Vorwort	XV
Preface	XVII
Part A	
I Zusammenfassungen	3
1 Epidemiologie der Allergien und Intoleranzen durch Lebensmittel und Lebensmitteladditiva: das Problem der Validität der Daten	3
<i>Brunello Wüthrich</i>	
2 Epidemiologie von Lebensmittelallergien	4
<i>Torsten Schäfer und Johannes Ring</i>	
3 Klassifizierung nahrungsmittelbedingter Unverträglich- keitsreaktionen	5
<i>Johannes Ring</i>	
4 Methoden zur Erfassung von lebensmittelbedingten Allergien	6
<i>Jürgen Knop und Joachim Saloga</i>	
5 Lebensmittelallergie – der Weg der Sensibilisierung und seine Bedeutung für die Risikoeinschätzung	8
<i>Charlotte Madsen</i>	
6 MHC-Moleküle und Antigenprozessierung	9
<i>Hans-Georg Rammensee</i>	
7 Strategien einer prospektiven Allergenizitätstestung	10
<i>Andreas Radbruch</i>	
8 Molekulare Grundlagen der Allergencharakterisierung	11
<i>Kjell Åas</i>	

9	Charakterisierung von pflanzlichen Allergenen <i>Wolf-Meinhard Becker</i>	12
10	Labile und stabile Allergene in pflanzlichen Lebensmitteln <i>Stefan Vieths, Holger Aulepp, Wolf-Meinhard Becker und Lieselotte Buschmann</i>	13
11	Mikrobielle Allergene <i>Martin Schata</i>	14
12	Allergene Proteine im Reis: Strategien zur Verminderung und Bewertung <i>Tsukasa Matsuda, Masahiro Nakase, Takahiro Adachi, Ryo Nakamura, Yuichi Tada, Hiroaki Shimada, Masayoshi Taka- hashi und Tatsuhito Fujimura</i>	14
13	Transgene Fische: Stand der Forschung <i>Thomas T. Chen</i>	15
14	Bewertung der Allergenität von Lebensmittelproteinen <i>Geert F. Houben und André H. Penninks</i>	16
15	Transgene Sojabohnen mit Paranuß 2S Speicherprotein: Aspekte möglicher Allergierisiken <i>J. A. Nordlee, S. L. Taylor, J. A. Townsend, L. A. Thomas und Larry R. Beach</i>	17
16	Sicherheitsstrategien hinsichtlich Allergie durch bio- industrielle Enzyme in der Lebensmittelherstellung <i>Torben B. Sørensen</i>	17
17	Allergenes Potential von gentechnisch veränderten Pflanzen <i>Roy L. Fuchs</i>	18
II	Hauptschlußfolgerungen und Empfehlungen	20
Part B		
I	Clinical Aspects, Epidemiology, Validity of Data	31
1	Epidemiology of Allergies and Intolerances Caused by Foods and Food Additives: The Problem of Data Validity <i>Brunello Wüthrich</i>	31
1.1	Abstract	31
1.2	Introduction	32
1.3	Definition of adverse reactions to food	33

Contents

1.4	Symptoms of food allergy	34
1.5	Prevalence of adverse reactions to food	35
1.6	The problem of data validity	37
1.7	Conclusion	38
1.8	References	38
2	Epidemiology of Adverse Food Reactions Due to Allergy or Other Forms of Hypersensitivity	40
	<i>Torsten Schäfer and Johannes Ring</i>	
2.1	Abstract	40
2.2	Introduction	41
2.3	Definitions	41
2.4	Epidemiological methodology	42
2.5	Allergen sources – quantity and quality	43
2.6	Frequency of food allergies in general population	43
2.6.1	Studies using questionnaire, skin prick test and/or RAST	43
2.6.2	Studies using oral provocation tests	43
2.6.3	Own results	44
2.7	Associations of adverse food reactions (allergy/hypersensi- tivity)	48
2.7.1	Association with age and natural course	48
2.7.2	Association with gender	48
2.7.3	Adjuvant factors	49
2.7.4	Allergen avoidance	49
2.8	Prevention of food allergy	52
2.9	Conclusion	52
2.10	References	53
3	Classification of Adverse Food Reactions	55
	<i>Johannes Ring</i>	
3.1	Abstract	55
3.2	Introduction	55
3.3	Clinical symptomatology	56
3.3.1	Urticaria and angioedema	56
3.3.2	Anaphylaxis and anaphylactoid reactions	57
3.3.3	Atopic eczema	57
3.3.4	Allergic contact eczema	57
3.3.5	Photosensitization	57
3.3.6	Gastroenteritis	58
3.3.7	Gluten-sensitive enteropathy and dermatitis herpetiformis (Dühring)	58
3.3.8	Allergic (leucocytoclastic) vasculitis	58
3.3.9	Eco-syndrome (clinical ecology syndrome)	58
3.4	Pathophysiology	59

