<b>1</b>	<b>Introductory Survey. By F.E. Fujita (With 2 Figures)</b>	1
1.1	New Materials and Necessity of Physics in their Development.	1
1.2	Examples of Physics of New Materials.	2
1.3	Brief Introduction of the Contents	5
	References	9
<b>2</b>	<b>Electronic Structure and Properties of Transition Metal Systems.</b>	10
	By J. Kanamori (With 8 Figures)	10
2.1	Background.	10
2.2	Basic Concepts of Electronic Structure Calculation of Transition Metal Systems	11
2.2.1	Method of Calculation	11
2.2.2	s-d Mixing	13
2.3	Bulk and Defect Electronic Structure of Ferromagnetic Transition Metal Systems	15
2.3.1	Calculation for Periodic Systems	15
2.3.2	Impurities	16
2.3.3	Disordered Alloys	19
2.3.4	Failure of the <i>ab initio</i> Calculation	21
2.3.5	Enhancement of Ferromagnetism in Iron by Nonmagnetic Atoms	23
2.4	Structural Problems	24
2.4.1	Methods of Calculating Phase Diagram of Alloy Systems	24
2.4.2	Ordering of fcc Lattice	25
2.4.3	Examples of <i>ab initio</i> Calculations	27
2.4.4	Lattice Distortion	28
2.5	Limitation of the One Electron Theory	29
2.6	Future Development	31
	References	32
<b>3</b>	<b>Structure Characterization of Solid-State Amorphized Materials by X-Ray and Neutron Diffraction. By K. Suzuki (With 32 Figures)</b>	34
3.1	New Generation Scattering Experiments.	34

<b>3.2</b>	<b>Mechanical Alloying and Mechanical Disorder</b> . . . . .	35
3.2.1	Mechanical Amorphization of Ni-V Miscible System . . . . .	35
3.2.2	Mechanical Amorphization of Cu-Ta and Cu-V Immiscible Systems . . . . .	43
<b>3.3</b>	<b>Medium-Range Structure of Metallic Amorphous Alloys . . . . .</b>	46
3.3.1	Pre-peak in the Structure Factor of Binary Amorphous Alloys . . . . .	46
3.3.2	Chemical Frustration in Ternary Amorphous Alloys . . . . .	48
<b>3.4</b>	<b>Conversion of Organic Polymers to Amorphous Ceramics . . . . .</b>	52
<b>3.5</b>	<b>Hydrogen-Induced Amorphization . . . . .</b>	55
	<b>References . . . . .</b>	63
<b>4</b>	<b>Nanophase Materials: Synthesis, Structure, and Properties.</b>	65
	By R. W. Siegel (With 30 Figures) . . . . .	65
4.1	Background . . . . .	65
4.2	Synthesis and Processing . . . . .	67
4.3	Structure and Stability . . . . .	77
4.3.1	Grains and Pores . . . . .	78
4.3.2	Grain Boundaries . . . . .	80
4.3.3	Grain Size Stability . . . . .	89
4.4	Properties . . . . .	91
4.4.1	Chemical Properties . . . . .	92
4.4.2	Mechanical Properties . . . . .	95
4.4.3	Physical Properties . . . . .	99
4.5	Future Directions . . . . .	101
	References . . . . .	102
<b>5</b>	<b>Intercalation Compounds of Transition-Metal Dichalcogenides.</b>	106
	By K. Motizuki and N. Suzuki (With 20 Figures) . . . . .	106
5.1	Background . . . . .	106
5.2	Electronic Band Structures of 3d Transition-Metal Intercalated Compounds of 1T-Type $TiS_2$ . . . . .	108
5.2.1	Nonmagnetic States . . . . .	112
5.2.2	Ferromagnetic States . . . . .	119
5.2.3	Comparison with Experimental Results . . . . .	120
5.3	Bonding Nature in $M_xTiS_2$ ( $M$ : 3d Transition-Metal) . . . . .	122
5.4	Electronic Band Structures of $Ag_xTiS_2$ . . . . .	127
5.5	2H-Type $TX_2$ ( $T$ = Nb, Ta; $X$ = S, Se) Intercalated with Transition-Metals . . . . .	129
5.6	Discussion . . . . .	135
	References . . . . .	137
<b>6</b>	<b>Structural Phase Transformation.</b> By F.E. Fujita (With 40 Figures) . . . . .	139
6.1	General View . . . . .	139

