Claudia Czado

Analyzing Dependent Data with Vine Copulas

A Practical Guide With R

Springer

Contents

1 Multivariate Distributions and Copulas 1
1.1 Univariate Distributions 1
1.2 Multivariate Distributions 4
1.3 Features of Multivariate Data 10
1.4 The Concept of a Copula and Sklar's Theorem 11
1.5 Elliptical Copulas 15
1.6 Empirical Copula Approximation 17
1.7 Invariance Properties of Copulas 18
1.8 Meta Distributions 19
1.9 Bivariate Conditional Distributions Expressed in Terms of Their Copulas 20
1.10 Exercises 22

2 Dependence Measures 27
2.1 Pearson Product–Moment Correlation 27
2.2 Kendall's τ and Spearman's ρ_s 28
2.3 Tail Dependence 34
2.4 Partial and Conditional Correlations 36
2.5 Exercises 39

3 Bivariate Copula Classes, Their Visualization, and Estimation 43
3.1 Construction of Bivariate Copula Classes 43
3.2 Bivariate Elliptical Copulas 43
3.3 Archimedean Copulas 43
3.4 Bivariate Extreme-Value Copulas 47
3.5 Relationship Between Copula Parameters and Kendall's τ 53
3.6 Rotated and Reflected Copulas 56
3.7 Relationship Between Copula Parameters and Tail Dependence Coefficients 58
3.8 Exploratory Visualization 58
3.9 Simulation of Bivariate Copula Data 62
3.10 Parameter Estimation in Bivariate Copula Models 64
3.11 Conditional Bivariate Copulas 67

3.12 Average Conditional and Partial Bivariate Copulas 70
3.13 Exercises 71

4 Pair Copula Decompositions and Constructions 77
4.1 Illustration in Three Dimensions 77
4.2 Pair-Copula Constructions of Drawable D-vine and Canonical C-vine Distributions 88
4.3 Conditional Distribution Functions Associated with Multivariate Distributions 90
4.4 Exercises 92

5 Regular Vines 95
5.1 Necessary Graph Theoretic Background 95
5.2 Regular Vine Tree Sequences 98
5.3 Regular Vine Distributions and Copulas 103
5.4 Simplified Regular Vine Classes 108
5.5 Representing Regular Vines Using Regular Vine Matrices 111
5.6 Exercises 119

6 Simulating Regular Vine Copulas and Distributions 123
6.1 Simulating Observations from Multivariate Distributions 123
6.2 Simulating from Pair Copula Constructions 124
6.3 Simulating from C-vine Copulas 127
6.4 Simulating from D-vine Copulas 133
6.5 Simulating from Regular Vine Copulas 136
6.6 Exercises 143

7 Parameter Estimation in Simplified Regular Vine Copulas 145
7.1 Likelihood of Simplified Regular Vine Copulas 145
7.2 Sequential and Maximum Likelihood Estimation in Simplified Regular Vine Copulas 147
7.3 Asymptotic Theory of Parametric Regular Vine Copula Estimators 149
7.4 Exercises 152

8 Selection of Regular Vine Copula Models 155
8.1 Selection of a Parametric Copula Family for Each Pair Copula Term and Estimation of the Corresponding Parameters for a Given Vine Tree Structure 156
8.2 Selection and Estimation of all Three Model Components of a Vine Copula 158
8.3 The Dißmann Algorithm for Sequential Top-Down Selection of Vine Copulas 159
8.4 Exercises 169

9 Comparing Regular Vine Copula Models 173
9.1 Akaike and Bayesian Information Criteria for Regular Vine Copulas 174
9.2 Kullback–Leibler Criterion 177
9.3 Vuong Test for Comparing Different Regular Vine Copula Models 178
9.3.1 Correction Factors in the Vuong Test for Adjusting for Model Complexity 181
9.4 Exercises 182

10 Case Study: Dependence Among German DAX Stocks 185
10.1 Data Description and Sector Groupings 185
10.2 Marginal Models 187
10.3 Finding Representatives of Sectors 188
10.4 Dependence Structure Among Representatives 188
10.5 Model Comparison 199
10.6 Some Interpretive Remarks 201

11 Recent Developments in Vine Copula Based Modeling 203
11.1 Advances in Estimation 203
11.2 Advances in Model Selection of Vine Copula Based Models 207
11.3 Advances for Special Data Structures 213
11.4 Applications of Vine Copulas in Financial Econometrics 217
11.5 Applications of Vine Copulas in the Life Sciences 219
11.6 Application of Vine Copulas in Insurance 222
11.7 Application of Vine Copulas in the Earth Sciences 222
11.8 Application of Vine Copulas in Engineering 223
11.9 Software for Vine Copula Modeling 223
