## **Preface**

## **Acknowledgements**

## **List of Participants**

### **SESSION ONE**

#### CLASSICAL APPROACHES OF A GENERAL DESIGN THEORY

Axiomatic Design as a Basis for Universal Design Theory <i>N. P. Suh</i>	3
General Design Theory and its Extensions and Applications <i>T. Tomiyama</i>	25
Towards a Model of Designing Which Includes its Situatedness <i>J. Gero</i>	47
The Role of Artefact Theories in Design <i>M. M. Andreassen</i>	57
Toward a Better Understanding of Engineering Design Models <i>Y. Jin, S. Lu</i>	73

### **SESSION TWO**

#### DESIGN THEORIES IN SPECIAL AREAS OF ENGINEERING AND NATURAL SCIENCES

Systematic Software Construction <i>G. Goos, U. Aßmann</i>	91
Efficient Design Methods in Microelectronic/Mechatronic Systems <i>M. Glesner, J. Becker</i>	105
Microsystems Technology - A New Challenge for the Mechanical Engineer <i>W. Menz</i>	135
Metallic Structural Materials: Design of Microstructure <i>D. Löhe, Vöhringer, O.</i>	147
Ceramics from Elementorganic Compounds <i>F. Aldinger</i>	169
From Simple Building Blocks to Complex Target Molecules and Multifarious Reactions <i>H. Hopf</i>	185
Designing Molecules <i>R. Herges</i>	197
