

The 1998 New Security Paradigms Workshop

Greetings, Prefatory Notes & Acknowledgements: *Words from the NSPW Chairs*vi

Session I: The Software Life Cycle

Toward A Secure System Engineering Methodology.....2
Chris Salter, O. Sami Saydjari, Bruce Schneier, Jim Wallner
Securing Engineering in an Evolutionary Acquisition Environment.....11
Marshall D. Abrams

Session II: Protection

An Integrated Framework for Security and Dependability22
Erland Jonsson
MetaObjects for Access Control: A Formal Model for Role-Based Principals.....30
Thomas Riechmann, Franz J. Hauckr

Session III: Integrity

Evaluating System Integrity40
Simon J. Foley
Position Paper: Prolepsis on the Problem of Trojan-Horse-Based Integrity Attacks48
John McDermott

Session IV: Assurance

Death, Taxes and Imperfect Software: Surviving the Inevitable54
Crispin Cowan and Calton Pu
A Graph-Based System for Network-Vulnerability Analysis71
Cynthia Phillips, Laur Painton Swiler

Session V: Tuff Stuff: Part I

Parsimonious Downgrading and Decision Trees Applied to the Inference Problem.....82
LiWu Chang, Ira S. Moskowitz

Tuff Stuff: Part II

Server-Assisted Cryptography92
Donald Beaver
Discussion Topic: What is the Old Security Paradigm.....107
Steven J. Greenwald

Session VI: Discussion

Session VII: Availability

Tolerating Penetrations and Insider Attacks by Requiring Independent Corroboration 122
Clifford Kahn

A New Model for Availability in the Face of Self-Propagating Attacks134
Meng-Jang Lin, Aleta M. Ricciardi
