

# CONTENTS

Dedication	xi
Preface	xiii
Acknowledgement	xvi
INTRODUCTION	
<b>Modelling Research for Concrete Engineering</b> by G.M. Idorn	3
<b>Modelling and Materials Science of Cement-Based Materials</b> <b>Part I: An Overview</b> by H.M. Jennings, J. Hsieh, R. Srinivasan, S. Jaiswal, M. Garci, D. Sohn, C. Hinnners, S. Heppner, and C.M. Neubauer	29
PART I: MODELLING PORE STRUCTURE	
<i>Scale and Resolution of Models</i>	
<b>At What Scale Do Homogeneous Phenomena Become Localized: The Necessary and Sufficient Magnification</b> by V. Johansen and N. Thaulow	65
<b>Models for Prediction of Microstructural Development in Cement-Based Materials</b> by K. Van Breugel	91
<b>Multiscale Models: A Tool to Describe the Porosity of Cement-Based Materials and to Predict Their Transport Properties</b> by J.F. Daian, Ke Xu, and D. Quenard	107
<b>A Scaling Model of the Microstructural Evolution in C<sub>3</sub>S/C-S-H Pastes</b> by R. Maggion, S. Bonnamy, P. Levitz and H. Van Damme	137
<b>Effect of Mineralogy of Fillers on the Cement Hydration</b> by B. Lagerblad and K.O. Kjellsen	157

*Spatial Distributions*

<b>Application of Digital-Image-Based Models to Microstructure, Transport Properties, and Degradation of Cement-Based Materials</b> by D.P. Bentz, E.J. Garboczi, and N.S. Martys	167
<b>Modelling and Materials Science of Cement-Based Materials Part II: Recent Developments</b> by H.M. Jennings, Y. Xi, Z.P. Bazant, M. Yang, and C.M. Neubauer	187
<b>Simulation of Effects of Small Inert Grains on Cement Hydration and Its Contact Surfaces</b> by P. Navi and C. Pignat	227
<b>Texture and Moisture Characterization of Hardened Cement Pastes and Concretes from Water Vapour Sorption Measurements</b> by V. Baroghel-Bouny and T. Chaussadent	241
<b>Influence of Silica Fume on the Pore Structure of Mortar When Measured by Water Vapour Sorption Isotherms</b> by E. Helsing Atlassi	257
<i>Databases and Expert Systems</i>	
<b>Expert Systems and Database Systems</b> by H.W. Reinhardt and G.B. Funk	271
PART II: TRANSPORT MECHANISMS AND DURABILITY	
<i>Transport Mechanisms</i>	
<b>Transport Mechanisms in Porous Materials—An Introduction to Their Basic Laws and Correlations</b> by L.-O. Nilsson and L. Tang	289
<b>Relationships Between Transport Properties and Compressive Strength of Concrete</b> by J.P. Ollivier, M. Massat and M.P. Yssorche	313

<b>Effects of Curing on the Gas Permeability of Cover Concrete</b> by H.W. Reinhardt and Abebe Dinku	325
<b>Effect of Ageing on Pore Structure and Permeability of Cementitious Materials</b> by P. Distler and J. Kropp	339
<b>Permeability and Sorptivity Response of Concretes to Variations in Early-Age Curing—Implications for Durability Specifications</b> by Y. Ballim	351
<b>Correlation Between the Transport Properties of the Transition Zone and Its Mineral Composition and Microstructure</b> by D. Breton and G. Ballivy	361
<b>Modified Microstructure via Chemical Activation of Ferrite and Aluminate Phases in Portland Cement-Based Formulations—Repartition of Crystalline and Noncrystalline Phases vs. Cementitious Properties</b> by W. Schwarz	373
<i>Major Parameters Affecting Transport Mechanisms</i>	
<b>Influence of Environmental Parameters Upon Permeation in Concrete</b> by L. Parrott	399
<b>Neural Networks for Predicting the Deterioration of Concrete Structures</b> by N.R. Buenfeld and N.M. Hassanein	415
<b>Effect of Moisture Content on the Porosity and Transport Parameters of Concrete</b> by F. Ehrenberg, F.S. Rostásy, and U. Diederichs	433
<b>Effect of Moisture in Concrete on Fluid Absorption</b> by M. Sosoro and H.W. Reinhardt	443

*Corrosion Mechanisms and Parameters*

<b>Corrosion Mechanisms of Concrete and Their Relevant Transport Processes</b> by J. Kropp	457
<b>Durability Design Based on Models for Corrosion Rates</b> by C. Andrade and C. Alonso	473
<b>Prediction of Service Life of New and Existing Concrete Structures— On the Need for Models and Materials Parameters</b> by M.R. Geiker and S. Rostam	493
<b>Predicting the Service Life of Concrete Exposed to Frost Action Through a Modelling of the Water Absorption Process in the Air-Pore System</b> by G. Fagerlund	503
<b>A Numerical Method for Prediction of Chloride Penetration Into Concrete Structures</b> by L. Tang and L.-O. Nilsson	539
<b>Decreasing the Penetration of Organic Liquids Into Concrete by Using Active Additions</b> by H. Grube	553
<b>INDEX</b>	557