6.1.1	Discoveries of Phase Transformations . . . . .	139
6.1.2	Continuous and Discontinuous Transformation . . . . .	142
6.1.3	Various Types of Phase Transitions . . . . .	144
6.2	A Phenomenological Theory and a Statistical View of Phase Transition. . . . .	145
6.2.1	Degree of Order and Landau's Formulation of Phase Transition. . . . .	145
6.2.2	Ehrenfest's Criterion and Landau's Picture in the G-T- $\eta$ Diagram . . . . .	147
6.2.3	Fine Heterogeneous Structure in the First Order Transition . . . . .	148
6.2.4	Statistical Calculation of Embryonic Structure . . . . .	149
6.3	Martensitic Transformation of Metals and Alloys . . . . .	151
6.3.1	Martensitic Transformation of Steel . . . . .	151
6.3.2	Lattice Deformation in Martensitic Transformation . . . . .	154
6.3.3	Martensitic Transformation of $\beta$ -Phase Alloys . . . . .	158
6.4	Shape Memory Effect and Premartensitic Phenomena. . . . .	160
6.4.1	Mechanism of Shape Memory. . . . .	160
6.4.2	Superplasticity and Ferroelasticity . . . . .	163
6.4.3	Lattice Softening and Soft Phonon Mode . . . . .	165
6.4.4	Premartensitic Structure and its Statistical Thermodynamic Theory . . . . .	168
6.5	Martensite and Other Problems in Ceramics . . . . .	172
6.5.1	Martensitic Transformation of Zirconia . . . . .	172
6.5.2	P-T Phase Diagram and Artificial Diamond . . . . .	173
6.5.3	CVD Diamond. . . . .	176
6.6	Conclusions. . . . .	177
	References . . . . .	178
7	<b>The Place of Atomic Order in the Physics of Solids and in Metallurgy.</b> By R.W. Cahn (With 21 Figures). . . . .	179
7.1	Historical Development. . . . .	179
7.1.1	Superlattices . . . . .	182
7.1.2	Imperfect Long-Range Order . . . . .	184
7.1.3	Critical Phenomena . . . . .	187
7.2	Antiphase Domains . . . . .	188
7.2.1	Varieties of Domains . . . . .	191
7.3	Theory of Ordering . . . . .	193
7.3.1	The Ordering Energy . . . . .	193
7.3.2	The Cluster Variation Model . . . . .	194
7.3.3	Criticality-Physics . . . . .	195
7.3.4	Prediction of Phase Diagrams. . . . .	196
7.3.5	Prediction of Crystal Structures. . . . .	197
7.3.6	First-Principles Calculations. . . . .	198
7.4	Special Experimental Methods. . . . .	201

<b>7.5 Ordering Kinetics and Disorder Trapping.</b>	204
7.5.1 Disorder Trapping.	204
7.5.2 Phases with Low Critical Temperatures	206
7.5.3 Rapidly Ordering Phases.	207
<b>7.6 Computer Simulation of Ordering and Disordering and Related Features.</b>	208
<b>7.7 Ordering and Disordering at Free Surfaces, Interfaces and at Antiphase Domain Boundaries.</b>	209
7.7.1 Free Surfaces	209
7.7.2 Interfaces	211
<b>7.8 Magnetic and Atomic Order.</b>	212
7.8.1 Directional Order	213
<b>7.9 Ordering in Semiconductors and Other Non-Metals.</b>	215
7.9.1 Minerals.	215
7.9.2 Semiconductors	215
7.9.3 Superconductors	217
7.9.4 Constitutional Vacancies	218
7.9.5 Plastic Crystals.	218
<b>7.10 Order and Mechanical Properties.</b>	218
<b>7.11 Conclusion</b>	221
