## INTRODUCTION

<b>1 Modern Heuristic Techniques . . . . .</b>	<b>1</b>
Abstract . . . . .	1
1.1 Introduction . . . . .	1
1.2 Combinatorial Optimization . . . . .	2
1.3 The Case for Heuristics . . . . .	3
1.4 Neighbourhood Search . . . . .	5
1.5 Simulated Annealing . . . . .	6
1.5.1 A Simple Example . . . . .	7
1.5.2 Generic Decisions . . . . .	8
1.5.3 Problem Specific Decisions . . . . .	10
1.5.4 Other Factors . . . . .	10
1.5.5 Summary . . . . .	11
1.6 Tabu Search . . . . .	11
1.6.1 Basic Concepts . . . . .	11
1.6.2 Recency . . . . .	12
1.6.3 Frequency . . . . .	15
1.6.4 Summary . . . . .	17
1.7 Genetic Algorithms . . . . .	17
1.7.1 Crossover . . . . .	18
1.7.2 Mutation . . . . .	18
1.7.3 Reproduction . . . . .	18
1.7.4 A Simple Example . . . . .	19
1.7.5 Modifications and Enhancements . . . . .	21
1.7.6 Summary . . . . .	23
1.8 Conclusion . . . . .	23
REFERENCES . . . . .	24

<b>2</b>	<b>Localized Simulated Annealing in Constraint Satisfaction and Optimization</b> . . . . .	27
	Abstract . . . . .	27
2.1	Introduction . . . . .	27
2.2	Subspaces and Their Evaluation . . . . .	29
2.3	Localized Simulated Annealing (LSA) . . . . .	30
2.4	Analysis and Justification . . . . .	32
2.5	Empirical Results . . . . .	35
	2.5.1 The Flight Scheduling Problem . . . . .	36
	2.5.2 The Freight Train Regrouping Problem . . . . .	38
2.6	Conclusion . . . . .	39
	REFERENCES . . . . .	39
<b>3</b>	<b>Observing Logical Interdependencies in Tabu Search:- Methods and Results</b> . . . . .	41
	Abstract . . . . .	41
3.1	Introduction . . . . .	41
3.2	Tabu Search . . . . .	42
	3.2.1 Historical Development . . . . .	42
	3.2.2 Guiding Process Versus Application Process . . . . .	43
	3.2.3 Tabu Navigation Method - Static Tabu Search . . . . .	45
	3.2.4 Reverse Elimination Method and Cancellation Sequence Method . . . . .	45
	3.2.5 Logical Interdependencies . . . . .	48
	3.2.6 Moving Gap . . . . .	48
3.3	Applications in Location Planning . . . . .	50
	3.3.1 Network Design and Steiner Trees . . . . .	50
	3.3.2 Warehouse Location Problems . . . . .	54
	3.3.3 Further Location Problems . . . . .	55
3.4	Conclusions . . . . .	56
	REFERENCES . . . . .	57
<b>4</b>	<b>Reactive Search: Toward Self-tuning Heuristics</b> . . . . .	61
	Abstract . . . . .	61
4.1	Reactive Search: Feedback Applied to Heuristics . . . . .	61
4.2	Tabu Search: Beyond Local Search . . . . .	63
4.3	Some Forms of Tabu Search . . . . .	64
	4.3.1 Dynamical Systems . . . . .	65
	4.3.2 Implementations . . . . .	66
4.4	Reactive Tabu Search (RTS) . . . . .	68
	4.4.1 Self-adjusted Prohibition Period . . . . .	68
	4.4.2 The Escape Mechanism . . . . .	69
	4.4.3 Fast Algorithms for Using the Search History . . . . .	70
4.5	Different Ways of Escaping from a Local Attractor . . . . .	71
	4.5.1 Strict-TS . . . . .	72
	4.5.2 Fixed-TS . . . . .	74

4.5.3	Reactive-TS . . . . .	75
4.6	Applications of Reactive Search: a Review . . . . .	78
4.6.1	Combinatorial Tasks . . . . .	78
4.6.2	Continuous Optimization . . . . .	79
4.6.3	Sub-symbolic Machine Learning (Neural Networks) . . . . .	79
4.6.4	VLSI Systems with Learning Capabilities . . . . .	79
4.7	Software . . . . .	80
4.8	Acknowledgements . . . . .	81
	REFERENCES . . . . .	81
<b>5</b>	<b>Combinatorial Optimization by Genetic Algorithms: The Value of the Genotype/Phenotype Distinction . . . . .</b>	<b>85</b>
	Abstract . . . . .	85
5.1	Background . . . . .	85
5.2	The Line Balancing Problem . . . . .	86
5.3	An Inadequate Approach . . . . .	88
5.4	A GA Approach . . . . .	89
5.5	How Well Does it Work? . . . . .	94
5.6	Conclusions . . . . .	96
	REFERENCES . . . . .	96
<b>6</b>	<b>Integrating Local Search into Genetic Algorithms . . . . .</b>	<b>99</b>
	Abstract . . . . .	99
6.1	Introduction . . . . .	99
6.2	GAs and NS . . . . .	100
6.3	No-wait Flowshop Problem . . . . .	101
6.4	Graph Partitioning . . . . .	102
6.4.1	The LPK Heuristic . . . . .	103
6.4.2	Complementary Crossover . . . . .	103
6.4.3	1-bit Hamming Hill Climber (HC) . . . . .	104
6.4.4	Mutation (MUT) . . . . .	104
6.5	Evaluation of the Operators . . . . .	105
6.6	Recombination . . . . .	107
6.7	Conclusion . . . . .	113
	REFERENCES . . . . .	113
<b>CASE STUDIES</b>		
<b>7</b>	<b>Local Search for Steiner Trees in Graphs . . . . .</b>	<b>117</b>
	Abstract . . . . .	117
7.1	Introduction . . . . .	117
7.2	Local Search . . . . .	118
7.2.1	The Steiner Tree Problem in Graphs (SP) . . . . .	118
7.3	Neighborhoods for the SP . . . . .	119
7.4	Computational Results . . . . .	126

