### I-ELECTRICAL MACHINES

|                                                                                                                                                                                     |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| A model for the saturated salient-pole synchronous machine<br>E. Dejaeger and M.S. Garrido                                                                                          | 3  |
| Synchronous machine models including saturation effects<br>M. Crappe and B. Mpanda-Mabwe                                                                                            | 9  |
| Consideration of saturation effects in modelling a squirrel cage<br>induction machine used in vector control<br>B. Semail, F. Bouillault, and A. Razek                              | 17 |
| Magnetic modelling of skewed slots machines accounting for<br>electric circuit: Applications to DC machines<br>W. Long, F. Piriou, and A. Razek                                     | 23 |
| Group theory and electromagnetic field calculation in permanent-<br>magnet synchronous motors.<br>P. Chelius, B. Davat, and M. Lajoie-Mazenc                                        | 29 |
| Design of induction motor variable-speed drives based on a two-<br>dimensional analytical analysis of the magnetic field in the air-gap<br>and the slots<br>E. Bolte and D. Gerling | 35 |
| Simulation of induction machine operation with step-by-step finite<br>element method coupled with mechanical equation<br>E. Vassent, G. Meunier, A. Foggia, and J.C. Sabonnadiere   | 41 |
| Current shapes leading to a constant torque<br>E. Favre and M. Jufer                                                                                                                | 47 |
| Synchronous permanent magnet machine owning windings<br>in the airgap<br>B. Laporte, C. Berenger, and P. Manfe                                                                      | 53 |
| Homogenization for nonlinear problems applied to the<br>modelling of transformers.<br>J.-M. Dedulle, G. Meunier, L. Pierrat, and J.C. Sabonnadiere                                  | 59 |

|                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A comparison of some nonlinear algorithms for optimum<br>design of magnetostatic problems<br>R.R. Saldanha, J.L. Coulomb, A. Foggia, and J.C. Sabonnadiere | 65  |
| Modelling of doubly-fed asynchronous machines: Application<br>to a voltage supply<br>M. Machmoum, M. Cherkaoui, F.M. Sargos, and A. Rezzoug                | 71  |
| Experimental modeling of a synchronous machine-chopper<br>system using standstill normal operating records<br>I. Kamwa, P. Viarouge, and E.J. Dickinson    | 77  |
| Speed control of a self-controlled synchronous motor<br>based on a polynomial law<br>H.M. Mohamed, A. Sévigny, K. Al-Haddad, V. Rajagopalan and G. Joos    | 85  |
| A self-organized model reference controller for indirect field<br>orientation of an induction machine<br>R.J. Kerkman, T.M. Rowan, and D. Leggate          | 89  |
| Graphical analysis and modelling of the asynchronous<br>machine in resonant operation<br>P.G. Casielles, L. Zarauza, and J. Sanz                           | 99  |
| <b>II-ELECTRICAL DRIVES: DESIGN AND CONTROL</b>                                                                                                            |     |
| Selection and simulation of DC drives for motion control<br>applications<br>R.E. Colyer and B.L. Jones                                                     | 107 |
| A robust tracking speed control of a permanent magnet<br>synchronous motor<br>A. Dente, M.S. Garrido, and J.H. Maia                                        | 113 |
| Modelling of synchronous machines with discontinuous<br>currents<br>H. Mahmoudi, J. Robert, and F. Spronck                                                 | 117 |
| Modelling and simulation of PWM inverter-fed variable<br>speed motor drive<br>H. Burzanowska and P. Pohjalainen                                            | 123 |
| Stability analysis of an induction motor driven by a PWM<br>converter<br>M. Deloizy and C. Goeldel                                                         | 129 |
| Modelling of inverter-fed induction motors by FFT processing<br>of voltage and current signals<br>A. Dell'Aquila and L. Salvatore                          | 135 |

