

Contents

1.	Introduction	1
1.1	The Strong Light Field	4
1.1.1	The Classical Nature of the Field	4
1.1.2	The Parameters of a Light Field	5
1.2	The Atom	7
1.2.1	One-Electron and Multi-Electron Approximations	7
1.2.2	The Structure of Atomic Spectra	8
1.2.3	Selection Rules	10
1.3	Interaction of an Atom and a Light Field	11
1.3.1	The Dipole Approximation	11
1.3.2	The Hamiltonian of the Dipole Interaction	13
1.3.3	An Atom in a Circularly Polarized Electromagnetic Field	16
1.3.4	The Floquet Theorem	18
1.3.5	Monochromatic Perturbation as a Stationary Problem	21
1.3.6	Exact Solutions	23
2.	Time-Dependent Perturbation Theory	24
2.1	First-Order Perturbation Theory	25
2.1.1	The System of Equations	25
2.1.2	The Probability of One-Photon Transitions	25
2.1.3	Monochromatic Perturbations	26
2.1.4	Sudden Perturbations	28
2.1.5	Large Perturbation Times	29
2.1.6	The Role of the Shape of the Envelope of the Electro- magnetic Field	30
2.1.7	Criteria of Applicability	30
2.2	Second-Order Perturbation Theory	31
2.2.1	Probability of a Two-Photon Transition	32
2.2.2	Transitions Induced by Two Perturbations	35
2.2.3	Large Perturbation Times	35
2.2.4	Sudden Perturbations	37
2.2.5	Criteria of Applicability	38
2.3	The Diagrammatic Technique for Monochromatic Perturbations ..	38
2.3.1	First-Order Perturbation Theory	39
2.3.2	Second-Order Perturbation Theory	40
2.3.3	The Rules for Constructing Diagrams	41
2.3.4	Partial Summation of Diagrams	42
2.4	Perturbation Theory of Arbitrary Order	43
2.4.1	The Amplitudes of Different Processes	43
2.4.2	Large Perturbation Times	43
2.4.3	Criteria for Applying Perturbation Theory of Arbitrary Order	44
2.4.4	Convergence of Expansion Series in Perturbation Theory	46

2.5	Monochromatic Perturbation and Degenerate States	46
2.5.1	A Single Degenerate Level	47
2.5.2	Mixing Degenerate Levels in a Field Due to the Presence of Other Levels	48
2.5.3	Near-Degenerate Levels	51
2.5.4	Time-Dependent Diagrams	52
2.5.5	Two-Photon Mixing of Degenerate States in Low-Frequency Fields	53
2.5.6	One-Photon Mixing of Degenerate States in Low-Frequency Fields	56
2.5.7	Competition Between One- and Two-Photon Mixing	57
2.5.8	Approximate Degeneracy	57
2.5.9	Criteria of Applicability	57
2.6	The Green's Function in Time-Dependent Perturbation Theory ..	59
2.6.1	The Green's Function	60
2.6.2	Application of the Green's Function	61
2.6.3	Realistic Atomic Potentials	62
3.	The Resonance Approximation	64
3.1	A Two-Level System in a Resonance Field	65
3.1.1	Wave Functions	66
3.1.2	Criteria of Applicability	68
3.1.3	Adiabatic Introduction of Perturbations	69
3.1.4	Sudden Perturbations	70
3.1.5	Adiabatic or Sudden Perturbation?	71
3.1.6	Quasi-Energies in the Resonance Case	72
3.2	Multi-Photon Resonance	73
3.2.1	Two-Photon Resonance	74
3.2.2	Criteria of Applicability	76
3.2.3	Multi-Photon Resonance	77
3.3	Degeneracy in a Resonance Field	79
3.3.1	Equations	79
3.3.2	Basis Solutions	80
3.3.3	Adiabatic Introduction of a Perturbation	81
3.3.4	Approximate Degeneracy	82
3.3.5	Degeneracy and the Influence of Light on an Atom	83
3.4	A Two-Level System in a Circularly Polarized Electromagnetic Field	83
3.4.1	Statement of the Problem	84
3.4.2	Solution and Discussion	84
3.5	A Two-Level System in a Resonance Field: Time-Dependent Parameters	85
3.5.1	The System of Equations	86
3.5.2	An Exactly Solvable Problem	86
3.5.3	The General Solution	87
3.6	A Three-Level System in Two Fields	89
3.6.1	Mixing in a Three-Level System	89
3.6.2	Zero Detuning	91
3.6.3	Population Inversion in a Three-Level System	91
4.	The Adiabatic Approximation	93
4.1	General Theory	94
4.1.1	The Landau-Dykhne Adiabatic Approximation	94
4.1.2	The Born-Fock Adiabatic Approximation	95

