CONTENTS

SYMBOLS xvii

1 INTRODUCTION 1

Designing for Electromagnetic Compatibility, 4
EMC Regulation, 6
Typical Noise Path, 16
Use of Network Theory, 19
Methods of Noise Coupling, 22
Miscellaneous Noise Sources, 23
Methods of Eliminating Interference, 26
Summary, 26
Bibliography, 27

2 CABLING 29

Capacitive Coupling, 30
Effect of Shield on Capacitive Coupling, 33
Inductive Coupling, 37
Mutual Inductance Calculations, 40
Effect of Shield on Magnetic Coupling, 42
Magnetic Coupling between Shield and Inner Conductor, 42
Shielding to Prevent Magnetic Radiation, 50
Shielding a Receptor against Magnetic Fields, 52
Shield Transfer Impedance, 55
Experimental Data, 56
Example of Selective Shielding, 60
Coaxial Cable versus Shielded Twisted Pair, 61
Braided Shields, 62
Effect of Pigtails, 63
Ribbon Cables, 67
Electrically Long Cables, 69
Summary, 70
Bibliography, 70

3 GROUNDING **73**

Safety Grounds, 73
Signal Grounds, 75
Single-Point Ground Systems, 77
Multipoint Ground Systems, 79
Hybrid Grounds, 81
Functional Ground Layout, 82
Practical Low-Frequency Grounding, 82
Hardware Grounds, 84
Single-Ground Reference for a Circuit, 86
Amplifier Shields, 88
Grounding of Cable Shields, 89
Ground Loops, 93
Low-Frequency Analysis of Common-Mode Choke, 96
High-Frequency Analysis of Common-Mode Choke, 100
Differential Amplifiers, 102
Shield Grounding at High Frequencies, 105
Guard Shields, 106
Guarded Meters, 110
Summary, 113
Bibliography, 114

4 BALANCING AND FILTERING **116**

Balancing, 116
Power-Supply Decoupling, 122
Decoupling Filters, 126
Amplifier Decoupling, 129
Driving Capacitive Loads, 130
High-Frequency Filtering, 133
System Bandwidth, 134
Modulation and Coding, 134
Summary, 137
Bibliography, 137

5 PASSIVE COMPONENTS **137**

Capacitors, 137
Inductors, 143
Transformers, 145
Resistors, 146

Noise in Resistors, 147
Conductors, 149
Ferrite Beads, 152
Summary, 157
Bibliography, 158

6 SHIELDING **159**

Near Fields and Far Fields, 159
Characteristic and Wave Impedances, 162
Shielding Effectiveness, 164
Absorption Loss, 166
Reflection Loss, 169
Composite Absorption and Reflection Loss, 178
Summary of Shielding Equations, 180
Shielding with Magnetic Material, 182
Experimental Data, 185
Apertures, 187
Waveguide Below Cutoff, 192
Conductive Gaskets, 193
Conductive Windows, 195
Conductive Coatings, 196
Cavity Resonance, 198
Grounding of Shields, 199
Summary, 199
Bibliography, 202

7 CONTACT PROTECTION **203**

Glow Discharges, 203
Metal-Vapor or Arc Discharges, 204
AC versus DC Circuits, 206
Contact Material, 207
Contact Rating, 207
Loads with High Inrush Currents, 208
Inductive Loads, 209
Contact Protection Fundamentals, 211
Transient Suppression for Inductive Loads, 216
Contact Protection Networks for Inductive Loads, 219
Inductive Loads Controlled by a Transistor Switch, 222
Resistive Load Contact Protection, 223

Contact Protection Selection Guide, 224
Examples, 224
Summary, 226
Bibliography, 226

8 INTRINSIC NOISE SOURCES **228**

Thermal Noise, 228
Characteristics of Thermal Noise, 232
Equivalent Noise Bandwidth, 234
Shot Noise, 238
Contact Noise, 238
Popcorn Noise, 239
Addition of Noise Voltages, 240
Measuring Random Noise, 241
Summary, 242
Bibliography, 243

9 ACTIVE DEVICE NOISE **244**

Noise Factor, 244
Measurement of Noise Factor, 246
Calculating S/N Ratio and Input Noise Voltage from Noise Factor, 249
Noise Voltage and Current Model, 250
Measurement of V_n and I_n, 253
Calculating Noise Factor and S/N Ratio from V_n–I_n, 253
Optimum Source Resistance, 255
Noise Factor of Cascaded Stages, 257
Noise Temperature, 260
Bipolar Transistor Noise, 261
Junction Field Effect Transistor Noise, 264
Noise in IC Operational Amplifiers, 267
Summary, 272
Bibliography, 272

10 DIGITAL CIRCUIT NOISE AND LAYOUT **274**

Frequency versus Time Domain, 275
Analog versus Digital Circuits, 276
Digital Logic Noise, 276

Internal Noise Sources, 277
Digital Circuit Ground Noise, 280
Power Distribution, 286
Noise Voltage Objectives, 293
Measuring Noise Voltages, 294
Unused Inputs, 295
Logic Families, 295
Summary, 296
Bibliography, 296

11 DIGITAL CIRCUIT RADIATION **298**
Differential-Mode Radiation, 298
Controlling Differential-Mode Radiation, 306
Common-Mode Radiation, 313
Controlling Common-Mode Radiation, 315
Engineering Documentation and EMC, 319
Summary, 319
Bibliography, 320

12 ELECTROSTATIC DISCHARGE **322**
Static Generation, 322
Human Body Model, 327
Static Discharge, 330
ESD Protection in Equipment Design, 332
Software and ESD Protection, 344
ESD versus EMC, 348
Summary, 348
Bibliography, 349

APPENDIX A The Decibel **351**
Using the Decibel for Other Than Power Ratios, 351
Power Loss or Negative Power Gain, 353
Absolute Power Level, 353
Noise Measurements, 354
Crosstalk Units, 356
Summing Powers Expressed in Decibels, 356

APPENDIX B Summary of Noise Reduction Techniques **359**

APPENDIX C Multiple Reflections of Magnetic Fields in Thin Shields 362

APPENDIX D Problems 365

APPENDIX E Answers to Problems 385

APPENDIX F Electromagnetic Compatibility Testing Procedures 399

FCC Methods of Measurement of Radio Noise Emissions From Computing Devices, 399

INDEX 419
