

CONTENTS

List of Figures	vii
List of Tables	ix
Preface	xiii
1 Introduction	1
1.1 The Problem and its Importance	2
1.2 Scope of the Present Investigation	6
1.3 Plan of Each Chapter	8
2 A Review of Entropy and Information Theory	15
2.1 Introduction	15
2.2 Theory	17
2.3 Selected Applications	31
3 Probability Distributions for Commodity Flows	53
3.1 Introduction	53
3.2 Production-Constrained Distributions	55
3.3 Doubly-Constrained Distributions	70
3.4 Concluding Remarks	72
4 Non-Spatial Input-Output Analysis	79
4.1 Introduction	79
4.2 Basic Model Characteristics	82
4.3 Some Information-Theoretical Formulations	101
5 Intersectoral Flows in Space: Static Formulations	131
5.1 Introduction	131
5.2 Basic Model Characteristics	134
5.3 Existing Non-Survey Techniques for Estimating Spatial Flows	139
5.4 A Consistent Approach to Interregional Estimation	148

6	Intersectoral Flows in Space: Dynamic Formulations	183
6.1	Introduction	183
6.2	Basic Model Characteristics	185
6.3	A Closed Model Approach to Interregional Estimation	189
7	Towards an Integrated System of Models for National and Regional Development	205
7.1	Introduction	205
7.2	In Search of a Framework for Integration	207
7.3	National Development Scenarios	222
7.4	The National-Regional Interface	231
7.5	Regional Development Scenarios	236
7.6	Concluding Remarks	244
	Appendixes	253
A	Basic Microstate Descriptions	253
B	Incomplete Prior Information: A Simple Example	257
C	Computing Capital Coefficients and Turnpike Solutions: The DYNIO Package	259
D	Minimizing Information Losses in Simple Aggregation: Two Test Problems	274
E	Computing Interregional and Intersectoral Flows:	276
	References	287
	Index	305
