

Contents

- viii **Acknowledgements**
ix **Preface**

SECTION 1: FABRICATION

- 3–18 Case study—total quality in action
M H Bird, invited speaker
- 19–26 Computer advances in tool design and manufacture
E B Lambourne, invited speaker
- 27–36 The structural assembly of sheet metal
W A Lees
- 37–46 Creating a world class fabricating environment
T White
- 47–56 Recent developments in joining autobody panels
F Delaney
- 57–62 A brief history of timers: resistance welding controls past and present
N Holden
- 63–72 The effect of post weld heat treatment in weld repaired components of AISI 410 materials
A G Olabi and M S J Hashmi
- 73–84 Robotic plasma spot welding in autobody production at Jaguar cars
R P Walduck, R V Hughes and N A Willetts
- 85–98 “You can’t spot-weld aluminium—can you?”
The truth: resistance spot-welding of aluminium alloys
K A Osman

SECTION 2: QUALITY MANAGEMENT AND MAINTENANCE

- 101–112 From BS5750 to total quality
B Nagpal and T Kilmartin
- 113–122 The application of effective maintenance systems in a press shop environment
M P Gagg

SECTION 3: PRESS TOOLS

- 125–140 Finite element simulation of cutting performance of CNC punches
U P Singh, W Urquhart and P P Miller
- 141–150 BETS: an expert system for tool condition monitoring in blanking
A S Mardapittas and Y H S Au

- 151-164 Monitoring the formation of pressed components using acoustic emission spectra
M J Bathe, D R H Baggs and B Shirvani

SECTION 4: FORMING

- 167-170 Managing changes in the recession
G A Guy, invited speaker
- 171-180 An investigation of residual stresses in cold-extruded and in cold-drawn rods using neutron diffraction
G F Modlen, P J Webster, X Wang and G Mills
- 181-192 Thin tube mechanical bulging by axial compression of an enclosed rod using the finite element analysis technique
D C Webb, E Shaghoei and K Kormi
- 193-202 Flexible forming of three dimensional sheet metal parts using discrete tooling
D E Hardt, invited speaker, M C Boyce, K B Ousterhout and A Karafillis
- 203-210 A programme of work to improve the incremental forming of smoothly contoured sections in sheet metal using a CNC press brake
A Panayotti
- 211-220 Production of sheet metal components by an automatically planned robot assisted press brake
R J Stamp and C F Earl
- 221-232 Establishing the effects of the blankholding action of drawbeads during the deep drawing of an aerospace alloy
K R Gilmour
- 233-248 Options for texturing steel and aluminium alloy sheet-metal surfaces
B Snaith and H El-Menshawey
- 249-258 Enhanced sheet forming using real-time control of blankholder force
D E Hardt, invited speaker, M C Boyce, R C Fenn and H B Sim

SECTION 5: MANAGEMENT AND LOGISTICS

- 261-270 Controlling press shops using simulation
R Roy, P A McCarthy and S E Meikle
- 271-280 Technology, procurement practices, and structural change in the automotive presswork sector
P E Wells and M B Rawlinson
- 281-290 Computer-aided production management in an increasingly computer-integrated environment
A Hodgson
- 291-300 Factory automation: design and simulation of a manufacturing flexible cell for tubular structures with metal sheet
J M Belda, G Larrosa, D Palmero and S Grau
- 301-312 Promoting good logistics management through the developing stages of CAPM at Grunderling Ltd
R Desai
- 313-322 Education and training—improving application of technology
S Guy
- 323-326 Batch production of low value formed and pierced components
P R Cave

SECTION 6: CONTROL, AUTOMATION AND LASER CUTTING

- 329-338 Elements for high speed machines
W A Bullough, invited speaker
- 339-360 Factory automation—the development of novel communications systems
R Ziarati, invited speaker and A Higginson

- 361-370 On-off and multi-step control of AC induction motors for cut-to-length applications
R Firoozian
- 371-378 The computer-aided optimisation of profiled sheets
P Mehta
- 379-386 A methodology for the development of a CO₂ laser cutting database
G A Thomson, G Simpson, J M Ritchie and I E Ross
- 387-396 Thick section cutting with CO₂ lasers
C A Williams and I E Ross
- 397-406 Automated cell for press shops
B Shirvani, S Burke and A D Hope
- 407-416 The benefits of linked CAE tools for sheet metal operations in a low volume make-to-order company
C E R Wainwright, D K Harrison and R Leonard
- 417-428 Go with the flow! An appraisal of CNC spinning and shear forming techniques
G T Smith
