Contents

Chapter 1. Introduction: The main results 1
1.1. Generalized multimodal maps, maximal invariant sets and related notions 2
1.2. Periodic orbits and basins of attraction: Bounded distortion property 4
1.3. Statement of Theorem A: Analytic dependence of geometric pressure on temperature, equilibria 7
1.4. Characterizations of geometric pressure 10
1.5. Non-uniformly hyperbolic interval maps 13
1.6. Complementary Remarks 14
1.7. Acknowledgements 15

Chapter 2. Preliminaries 17
2.1. Basic properties of generalized multimodal pairs 17
2.2. On exceptional sets 20
2.3. Backward stability 21
2.4. Weak isolation 24
2.5. Bounded Distortion and related notions 25

Chapter 3. Non-uniformly hyperbolic interval maps 27

Chapter 4. Equivalence of the definitions of geometric pressure 33

Chapter 5. Pressure on periodic orbits 41

Chapter 6. Nice inducing schemes 45
6.1. Nice sets and couples 45
6.2. Canonical induced map 47
6.3. Pressure function of the canonical induced map 49

Chapter 7. Analytic dependence of geometric pressure on temperature. Equilibria 53
7.1. The analyticity 53
7.2. From the induced map to the original map: Conformal measure and proof of Theorem A.2 54
7.3. Equilibrium states 55

Chapter 8. Proof of key lemma: Induced pressure 59

Appendix A. More on generalized multimodal maps 63
A.1. Darboux property approach and other observations 63
A.2. On topological transitivity and related notions 68

Appendix B. Uniqueness of equilibrium via inducing 71

Appendix C. Conformal pressures 73

Bibliography 79