Contents

3.5	Allergic reactions	60
3.6	Mechanisms of sensitization	60
3.7	Idiosyncrasy/Pseudo-allergy	61
3.8	Eliciting substances of adverse food reactions	61
3.9	Conclusion	61
3.10	References	62
4	Discussion of Methods for Detection of Food Allergies	65
	<i>Jürgen Knop and Joachim Saloga</i>	
4.1	Abstract	65
4.2	Introduction	67
4.3	Clinical history	68
4.4	In vitro tests	68
4.5	Skin tests	69
4.6	Elimination diets	70
4.7	Food challenge	71
4.8	Conclusion and future directions	72
4.9	References	73
5	Allergy to Food – The Significance of Route of Sensitization to Risk Assessment	75
	<i>Charlotte Madsen</i>	
5.1	Abstract	75
5.2	Introduction	75
5.3	Sensitization in humans younger than two years of age	76
5.4	Sensitization in humans older than two years of age	77
5.5	Contact allergens	78
5.6	Conclusion	78
5.7	References	79
II	Molecular Basis of Allergenicity and Allergen Characterization	81
6	Physiological Function of MHC Molecules	81
	<i>Hans-Georg Rammensee</i>	
6.1	Abstract	81
6.2	Introduction	82
6.3	Peptide ligands of MHC class I molecules	84
6.4	Peptide ligands of MHC class II molecules	95
6.5	Conclusion	100
6.6	Further reading	100

Contents

7	Strategies for Prospective Testing	101
	<i>Andreas Radbruch</i>	
7.1	Abstract	101
7.2	Introduction	101
7.3	Processing and presentation of antigen: the genetic basis of immune responsiveness	102
7.4	Choice of immune response: inflammation versus allergy .	103
7.5	Setup and evaluation of in vitro immune reactions	105
7.6	A prospective in vitro test system	106
7.7	References	107
8	Molecular Basis of Allergen Characterization	108
	<i>Kjell Åas</i>	
8.1	Abstract	108
8.2	Allergy	109
8.2.1	Allergy immunology	109
8.2.2	Allergy in biology and experiments	109
8.3	Food allergens	109
8.3.1	Immunogenicity and antigenicity	110
8.3.2	Allergenic potency	110
8.3.3	Major, intermediate and minor allergens	110
8.3.4	Denaturation	110
8.4	Epitopes	111
8.4.1	Epitope structure	111
8.5	The mast cell amplifier	111
8.6	Immunogenicity and allergenicity	112
8.6.1	Allergen characterization	112
8.6.2	IgE preference?	113
8.7	Allergen research	113
8.7.1	Isoallergens	113
8.7.2	A model in epitope research	113
8.7.3	Allergen research depends on appropriate patients . . .	114
8.7.4	Allergen M in codfish	115
8.7.5	Several epitopes reacting with same or different antibodies	115
8.7.6	Allergenic epitope structure	115
8.8	Modern techniques	117
8.8.1	Monoclonal antibodies and DNA recombinant techniques .	117
8.9	References	118
9	Characterization of Allergens from Plants	119
	<i>Wolf-Meinhard Becker</i>	
9.1	Abstract	119
9.2	Introduction	119
9.2.1	Definition of allergens	119

Contents

9.2.2	Issues of allergen characterization	120
9.2.3	Line of approach to characterize allergens	120
9.3	Separation techniques in allergen characterization and their combination with immunological methods	121
9.3.1	Electrophoretic separation methods	121
9.3.2	Transfermembranes	122
9.3.3	Blotting methods	122
9.3.4	IEF/SDS-PAGE/2-D electrophoresis/immunoblotting	123
9.4	Immunological tools to identify and quantify allergens	124
9.5	Chemical methods to characterize allergens	125
9.6	Strategies of molecular cloning of allergens	126
9.6.1	Isolation of mRNA from the allergenic source	126
9.6.2	Preparing and immunoscreening a cDNA library	127
9.7	Conclusion	128
9.8	References	128
10	Characterization of Labile and Stable Allergens in Foods of Plant Origin	130
	<i>Stefan Vieths, Holger Aulepp, Wolf-Meinhard Becker and Lieselotte Buschmann</i>	
10.1	Abstract	130
10.2	Introduction	130
10.2.1	Subject	130
10.2.2	Terms	131
10.2.3	Allergenicity of processed plant foods	131
10.2.4	Plant food allergies	133
10.2.4.1	"Classical" food allergies	133
10.2.4.2	Pollen related food allergies	133
10.2.5	Food allergy and cross-reactivity	134
10.3	Characteristics of important plant food allergens	136
10.3.1	Profilins	136
10.3.2	The major apple allergen Mal d 1 and other plant food allergens of the "Bet v 1-family"	138
10.3.3	Celery	140
10.3.4	Peanut	143
10.4	Concluding remarks	147
10.5	Acknowledgements	148
10.6	References	148
11	Allergens from Microorganisms	150
	<i>Martin Schata</i>	
11.1	Abstract	150
11.2	Introduction	150
11.3	The biology and classification of moulds	153

