### GENERAL 1

- 1      **'The finite element modelling of three-dimensional time-harmonic electromagnetic fields'**  
*G Mur*  
*Delft University of Technology, Netherlands*
- 5      **'Near and far field modelling of p.e.c.cavity-backed apertures by a mixed finite and infinite element method'**  
*J A R Macnab*  
*DRA Farnborough, UK*  
*M S Towers and A McCowen*  
*University College Swansea, UK*
- 8      **'Computation of 3-D capacitances of transmission-line discontinuities with the boundary-element method'**  
*G Mäder and F H Uhlmann*  
*University of Technology Ilmenau, Germany*
- 12     **'TLM and Maxwell's equations'**  
*M Krumpholz and P Russer*  
*Ferdinand-Bruan-Institut für Höchstfrequenztechnik, Germany*

### Finite Elements – Low Frequency I

- 16     **'Numerical calculation of temperature distribution in the melt of induction crucible furnaces'**  
*G Henneberger and R Obrecht*  
*University of Technology Aachen, Germany*
- 20     **'Modelling of dynamical behaviours of electro-magneto-mechanical coupled systems'**  
*Z Ren and A Razek*  
*Laboratoire De Génie Electrique De Paris, France*
- 24     **'Simulation of the dynamic performance of non-linear electro-mechanical systems'**  
*D S Smith and D Howe*  
*University of Sheffield, UK*
- 28     **'Comparison between finite element and integral equation modelling of power busbar systems'**  
*O Bottauscio and D Chiarabaglio*  
*Istituto Elettrotecnico Nazionale Galileo Ferraris, Italy*  
*E Cardelli*  
*Universita di Perugia, Italy*  
*M Chiampi*  
*Politecnico di Torino, Italy*  
*M Gimignani and M Raugi*  
*Universita di Pisa, Italy*

### **MODAL AND RAY METHODS**

- 32      **'Analysis of multilayered semiconductor leaky rib waveguides'**  
*G M Berry and S V Burke*  
*University of Wales College of Cardiff, UK*  
*J Heaton*  
*Defence Research Agency, UK*
- 36      **'Modal theory of eddy currents in thin circular plates'**  
*P P Silvester*  
*McGill University, Canada*  
*Z Chen*  
*Technical University of Nova Scotia, Canada*
- 40      **'An impedance UTD model for the prediction of terrain undulation and roughness effects in radiating systems'**  
*M M Poulouse*  
*Instiuitut Teknologi Brunei, Brunei*
- 44      **'Convergency study of an algorithm to design dual band polarizers'**  
*J L Fontecha and C Cagigal*  
*DETYCOM AIE, Spain*

### **Finite Element/Boundary Integral Methods – Low Frequency**

- 48      **'Simulation of travelling electric field manipulation of bioparticles'**  
*M P Hughes, X-B Wang, J P H Burt, R Pethig and L R Watkins*  
*University of Wales Bangor, UK*
- 52      **'A 2D dynamic formulation for non-linear finite element modelling of Terfenol-D rods'**  
*M E H Benbouzid, G Reyne and G Meunier*  
*Laboratoire d'Electrotechnique de Grenoble, France*
- 56      **'A computational study of localised loss in a distribution transformer'**  
*A Basak, G Lloyd and C H Yu*  
*University of Wales College of Cardiff, UK*
- 60      **'Design optimization using the BEM coupled with genetic algorithm'**  
*J A Vasconcelos*  
*UFMG, Brazil*  
*L Krähenbühl, L Nicolas and A Nicolas*  
*Centre de Genie Electrique de Lyon, France*

### **NETWORK METHODS AND NEURAL ALGORITHM**

- 64      **'An equivalent electric network model for non-linear 3-D magnetostatic field analysis'**  
*M Gimignani, A Musolino and M Raugi,*  
*Universita di Pisa, Italy*
- 68      **'Non-Linear magnetic and electric equivalent circuit models for transient and harmonic analysis of power transformers and traction systems'**  
*L Haydock*  
*Nottingham Trent University, UK*  
*S A Holland*  
*Brush Transformers Ltd, UK*
