## Contents

| Preface   |   | ix |
|-----------|---|----|
| Chapter 1 | A CALCULATING RISK                      | 3  |
|           | Inventing the First Microprocessors     |    |
|           | Busicom and Intel                       | 3  |
|           | Hoff Makes his Case                     | 7  |
|           | Faggin Ascendent                        | 9  |
|           | The 4000 Family                         | 10 |
|           | Finding a Market                        | 15 |
|           | The 8080                                | 18 |
|           | Giving Credit                           | 19 |
| Chapter 2 | A REVOLUTION IN MINIATURE               | 23 |
|           | The Importance of the Microprocessor    |    |
|           | The Pervasiveness of the Microprocessor | 28 |
| Chapter 3 | FIRE, WATER, EARTH AND AIR              | 37 |
|           | Fabricating the Microprocessor          |    |
|           | Crystals                                | 38 |
|           | The Blueprint of a Revolution           | 42 |
|           | The Swinging Gate                       | 47 |
|           | Going Flat                              | 56 |
|           | A World Apart                           | 59 |
|           | Layers of Meaning                       | 61 |
|           | Sbedding Light                          | 69 |
|           | Picking the Winners                     | 74 |
|           | Legging it Out                          | 77 |
|           | Final Exam                              | 81 |

| Chapter 4 | THE CITIES OF THE PLANAR     | 87  |
|-----------|------------------------------|-----|
|           | How the Microprocessor Works |     |
|           | Touring the Silicon City     | 92  |
|           | The Silicon Metronome        | 99  |
|           | Counting Bits                | 100 |
|           | Exchanging Notes             | 104 |
|           | Simple Minds                 | 105 |
|           | Making Sense                 | 111 |
|           | Taking Control               | 113 |
|           | Getting Help                 | 116 |
|           | Going Green                  | 117 |
|           | Relating to a Noisy World    | 120 |
|           | A Story of People            | 121 |
| Chapter 5 | HISTORY I: BEGINNINGS        | 125 |
|           | The First Decade             |     |
|           | Making the Cut               | 138 |
| Chapter 6 | HISTORY II: THE PC ERA       | 165 |
|           | The Second Decade            |     |
|           | Abiding by the Law           | 168 |
|           | Off the Beaten Path          | 183 |
|           | An Unexpected Threat         | 186 |
|           | Spinning out Threads         | 195 |
| Chapter 7 | HISTORY III: BREAK-OUT       | 203 |
|           | The Third Decade             |     |
|           | A Forgotten Player Returns   | 206 |
|           | A Peripheral Revolution      | 208 |
|           | Blue Chips                   | 212 |
|           | Courting the Microprocessor  | 215 |
|           | An Inside Game               | 229 |
|           | Taking Stock                 | 231 |
|           | A Bitter Bug                 | 236 |

|           | Order in the Court                     | 243 |
|-----------|--|-----|
|           | Towards the Millenium                  | 245 |
| Chapter 8 | THE FUTURE: DREAMS OF LIGHT            | 251 |
|           | The Microprocessor in the 21st Century |     |
|           | Substrate                              | 254 |
|           | Other Substrates                       | 256 |
|           | Production                             | 259 |
|           | Software                               | 262 |
|           | The Burden of the Past                 | 265 |
|           | Green Thoughts                         | 267 |
|           | Architecture                           | 269 |
|           | Organization                           | 276 |
|           | Beyond Semiconductors                  | 280 |
| Footnotes | •                                      | 289 |
| Glossary  |  | 301 |
| Index     |  | 319 |
