

Table of Contents

Introduction	1
------------------------	---

Part 1 Mathematical Background

Topology and Geometry

The Khalimsky Line as a Foundation for Digital Topology	3
<i>Ralph Kopperman</i>	

Topological Foundations of Shape Analysis	21
<i>Vladimir A. Kovalevsky</i>	

A New Concept for Digital Geometry	37
<i>Vladimir A. Kovalevsky</i>	

Theoretical Approaches to N -Dimensional Digital Objects	53
<i>Klaus Voss</i>	

On Boundaries and Boundary Crack-Codes of Multidimensional Digital Images	71
<i>T. Yung Kong</i>	

Studying Shape Through Size Functions	81
<i>Claudio Uras and Alessandro Verri</i>	

Categorical Shape Theory

Introduction to Categorical Shape Theory, with Applications in Mathematical Morphology	91
<i>Mirek Hušek</i>	

Shape Theory: an ANR-Sequence Approach	111
<i>Jack Segal</i>	

Can Categorical Shape Theory Handle Grey-level Images?	127
<i>Timothy Porter</i>	

Part 2 Local Extraction**Mathematical Morphology**

Mathematical Morphology as a Tool for Shape Description	147
<i>Henk J.A.M. Heijmans</i>	
On Information Contained in the Erosion Curve	177
<i>Juliette Mattioli and Michel Schmitt</i>	
Morphological Area Openings and Closings for Grey-scale Images	197
<i>Luc Vincent</i>	
Manifold Shape: from Differential Geometry to Mathematical Morphology	209
<i>Jos B.T.M. Roerdink</i>	
On Negative Shape	225
<i>Pijush K. Ghosh</i>	

Wavelets

An Overview of the Theory and Applications of Wavelets	249
<i>Björn Jawerth and Wim Sweldens</i>	
Fractal Surfaces, Multiresolution Analyses, and Wavelet Transforms	275
<i>Jeffrey S. Geronimo, Douglas P. Hardin, and Peter R. Massopust</i>	
Interpolation in Multiscale Representations	291
<i>Charles H. Anderson and Subrata Rakshit</i>	

Part 3 Theory of Shape**Keynote Address**

Discrete Stochastic Growth Models for Two-Dimensional Shapes	301
<i>Scott Thompson and Azriel Rosenfeld</i>	

Differential Geometry

Classical and Fuzzy Differential Methods in Shape Analysis	319
<i>David H. Foster</i>	
Elements of a Fuzzy Geometry for Visual Space	333
<i>Mario Ferraro and David H. Foster</i>	
On the Relationship Between Surface Covariance and Differential Geometry	343
<i>Jens Berkmann and Terry Caelli</i>	
Image Representation Using Affine Covariant Coordinates	353
<i>Jun Zhang</i>	

Theory of Shape Perception

Equivariant Dynamical Systems: a Formal Model for the Generation of Arbitrary Shapes	363
<i>William C. Hoffman</i>	
Neural Processing of Overlapping Shapes	383
<i>André J. Noest</i>	
Contour Texture and Frame Curves for the Recognition of Non-Rigid Objects	393
<i>J. Brian Subirana-Vilanova</i>	

Part 4 Symbolic Representation

Shape Primitives

Conic Primitives for Projectively Invariant Representation of Planar Curves	403
<i>Stefan Carlsson</i>	
Blind Approximation of Planar Convex Shapes	415
<i>Michael Lindenbaum and Alfred M. Bruckstein</i>	
Recognition of Affine Planar Curves Using Geometric Properties	423
<i>Craig Gotsman and Michael Werman</i>	
Recognizing 3-D Curves from a Stereo Pair of Images: a Semi-differential Approach	433
<i>Theo Moons, Eric J. Pauwels, Luc J. Van Gool, Michael H. Brill, and Eamon B. Barrett</i>	
Statistical Shape Methodology in Image Analysis	443
<i>John T. Kent and Kanti V. Mardia</i>	
Recognition of Shapes from a Finite Series of Plane Figures	453
<i>Nikolai M. Sirakov</i>	
Polygonal Harmonic Shape Characterization	463
<i>Anthony J. Maeder, Andrew J. Davison, and Nigel N. Clark</i>	
Shape Description and Classification Using the Interrelationship of Structures at Multiple Scales	473
<i>Gregory Dudek</i>	
Learning Shape Classes	483
<i>Stanley M. Dunn and Kyugon Cho</i>	

Hierarchical Representation

Inference of Stochastic Graph Models for 2-D and 3-D Shapes	493
<i>Jakub Segen</i>	

Hierarchical Shape Analysis in Grey-level Images	511
<i>Annick Montanvert, Peter Meer, and Pascal Bertolino</i>	
Irregular Curve Pyramids	525
<i>Walter G. Kropatsch and Dieter Willersinn</i>	
Multiresolution Shape Description by Corners	539
<i>Cornelia Fermüller and Walter G. Kropatsch</i>	
Model-based Bottom-Up Grouping of Geometric Image Primitives	549
<i>Peter Nacken and Alexander Toet</i>	
Hierarchical Shape Representation for Image Analysis	559
<i>O Ying-Lie</i>	

Part 5 Evolutionary Systems

Evolutionary Representation

Scale-Space for N -dimensional Discrete Signals	571
<i>Tony Lindeberg</i>	
Scale-Space Behaviour and Invariance Properties of Differential Singularities	591
<i>Tony Lindeberg</i>	
Exploring the Shape Manifold: the Role of Conservation Laws	601
<i>Benjamin B. Kimia, Allen R. Tannenbaum, and Steven W. Zucker</i>	
Performance in Noise of a Diffusion-based Shape Descriptor	621
<i>Murray H. Loew and Sheng-Yuan Hwang</i>	
Towards a Morphological Scale-Space Theory	631
<i>Rein van den Boomgaard and Arnold W.M. Smeulders</i>	
Geometry-based Image Segmentation Using Anisotropic Diffusion	641
<i>Ross T. Whitaker and Stephen M. Pizer</i>	

Multiscale Description

Images: Regular Tempered Distributions	651
<i>Luc M. J. Florack, Bart M. ter Haar Romeny, Jan J. Koenderink, and Max A. Viergever</i>	
Local and Multilocal Scale-Space Description	661
<i>Alfons H. Salden, Bart M. ter Haar Romeny, and Max A. Viergever</i>	

List of Authors	671
