

CONTENTS

Useful Tables	front and back covers	
Table 1	Physical Constants	
Table 2	Energy Conversion Factors	
Table 3	The Electromagnetic Spectrum	
Chapter 1	Introduction to Laser Operation	1
1.1	Introduction / 1	
1.2	Lasers and Laser Light / 3	
1.3	Light in Cavities / 9	
1.4	Light Emission and Absorption in Quantum Theory / 14	
1.5	Einstein Theory of Light–Matter Interactions / 15	
1.6	Summary / 19	
Chapter 2	Classical Dispersion Theory	21
2.1	Introduction / 21	
2.2	The Electron Oscillator Model / 27	
2.3	Refractive Index and Polarizability / 33	
2.4	The Cauchy Formula / 40	
2.5	Electric Dipole Radiation / 44	
2.6	Rayleigh Scattering / 49	
2.7	Polarization by Rayleigh Scattering / 54	
2.8	The Tyndall–Rayleigh Experiment / 56	
2.9	Birefringence / 57	
2.10	Summary / 62	
	Problems / 62	
Chapter 3	Classical Theory of Absorption	65
3.1	Introduction / 65	
3.2	Absorption and the Lorentz Model / 68	
3.3	Complex Polarizability and Index of Refraction / 71	

- 3.4 Polarizability and Index of Refraction Near a Resonance / 77
- 3.5 Lorentzian Atoms and Radiation in Cavities / 80
- 3.6 The Absorption Coefficient / 83
- 3.7 Oscillator Strength / 88
- 3.8 Absorption of Broadband Light / 90
- 3.9 Collisions and “Friction” in the Lorentz Model / 93
- 3.10 Collision Cross Sections / 98
- 3.11 Doppler Broadening / 101
- 3.12 The Voigt Profile / 104
- 3.13 Example: Absorption by Sodium Vapor / 110
Problems / 112

Chapter 4 Atoms, Molecules, and Solids 115

- 4.1 Introduction / 115
- 4.2 The Bohr Atom / 115
- 4.3 Quantum States and Degeneracy / 121
- 4.4 The Periodic Table / 122
- 4.5 Molecular Vibrations / 125
- 4.6 Molecular Rotations / 131
- 4.7 Example: Carbon Dioxide / 133
- 4.8 Energy Bands in Solids / 135
- 4.9 Semiconductors / 139
- 4.10 Semiconductor Junctions / 144
- 4.11 Summary / 153
Problems / 154

Chapter 5 The Schrödinger Equation 157

- 5.1 Introduction / 157
 - 5.2 The Wave Function / 157
 - 5.3 Stationary States / 163
 - 5.4 Atomic Wave Functions and Their Properties / 165
 - 5.5 Energy Bands and Wave Functions for Solids / 170
 - 5.6 Summary / 179
- Appendix 5.A Wave Functions for the Electron in a Hydrogen Atom / 179

Appendix 5.B	Wave Functions for a Particle in the Potential $V(x) = \frac{1}{2}kx^2$ (One-Dimensional Harmonic Oscillator) / 181	
	Problems / 182	
Chapter 6	The Time-Dependent Schrödinger Equation	185
	6.1 Introduction / 185	
	6.2 Time-Dependent Solutions / 185	
	6.3 Two-State Quantum Systems and Sinusoidal External Forces / 189	
	6.4 Quantum Mechanics and the Lorentz Model / 193	
	6.5 Density Matrix and Collisional Relaxation / 200	
Appendix 6.A	Matrix Elements of \mathbf{r} for Low-Lying States of Hydrogen / 207	
	Problems / 208	
Chapter 7	Emission and Absorption and Rate Equations	211
	7.1 Introduction / 211	
	7.2 Stimulated Absorption and Emission Rates / 211	
	7.3 Population Rate Equations / 214	
	7.4 Absorption Cross Section and the Einstein B Coefficient / 218	
	7.5 Strong Fields and Saturation / 222	
	7.6 Spontaneous Emission and the Einstein A Coefficient / 224	
	7.7 Thermal Equilibrium Radiation / 228	
	7.8 Photons per Mode / 233	
Appendix 7.A	Relations among A and B Coefficients / 234	
	Problems / 241	
Chapter 8	Semiclassical Radiation Theory	243
	8.1 Introduction / 243	
	8.2 Optical Bloch Equations / 243	
	8.3 Maxwell–Bloch Equations / 250	
	8.4 Linear Absorption and Amplification / 252	
	8.5 Semiclassical Laser Theory / 255	
	Problems / 260	