<b>8 Local Search Strategies for the Vehicle Fleet Mix Problem . . . .</b>	<b>131</b>
Abstract . . . . .	131
8.1 Introduction . . . . .	131
8.2 The Vehicle Fleet Mix (VFM) Problem . . . . .	133
8.2.1 Representation of the VFM . . . . .	133
8.2.2 Literature Review of the VFM . . . . .	134
8.3 Modified RPERT Procedure (MRPERT) . . . . .	135
8.4 Tabu Search . . . . .	137
8.5 Computational Experience . . . . .	144
8.6 Conclusion and Future Directions . . . . .	151
8.7 Acknowledgement . . . . .	151
REFERENCES . . . . .	152
<b>9 SA Solutions for Timetabling . . . . .</b>	<b>155</b>
Abstract . . . . .	155
9.1 Introduction . . . . .	155
9.2 Local Search, Simulated Annealing and Scheduling Problems . . . . .	156
9.3 Examination Scheduling . . . . .	158
9.4 Laboratory Scheduling . . . . .	162
9.5 Conclusions . . . . .	165
REFERENCES . . . . .	166
<b>10 A Tabu Search Algorithm for Some Discrete-Continuous Scheduling Problems . . . . .</b>	<b>167</b>
Abstract . . . . .	167
10.1 Introduction . . . . .	167
10.2 Problem Formulation . . . . .	168
10.3 An Application of the Tabu Search Algorithm . . . . .	172
10.3.1 Representation of a Feasible Solution . . . . .	172
10.3.2 Creating a Starting Solution . . . . .	172
10.3.3 Objective Function . . . . .	173
10.3.4 Mechanism of Generating a Neighbourhood . . . . .	173
10.3.5 Structure of the Tabu List . . . . .	174
10.4 Computational Experiments . . . . .	176
10.5 Final Remarks . . . . .	179
10.6 Acknowledgements . . . . .	179
REFERENCES . . . . .	179
<b>11 The Analysis of Waste Flow Data from Multi-Unit Industrial Complexes Using Genetic Algorithms . . . . .</b>	<b>181</b>
Abstract . . . . .	181
11.1 Introduction . . . . .	181
11.2 Applicability of the Genetic Algorithm . . . . .	182
11.3 The Flow of Industrial Waste Within Large Complexes . . . . .	183
11.4 The Algorithm . . . . .	187
11.4.1 String Encoding . . . . .	187
11.4.2 The Fitness Function . . . . .	189

11.4.3 Crossover Operator . . . . .	190
11.4.4 Mutation Operator . . . . .	191
11.5 Results . . . . .	192
11.5.1 Input Data Generation . . . . .	192
11.5.2 Results for a Four Factory System . . . . .	192
11.6 Applications of the Algorithm . . . . .	194
11.7 Acknowledgements . . . . .	195
REFERENCES . . . . .	195
<b>12 The Evolution of Solid Object Designs Using Genetic Algorithms</b>	<b>197</b>
Abstract . . . . .	197
12.1 Introduction . . . . .	197
12.2 Representation . . . . .	198
12.3 Correcting Illegal Designs . . . . .	198
12.3.1 Method 1 . . . . .	198
12.3.2 Method 2 . . . . .	200
12.3.3 Method 3 . . . . .	201
12.3.4 Where to Correct the Designs . . . . .	202
12.4 The Evolution of a Table . . . . .	203
12.4.1 Size . . . . .	203
12.4.2 Mass . . . . .	204
12.4.3 Stability . . . . .	205
12.4.4 Flat Surface . . . . .	207
12.4.5 Supportiveness and Stability . . . . .	208
12.4.6 What the Tables are Not . . . . .	210
12.5 Conclusions . . . . .	210
REFERENCES . . . . .	211
<b>13 The Convoy Movement Problem With Initial Delays</b>	<b>213</b>
Abstract . . . . .	213
13.1 Introduction . . . . .	213
13.2 A Branch-and-Bound Approach . . . . .	216
13.3 A Hybrid Approach : Using GAs for Delays and B&B for Paths . . . . .	221
13.4 A Pure GA Approach . . . . .	227
13.5 Conclusions . . . . .	230
REFERENCES . . . . .	232
<b>14 A Comparison of Heuristics for Telecommunications Traffic Routing</b>	<b>235</b>
Abstract . . . . .	235
14.1 Introduction . . . . .	235
14.2 Background . . . . .	236
14.2.1 The Genetic Algorithm . . . . .	236
14.2.2 Simulated Annealing . . . . .	238
14.3 Problem Specification . . . . .	241
14.4 Results . . . . .	244
14.5 Current and Future Work . . . . .	251
14.6 Conclusions . . . . .	252

14.7 Acknowledgements . . . . .	253