4.2	Bound-Bound Resonance Transitions	96
4.2.1	Transition Probability per Unit Time	96
4.2.2	Criterion of Applicability	98
4.2.3	The Limiting Transition in Perturbation Theory	99
4.2.4	Resonance Mixing in a Two-Level System	100
4.2.5	Transitions in Multi-Level Systems	102
4.3	A Two-Level System in a Strong Field of Arbitrary Frequency .	105
4.3.1	Adiabatic Wave Functions	105
4.3.2	Average Populations	109
4.3.3	Results, Limiting Cases, and a Comparison with Numerical Calculations	110
4.4	Transitions Between Degenerate States	112
4.4.1	Reducing the Problem Concerning Degenerate States to One Involving a System that Has a Constant Dipole Moment	113
4.4.2	Degeneracy and Transition Probability	114
4.5	Bound-Free Transitions	115
4.5.1	Comparison of the Perturbation in Discrete and Continuous States	116
4.5.2	Probability of a Transition in a Low-Frequency Field .	116
4.5.3	Limiting Cases	118
5.	Laser Radiation	120
5.1	Intensity of Radiation	121
5.1.1	Spatial-Temporal Distribution of the Intensity of Laser Radiation	121
5.1.2	Dependence of the Intensity on the Type, the Design, and the Mode of Operation of a Laser	123
5.1.3	Increasing the Intensity of Laser Radiation	125
5.1.4	Varying the Intensity of Laser Radiation	126
5.1.5	Measuring the Intensity of Radiation	127
5.2	Frequency of the Radiation	128
5.2.1	Changes in the Tunability and Spectral Narrowing	129
5.2.2	The Single-Mode Laser	130
5.2.3	The Measurement of Laser Frequency	130
5.3	The Polarization of the Radiation	131
5.4	The Monochromaticity of Laser Radiation	132
6.	Experimental Aspects	135
6.1	Atomic Target	136
6.2	Competing Processes	138
6.2.1	Collisions Between Identical Atoms	139
6.2.2	Collisions with Electrons	140
6.3	The Self-Induced Distortion of Intense Light in Atomic Targets	143
6.4	Experimental Methods for Studying the Phenomena Produced by Strong Electromagnetic Fields Interacting with Atoms	146
6.4.1	Detecting Ions	146
6.4.2	Absorption of Light	148
6.4.3	One-Photon Absorption	149
6.4.4	Two-Photon Absorption	150
6.4.5	Multi-Photon Ionization Spectroscopy	152
6.4.6	Detecting the Light Produced in the Target	154

6.5	The Measurement of the Main Parameters that Characterize the Interaction Between Intense Electromagnetic Radiation and an Atom	156
6.5.1	Degree of Nonlinearity	156
6.5.2	Multi-Photon Cross Sections	157
7.	Nonresonant Phenomena	161
7.1	Nonlinear Atomic Susceptibilities	163
7.1.1	The Scattering of Light and the Linear Susceptibility	164
7.1.2	The Nonlinear Scattering of Light and Nonlinear Susceptibility	166
7.1.3	Linear and Nonlinear Susceptibilities and the Perturbation of Atomic Spectra	168
7.2	Perturbation of Isolated Atomic States	170
7.2.1	Dynamic Polarizability of an Isolated Nondegenerate Atomic State	171
7.2.2	Dynamic Hyper-Polarizability	174
7.2.3	Criteria for Applying Perturbation Theory	175
7.2.4	The Dynamic Polarizability as a Function of the Perturbing Field	176
7.2.5	Experimental Data	177
7.3	Perturbation of Degenerate States	182
7.3.1	Two Adjacent Levels	182
7.3.2	The General Case	184
7.3.3	A Perturbation in an Elliptically Polarized Field	185
7.3.4	Perturbation of the Hydrogen Atom Spectrum	186
7.4	Nonlinear Scattering of Light	195
7.4.1	The Interrelation of Nonlinear Scattering Processes Due to an External Field	195
7.4.2	Spontaneous Two-Photon Scattering	197
7.4.3	Stimulated Two-Photon Emission	200
7.4.4	Hyper-Raman Scattering	201
7.4.5	Generation of the Third Harmonic	202
7.4.6	Other Processes Determined by $\chi^{(3)}$	205
7.5	Nonresonant, Nonlinear Ionization	208
7.5.1	The Mechanisms of Nonlinear Ionization	209
7.5.2	Numerical Estimates	209
7.6	Ionization in a Short-Range Potential	211
7.6.1	Tunneling Ionization	212
7.6.2	Ionization by a Circularly Polarized Field	212
7.6.3	Ionization by an Elliptically Polarized Field	218
7.6.4	The Intermediate Case ($\gamma^2 \sim 1$)	219
7.6.5	Nonlinear Detachment of an Electron from a Negatively Charged Ion	221
7.7	The Ionization of Atoms	221
7.7.1	The Power-Law Dependence of the Ionization Probability on the Field Strength	222
7.7.2	Dependence of the Multi-Photon Cross Section on the Frequency and the Degree of Ellipticity of the Light	223
7.7.3	Criteria for Applying Perturbation Theory	225
7.7.4	Calculation of Multi-Photon Cross Section and Their Comparison with Experimental Data	227
7.7.5	The Angular Distribution of the Emitted Photoelectrons	229
7.7.6	Tunneling Ionization of Atoms ($\gamma \ll 1$)	231
7.7.7	The Intermediate Case ($\gamma^2 \sim 1$)	232