Chapter 9	Wave-Particle Duality of Light	263
	9.1 What is a Photon? / 263	
	9.2 Photon Polarization: All or Nothing / 264	
	9.3 Failure of Classical Wave Theory: Recoil and Coincidence / 265	
	9.4 Wave Interference and Photons / 269	
	9.5 Photon Counting / 271	
	9.6 The Poisson Distribution / 275	
	9.7 Photons and Lasers / 278	
	Appendix 9.A Photon Detectors / 278	
	Problems / 282	
Chapter 10	Laser Oscillation: Gain and Threshold	283
	10.1 Introduction / 283	
	10.2 Gain / 283	
	10.3 Feedback / 287	
	10.4 Threshold / 288	
	10.5 Rate Equations for Photons and Populations / 294	
	10.6 Comparison with the Theory of Chapter 1 / 299	
	10.7 Three-Level Laser Scheme / 300	
	10.8 Four-Level Laser Scheme / 304	
	10.9 Comparison of Pumping Requirements for Three- and Four-Level Lasers / 306	
	10.10 Examples of Three- and Four-Level Lasers / 308	
	10.11 Small-Signal Gain and Gain Saturation / 310	
	10.12 Spatial Hole Burning / 315	
	10.13 Summary / 318	
	Problems / 318	
Chapter 11	Laser Oscillation: Power and Frequency	321
	11.1 Introduction / 321	
	11.2 Output Intensity: Uniform-Field Approximation / 321	
	11.3 Optimal Output Coupling / 324	
	11.4 Effect of Spatial Hole Burning / 327	
	11.5 Large Output Coupling / 330	
	11.6 Measuring Small-Signal Gain and Optimal Output Coupling / 336	
	11.7 Inhomogeneously Broadened Laser Media / 339	

11.8	Spectral Hole Burning and the Lamb Dip /	340
11.9	Cavity Frequency and Frequency Pulling /	342
11.10	The Laser Bandwidth /	348
11.11	Laser Power at Threshold /	351
11.12	Obtaining Single-Mode Oscillation /	354
Appendix 11.A The Fabry-Perot Etalon /		359
	Problems /	363

Chapter 12 Multimode and Transient Oscillation 365

12.1	Introduction /	365
12.2	Rate Equations for Intensities and Populations /	365
12.3	Relaxation Oscillations /	366
12.4	Q Switching /	370
12.5	Methods of Q Switching /	373
12.6	Multimode Laser Oscillation /	375
12.7	Phase-Locked Oscillators /	377
12.8	Mode Locking /	381
12.9	AM Mode Locking /	385
12.10	FM Mode Locking /	388
12.11	Methods of Mode Locking /	390
12.12	Amplification of Short Optical Pulses /	395
12.13	Amplified Spontaneous Emission /	399
12.14	Ultrashort Light Pulses /	401
Appendix 12.A Runge-Kutta FORTRAN and BASIC Programs /		403
Appendix 12.B Diffraction of Light by Sound /		406
	Problems /	408

Chapter 13 Specific Lasers and Pumping Mechanisms 411

13.1	Introduction /	411
13.2	Solid-State Rare-Earth Ion Lasers and Optical Pumping /	412
13.3	Dye Lasers and Optical Pumping /	415
13.4	Electron Impact Excitation /	420
13.5	Excitation Transfer /	422
13.6	He-Ne Lasers /	425
13.7	Rate-Equation Model of Population Inversion in He-Ne Lasers /	428

- 13.8 Radial Gain Variation in He-Ne Laser Tubes / 432
- 13.9 CO₂ Electric-Discharge Lasers / 437
- 13.10 Gas-Dynamic Lasers / 439
- 13.11 Chemical Lasers / 441
- 13.12 Excimer Lasers / 443
- 13.13 Free-Electron Lasers / 445
- 13.14 Semiconductor Lasers / 452
- 13.15 Remarks / 457
- Appendix 13.A The Gain Coefficient for Molecular-Vibration Lasers / 457
- Appendix 13.B Trajectory and Energy Analysis of the Free-Electron Laser / 461
- Problems / 466