Contents

11.4	Occurrence of moulds in different environments	154
11.5	Food contamination and fungal enzymes in food engineering	155
11.6	Characterized allergens of moulds	156
11.7	References	159
III	The Input of Molecular Biology: Transgenic Foods	161
12	Allergenic Proteins in Rice: Strategies for Reduction and Evaluation	161
	<i>Tsukasa Matsuda, Masahiro Nakase, Takahiro Adachi, Ryo Nakamura, Yuichi Tada, Hiroaki Shimada, Masayoshi Takahashi and Tatsuhito Fujimura</i>	
12.1	Abstract	161
12.2	Allergenic proteins in rice	161
12.3	Cloning of rice allergen genes	162
12.3.1	cDNA cloning and deduced amino acid sequences of rice allergens	162
12.3.2	Cloning of rice allergen genomic DNA	163
12.4	Repression of allergen expression by antisense RNA	163
12.4.1	Construction of antisense allergen genes	164
12.4.2	Introduction of antisense allergen genes into rice	165
12.5	Allergen analyses for transgenic rice plants	165
12.6	The transmission and expression of the introduced antisense gene among the transformant progeny	167
12.7	Acknowledgement	168
12.8	References	168
13	Current Status of the Transgenic Fish Research	170
	<i>Thomas T. Chen</i>	
13.1	Abstract	170
13.2	Introduction	170
13.3	Growth promoting effects of recombinant growth hormone	172
13.4	Production of transgenic fish	173
13.4.1	Gene transfer method	173
13.4.2	Identification and characterization of transgenic fish	175
13.5	Growth hormone and insulin-like growth factor transgenic fish	176
13.6	Other transgenic fish	178
13.7	Applications and perspectives	179
13.8	References	180

IV	Strategies of Safety Evaluation	183
14	Evaluation of the Allergenicity of Food Proteins – Current Testing Possibilities and New Developments Focused on the Role of the Gastro-Intestinal Tract Physiology . . . <i>Geert F. Houben and André H. Penninks</i>	183
14.1	Abstract	183
14.2	Introduction: adverse reactions to food	184
14.3	Mechanisms of allergy	185
14.4	The atopic syndrome and IgE-mediated (food) allergy . . .	185
14.5	Food allergens	186
14.6	Modification of the allergenicity of dietary proteins . . .	187
14.7	Novel foods and novel food ingredients	188
14.8	Current testing possibilities for the evaluation of the allergenicity of food proteins	188
14.8.1	In vivo antigenicity assays	188
14.8.2	Physico-chemical and immunochemical analyses	189
14.8.3	Mast cell and basophile degranulation tests	190
14.9	The role of the gastro-intestinal tract physiology in food allergy	191
14.10	New approaches in food allergy research and allergenicity testing: the role of the gastro-intestinal tract physiology .	192
14.10.1	Gastro-intestinal digestion modelling	192
14.10.2	Intestinal epithelial passage modelling	194
14.10.3	A refined approach in food allergenicity research	194
14.11	References	195
15	Transgenic Soybeans Containing Brazil Nut 2S Storage Protein: Issues Regarding Allergenicity <i>J. A. Nordlee, S. L. Taylor, J. A. Townsend, L. A. Thomas and Larry R. Beach</i>	196
15.1	Abstract	196
15.2	Introduction	196
15.3	Materials and methods	198
15.3.1	Sera	198
15.3.2	Seeds and proteins	198
15.3.3	RAST inhibition	198
15.3.4	Immunoblotting	198
15.4	Results	199
15.4.1	RAST inhibition	199
15.4.2	SDS-PAGE	199
15.4.3	Immunoblotting	199
15.5	Discussion	200
15.6	References	201

Contents

16	Safety Strategies Regarding Allergy to Bioindustrial Enzymes in Food-Processing	203
	<i>Torben B. Sørensen</i>	
16.1	Abstract	203
16.2	Introduction	203
16.2.1	The use of enzymes in food processing	204
16.2.2	Production of bioindustrial enzymes	204
16.2.3	Applications and types of enzymes	205
16.3	Safety assessment strategy	206
16.3.1	Inborn product safety; microorganisms, enzyme products	206
16.3.2	Genetically modified organisms for production of enzymes	207
16.4	Allergy	207
16.4.1	Enzyme products	208
16.4.2	Applications	209
16.4.3	Possible risk groups	209
16.5	Surveillance of adverse reactions	210
16.6	Conclusion	211
16.7	References	211
17	Assessment of the Allergenic Potential of Foods Derived from Genetically Engineered Plants: Glyphosate Tolerant Soybean as a Case Study	212
	<i>Roy L. Fuchs</i>	
17.1	Abstract	212
17.2	Introduction	213
17.3	The source	213
17.4	Host	215
17.5	Introduced protein(s)	216
17.6	References	219
V	Main Conclusions and Recommendations	223
