

Contents

Preface	v
Introduction	ix
1. Representing Formal Systems in Logical Frameworks	1
Metalogical Frameworks	
<i>David A. Basin and Robert L. Constable</i>	1
Encoding of data types in Pure Construction Calculus: a semantic justification	
<i>Stefano Berardi</i>	30
Experience with FS_0 as a Framework Theory	
<i>Sean Matthews, Alan Smaill and David Basin</i>	61
Logical Support for Modularisation	
<i>Răzvan Diaconescu, Joseph Goguen and Petros Stefaneas</i>	83
2. Algorithms for Logical Environments	131
Algorithmic definition of lambda-typed lambda calculus	
<i>N. G. de Bruijn</i>	131
A Canonical Calculus of Residuals	
<i>Yves Bertot</i>	146
Order-Sorted Polymorphism in Isabelle	
<i>Tobias Nipkow</i>	164
3. Logical Issues	189
An Interpretation of Kleene's Slash in Type Theory	
<i>Jan Smith</i>	189
Inductive Data Types: Well-orderings Revisited	
<i>Healfdene Goguen and Zhaohui Luo</i>	198
Witness Extraction in Classical Logic through Normalization	
<i>Franco Barbanera and Stefano Berardi</i>	219
Finding the Answers in Classical Proofs: A Unifying Framework	
<i>Chetan R. Murthy</i>	247
Church-Rosser Property in Classical Free Deduction	
<i>Michel Parigot</i>	273

4. Experiments	297
Completing the Rationals and Metric Spaces in LEGO	
<i>Claire Jones</i>	297
A Machine Checked Proof that Ackermann's Function is not Primitive Recursive	
<i>Nora Szasz</i>	317
