.4.4	Solving an Unobservable Issue	222
5.4.5	A Variational Estimator	223
