

Contents

	Preface	vii
	Introduction	ix
I	FOUNDATIONS	1
1	Logic and Learning Daniel N. Osherson, Michael Stob, and Scott Weinstein	3
2	Learning Theoretical Terms Ranan B. Banerji	25
3	How Loading Complexity is Affected by Node Function Sets Stephen Judd	49
4	Defining the Limits of Analogical Planning Diane J. Cook	65
II	REPRESENTATION AND BIAS	81
5	Learning Hard Concepts through Constructive Induction: Framework and Rationale Larry Rendell and Raj Seshu	83
6	Learning Disjunctive Concepts Using Domain Knowledge Harish Ragavan and Larry Rendell	143
7	Learning in an Abstraction Space George Drastal	163
8	Binary Decision Trees and an “Average-Case” Model for Concept Learning: Implications for Feature Construction and the Study of Bias Raj Seshu	213
9	Refining Algorithms with Knowledge-Based Neural Networks: Improving the Chou-Fasman Algorithm for Protein Folding Richard Maclin and Jude W. Shavlik	249
III	SAMPLING PROBLEMS	287
10	Efficient Distribution-free Learning of Probabilistic Concepts Michael J. Kearns and Robert E. Schapire	289

11	VC Dimension and Sampling Complexity of Learning Sparse Polynomials and Rational Functions Marek Karpinski and Thorsten Werther	331
12	Learning from Data with Bounded Inconsistency: Theoretical and Experimental Results Haym Hirsh and William W. Cohen	355
13	How Fast Can a Threshold Gate Learn? Wolfgang Maass and György Turán	381
14	When Are k-Nearest Neighbor and Backpropagation Accurate for Feasible-sized Sets of Examples? Eric B. Baum	415
IV	EXPERIMENTAL	443
15	Comparing Connectionist and Symbolic Learning Methods J. R. Quinlan	445
16	Weight Elimination and Effective Network Size Andreas S. Weigend and David E. Rumelhart	457
17	Simulation Results for a New Two-armed Bandit Heuristic Ronald L. Rivest and Yiqun Yin	477
18	Hard Questions about Easy Tasks: Issues from Learning to Play Games Susan L. Epstein	487
19	Experiments on the Transfer of Knowledge between Neural Networks Lorien Y. Pratt	523
	Contributors	561
	Index	563