Chapter 14 Laser Resonators **469**

- 14.1 Introduction / 469
- 14.2 The Ray Matrix / 470
- 14.3 Resonator Stability / 475
- 14.4 The Paraxial Wave Equation / 480
- 14.5 Gaussian Beams / 484
- 14.6 The *ABCD* Law for Gaussian Beams / 490
- 14.7 Gaussian Beam Modes of Laser Resonators / 495
- 14.8 Higher-Order Gaussian Beam Modes / 502
- 14.9 Resonators for He-Ne Lasers / 508
- 14.10 Diffraction / 511
- 14.11 Diffraction by an Aperture / 514
- 14.12 Diffraction Theory of Laser Resonators / 519
- 14.13 Unstable Resonators for High-Power Lasers / 523
- 14.14 Bessel Beam Modes / 524
- Problems / 529

Chapter 15 Optical Coherence and Lasers **533**

- 15.1 Introduction / 533
- 15.2 Brightness / 533
- 15.3 The Coherence of Light / 538
- 15.4 The Mutual Coherence Function / 540
- 15.5 Stationary Fields / 545
- 15.6 Fringe Visibility / 548

15.7	Spatial Coherence of Light from Ordinary Sources / 550	
15.8	Spatial Coherence of Laser Radiation / 556	
15.9	Directionality of Laser Radiation / 558	
15.10	Coherence and the Michelson Interferometer / 559	
15.11	Temporal Coherence / 562	
15.12	The Photon Degeneracy Factor / 566	
15.13	Orders of Coherence / 570	
15.14	Photon Statistics of Lasers and Thermal Sources / 571	
15.15	Brown–Twiss Correlations / 576 Problems / 582	
Chapter 16	Some Laser Applications	585
16.1	Introduction / 585	
16.2	Distance and Velocity Measurements / 585	
16.3	The Laser Gyroscope / 589	
16.4	Holography: The Essential Principle / 594	
16.5	Holography: Practical Aspects / 597	
16.6	Optical Communications / 609	
16.7	Lasers in Medicine: Ophthalmology / 618	
16.8	Remarks / 622 Problems / 622	
Chapter 17	Introduction to Nonlinear Optics	625
17.1	Introduction / 625	
17.2	Nonlinear Electron Oscillator Model / 625	
17.3	Perturbative Solution of the Nonlinear Oscillator Equation / 628	
17.4	Nonlinear Polarization and the Wave Equation / 631	
17.5	Second-Harmonic Generation / 635	
17.6	Phase Matching / 638	
17.7	Intracavity Second-Harmonic Generation / 641	
17.8	Three-Wave Mixing / 642	
17.9	Parametric Amplification / 646	
17.10	Parametric Oscillation / 651	
17.11	Tuning of Parametric Oscillators / 656	
17.12	Nonlinear Susceptibilities / 658	

- 17.13 The Nonlinear Susceptibility Tensor / 661
- 17.14 Nonlinear Materials / 664
- 17.15 Notational Convention for Nonlinear Susceptibilities / 666
- Problems / 669

Chapter 18 Nonlinear Optics: Higher-Order Processes

671

- 18.1 Introduction / 671
- 18.2 Four-Wave Mixing / 671
- 18.3 Third-Harmonic Generation / 673
- 18.4 Resonance Enhancement of Nonlinear Susceptibilities / 676
- 18.5 Multiphoton Absorption and Emission / 677
- 18.6 Raman Scattering / 682
- 18.7 Stimulated Raman Scattering / 687
- 18.8 Coherent Anti-Stokes Raman Scattering (CARS) / 690
- 18.9 Stimulated Brillouin Scattering / 692
- 18.10 Optical Phase Conjugation / 701
- 18.11 Phase Conjugation by Nonlinear Optical Processes / 704
- 18.12 Self-Focusing / 709
- Problems / 714
