R. Oppenheim
L.S. Shapley
P. Wolfe

1974

CONTENTS

Preface	v
Contents	vii
Albert William Tucker	1
Bibliography	4
In honor of A.W. Tucker's contributions to mathematical programming, <i>George B. Dantzig</i>	9
(1) Lower bounds for maximum diameters of polytopes, <i>I. Adler</i>	11
(2) Maximum diameter of abstract polytopes, <i>I. Adler and G.B. Dantzig</i>	20
(3) Existence of <i>A</i> -avoiding paths in abstract polytopes, <i>I. Adler, G.B. Dantzig and K.G. Murty</i>	41
(4) On two special classes of transportation polytopes, <i>M.L. Balinski</i>	43
(5) Solution rays for a class of complementarity problems, <i>R.W. Cottle</i>	59
(6) Fourier's analysis of linear inequality systems, <i>R.J. Duffin</i>	71
(7) Solving piecewise linear convex equations, <i>B.C. Eaves</i>	96
(8) On balanced matrices, <i>D.R. Fulkerson, A.J. Hoffman and R. Oppenheim</i>	120
(9) Derivation of a bound for error-correcting codes using pivoting techniques, <i>J.H. Griesmer</i>	133
(10) A new proof of the fundamental theorem of algebra, <i>H.W. Kuhn</i>	148
(11) Pivotal theory of determinants, <i>S. Maurer</i>	159
(12) A note of the Lemke–Howson method, <i>L.S. Shapley</i>	175
(13) Algorithm for a least-distance programming problem, <i>P. Wolfe</i>	190
