

CONTENTS

Part 1 - DAE Applications and Basic Solution Methods	1
An Example of Real-Time Simulation: Multi-body Vehicles <i>R. Deyo</i>	3
Industrial Practices and Examples: Space Structures and Robots <i>H. Frisch</i>	33
Real-Time Motion Base Simulation <i>R. Beck</i>	45
Aspects of Efficient and Reliable Multibody System Simulation <i>R. Schwertassek and W. Rulka</i>	55
Generalized Coordinate Partitioning Methods for Numerical Integration of Differential-Algebraic Equations of Dynamics <i>E. Haug and J. Yen</i>	97
An Introduction to Numerical Methods for ODEs and DAEs <i>W. Gear</i>	115
Methods and Software for Differential-Algebraic Systems <i>L. Petzold</i>	127
Part 2 - New DAE and ODE Solution Methods	141
A New Class of Generalized Inverses for the Solution of Discretized Euler-Lagrange Equations <i>C. Führer and B. Leimkuhler</i>	143
Differential-Geometric Techniques for Solving Differential Algebraic Equations <i>F. Potra and W. Rheinboldt</i>	155
On Baumgarte Stabilization for Differential Algebraic Equations <i>G. Ostermeyer</i>	193
A Stabilization Method for Kinematic and Kinetic Constraint Equations <i>D. Bae and S. Yang</i>	209
Parallel Solution of ODEs <i>W. Gear</i>	233
Subcycling Applied to Ordinary Differential Equations <i>W. Bruijs, C. Florie, P. de Coo, and A. Sauren</i>	249

Part 3 - Advanced DAE Applications	263
<i>Real Time Simulation of Complex 3-D Multibody Systems with Realistic Graphics</i>	265
<i>J. García de Jalón, J. Jiménez, A. Avello, F. Martín, and J. Cuadrado</i>	
<i>On the GAUSS Principle in the Numerical Integration of Mechanical Systems</i>	293
<i>S. Sparschuh and P. Hagedorn</i>	
<i>Simultaneous Derivation of Control Laws and of Dynamical Model Equations for Controlled Mechanisms</i>	301
<i>M. Cotsaftis and C. Vibet</i>	
<i>A Comparison of Numerical Integration Methods with a View to Fast Simulation of Mechanical Dynamical Systems</i>	329
<i>J. Meijaard</i>	
<i>BDF Methods for DAEs in Multi-body Dynamics: Shortcomings and Improvements</i>	345
<i>M. Steigerwald</i>