|                                                                                                                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Study and comparison of two different methods of current control of a permanent magnet synchronous motor<br>T. Rekioua, F. Meibody Tabar, J.P. Caron, and R. Le Doeuff                                 | 145 |
| Control of saturated induction motors by the input-output linearization method<br>G. Campion, M.S. Garrido, and A.J. Pires                                                                             | 153 |
| A representative pattern with a view to the synthesis of the control strategies. Its applications to the frequency changer-brushless DC motor set<br>P. Marseille and J.P. Hautier                     | 159 |
| Application of feedback linearization to the speed regulation of a permanent magnet synchronous motor<br>G. Campion and J.A. Dente                                                                     | 167 |
| Mathematical modelling and simulation of a vector controlled induction motor drive system<br>A. Kelemen, M. Imecs, R. Marschalko, and T. Pana                                                          | 173 |
| Comparative study of continuous and sampled control performances in asynchronous drives<br>S. Siala, B. de Fornel, M. Pietrzak-David                                                                   | 179 |
| Application of a decoupling controller and non-linear methods for the control of self-controlled synchronous motors<br>B. Le Pioufle, G. Georgiou, J.P. Louis, and C. Bergmann                         | 185 |
| Mathematical models for the digital speed control with different sampling period in the inner loop<br>J.L. Herrada, C. Bergmann                                                                        | 191 |
| A low cost digital field oriented control system for an induction actuator<br>J. Dente, R. Faria, F. Labrique, and B. Robyns                                                                           | 197 |
| Digital field oriented control of a P.M. synchronous actuator using a simplified strategy for controlling the Park components of the stator currents<br>H. Buyse, F. Labrique, B. Robyns, and P. Sente | 203 |
| Vector representation in modelling and synthesis of PWM techniques for several three-phase converter structures<br>J.C.P. Palma and J.J.E. Santana                                                     | 209 |
| <b>III-POWER ELECTRONICS AND SIMULATION SOFTWARES</b>                                                                                                                                                  |     |
| Development of a simulation environment of power electronics systems<br>S. Haddad, M.F. Benkhoris, V. Ramaromisa, F. Simonot, and R. Le Doeuff                                                         | 217 |

|                                                                                                                                                              |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| User-friendly input/output software for computer-aided analysis<br>of power electronic systems<br>R. Catteau, A. Chandrasekaran, and V. Rajagopalan          | 229 |
| IGBT: A well suited switch for resonant converters<br>A. Jaafari, A. Sandali, D. Bergogne, and B. Davat                                                      | 235 |
| Periodically switched networks: a general state-space<br>model for PWM bang-bang and resonant converters<br>L. Pinola, V. Varoli                             | 237 |
| Analysis method for complex converters. Application<br>to frequency changers<br>J.P. Hautier, P. Massemin, C. Roekens                                        | 245 |
| Discrete modeling of asymmetric controlled AC-DC<br>converters<br>M. Grötzbach                                                                               | 253 |
| <b>IV-SPECIAL PROBLEMS</b>                                                                                                                                   |     |
| Numerical analysis of thermal phenomena in a thyristor<br>A. Skorek, J.-L. Dion, T.A. Meynard, V. Rajagopalan                                                | 261 |
| Thermal simulation of a stepper motor<br>M. Karmous, A. Berthon, J.M. Kauffmann                                                                              | 267 |
| Behavioural model of iron losses<br>J.J. Rousseau, B. Lefebvre, J.P. Masson                                                                                  | 273 |
| When to use the equivalent circuit instead of a transient<br>induction machine model<br>T. Thiringer                                                         | 279 |
| On the effect of ground grids on short-circuit forces in<br>high voltage stations: A Maxwell stress tensor approach<br>X.-D. Do and R.J. Marceau             | 285 |
| Numerical simulation of a PWM rectifier-inverter<br>induction motor drive<br>P. Nonnon, D. Escallier, S. Saadate, R. Le Doeuff                               | 291 |
| Pseudo-periodic ferroresonant solutions stability in<br>power networks. Application of bifurcation theory<br>and Lyapunov exponents<br>L. Quivy and C. Kieny | 297 |
| Real-time digital and hardware-in-the-loop simulation<br>of a HVDC link<br>O. Rathjen                                                                        | 305 |
| Author index                                                                                                                                                 | 311 |