8.	Resonance Phenomena	233
8.1	Spontaneous Emission of Light by an Atom in a Resonance Field	236
8.1.1	The Natural Line Width	236
8.1.2	The Lorentzian Line Shape	237
8.1.3	Spontaneous Emission of Photons in a Weak Resonance Field	239
8.1.4	Spontaneous Emission of Photons in a Strong Resonance Field	240
8.1.5	Introduction of an External Field into the Resonance Excitation	242
8.2	Resonance Fluorescence	243
8.2.1	A Weak External Field	243
8.2.2	Criterion for Applying Perturbation Theory	246
8.2.3	The Density-Matrix Method	247
8.2.4	Elastic (Rayleigh) Scattering in Strong Fields	249
8.2.5	Inelastic Scattering	251
8.2.6	Comparison with Experiment	257
8.2.7	The Bloch-Siegert Shift	259
8.2.8	The Test Field	261
8.2.9	Multi-Photon Resonance	262
8.3	Multi-Photon Excitation and Emission	263
8.3.1	Selection Rules for Multi-Photon Transitions	264
8.3.2	The Probability of Multi-Photon Bound-Bound Transitions	265
8.3.3	Quadrupole Transitions	267
8.3.4	Multi-Photon Mixing of Resonance States	269
8.3.5	Competing Processes in the Multi-Photon Excitation of Atoms	270
8.3.6	Stimulated Multi-Photon Emission	270
8.4	Spontaneous Raman Scattering	271
8.4.1	A Weak Perturbation	273
8.4.2	Raman Scattering Frequencies for a Strong Perturbation	274
8.4.3	The Probability of Raman Scattering Under the Influence of a Strong Perturbation	275
8.4.4	Multi-Photon Raman Scattering	277
8.5	A Three-Level System in Two Resonance Fields	278
8.5.1	The System of Equations	278
8.5.2	Perturbation Theory	279
8.5.3	A Strong External Field	282
8.5.4	Two Strong External Fields	284
8.6	Resonance Ionization of Atoms	285
8.6.1	Resonance Ionization in a Weak Field	286
8.6.2	Mechanisms of Resonance Ionization in a Strong Field	288
8.6.3	Multi-Photon Ionization in a Strong Field	290
8.6.4	Resonance Ionization in the Adiabatic Inversion Field	291
8.6.5	The Polarization of Electrons and Nuclei in the Event of Resonance Ionization	293
8.6.6	Angular Distribution of the Electrons in the Resonance Ionization Process	298
9.	Conclusion	300
9.1	The Role of the Non-monochromaticity of Laser Radiation	300
9.1.1	Direct Multi-Photon Ionization	302
9.1.2	Tunneling Ionization in a Variable Field	304
9.1.3	Multi-Photon Excitation of Atoms	305
9.1.4	Perturbation of Atomic Levels	306

9.2	Many-Electron Approximation	309
9.2.1	The Dynamic Polarization of the Atomic Core	309
9.2.2	Two-Electron Multi-Photon Ionization	311
9.3	Ultrahigh Fields	312
9.4	Highly Excited Atomic States in a Strong Electromagnetic Field	313
9.4.1	Radiative Transitions Between Highly Excited Atomic States	313
9.4.2	The Dynamic Polarizability of Highly Excited Atomic States	315
9.4.3	Multi-Photon Ionization of Highly Excited States	317
9.4.4	Tunneling Ionization from Highly Excited States	318
9.4.5	Stochastic Instability of the Classical Electron in a Variable Field and the Diffusion Ionization of Highly Excited Atoms	320
