## TABLE OF CONTENTS

(Introduction and conclusion of each chapter are not listed)

For	Foreword	
I.	Surface energy and surface rheology	
	Relation to foam properties	1
	D. Langevin	
	Definition of surface properties	1
	Surface energy	1
	Surface rheology	5
	Foaming and foam stability	9
	Foaming and dynamic surface tension	9
	Foam stability	10
II.	Foams and emulsions: Their stability and breakdown by solid particles and liquid droplets. The colloid chemistry of a dog's	
	breakfast	21
	R. Aveyard, B.P. Binks, J.H. Clint and P.D.I. Fletcher	21
	Foam and emulsion stability	22
	Particles and droplets at fluid/fluid interfaces	28
	Bridging of liquid films by particles and droplets	34
	Effects of particles and oil drops on foam stability	<b>3</b> 7
	Effects of solid particles on emulsion stability	40
	Summary	42
III.	An introduction to forces and structure in individual foam and	
	emulsion films	45
	Vance Bergeron	
	Disjoining pressure	47
	Disjoining pressure models	52
	Experimental measurements	66
IV.	Structure of foam films containing additional polyelectrolytes	73
	R. von Klitzing, A. Espert, A. Colin and D. Langevin	
	Experimental section	74
	Results	74
	Discussion and conclusions	74

V.	Drainage of foam films	83
	The classical theory	85
	New theory	88
VI.	Foam evolution in two dimensions.	
	A particular limit of domain growth	91
	Cellular structures: The foam as paradigm	94
	Ostwald ripening	99
VII.	Statistical thermodynamics of foam	. 105
	Two-dimensional foams	106
	Structural equations of state (Lewis, Aboav-Weaire and Peshkin)	107
	Disorder control. Lemaître equation of state	111
	Lemaître's law as the virial equation of state for foams	113
	Universality of Lemaître's law	115
	Foaming	117
	Thermodynamics of solid foams	120
VIII.	Polygonal networks resulting from dewetting	. 127
IX.	Two-dimensional magnetic liquid froth	. 137
	Two-dimensional instabilities in magnetic fluids	137
	Formation of a magnetic fluid froth	140
	Topological caracterization	141
	Artificial coarsening: Statistical study	141
	The role of time: Quasi Von Neumann behaviour	144
	Topological correlations	146
	Two-dimensional liquid magnetic froths: A model for studying	
	the topology of two-dimensional cellular structures	147
X.	Cellular structures in metallurgy	. 151
	Grain structure in metals	152
	Plasticity and ductile fracture	161
	Mechanical behaviour of metallic foams	167

XI.	<del>-</del>	ll polymer foams	175	
	N.J. Mills and H.X. Zhu			
	Material responses		176	
	Element mechanics		178	
	Foam microstructures		180	
	Foam structural model	.•	181	
	Young's modulus and Poisson'	s ratio	185	
	Yielding		187	
	Discussion		190	
XII.	Hard cellular materials in the	human body: Properties and		
	productions of foamed polymers for bone replacement			
	Introduction	- Bone properties	193	
	ma o da o mon	- Biomaterials	196	
		- Foams for implantation	197	
	Experimental	- Materials and methods	198	
	Results and discussion	- Morphology	199, 203	
		- Chemistry	201	
		- Mechanical properties	202	
		- Degradation	204	
XIII.	Rheology and glassy dynamic M.E. Cates and P. Sollich Basic rheology The elastic modulus Dissipation in foams Soft glassy rheology	s of foams	207  208  210  218  224	
XIV.	Surfactants and stress condition  Kathleen J. Stebe and Char  Basic equations  Stagnant interfaces  Surfactant effects on strongly delivered to the strength of the strength o	eforming interfaces	237 238 242 244 249	
XV.	and cellular solids Andrew M. Kraynik, Mich William E. Warren	ture and rheology of foams, emulations and rheology of foams, emulations are the control of the	259 and	
	Theoretical approach		260	

D. Weaire, R. Phelan and G. Verbist Introduction: The ideal foam model Laplace law and curvature Thin films Vertices and Plateau borders in the ideal foam model Gas and liquid pressures Inversion and the decoration theorem The hexagonal honeycomb in 2D Simulations The Surface Evolver Application to wet foams  XVII. Rheology and drainage of liquid foams G. Verbist, D. Weaire and R. Phelan Foams: Solid or liquid? Elastic moduli Bulk modulus of a foam Shearing a disordered foam Foam drainage Some solutions and experimental verifications  XVIII. Electrical and thermal transport in foams R. Phelan, G. Verbist and D. Weaire Electrical conductance Calculation of nonlinearities Measuring the conductivity (and hence the liquid fraction) Thermal conductivity  XIX. Decontamination of nuclear components through the use of foams G. Boissonnet, M. Faury and B.
