Preface	5
I. Philosophical motivation	
§1 Introductory note	9
§2 Standard logics - a natural deduction frame for first order predicate logics	13
§3 Standard logics and their tolerance of irrelevance	23
§4 The idea of relevant logic and some applications	34
§5 Are relevant logics non-starters?	37
§6 Philosophical pseudo-problems caused by irrelevance, or: why relevant logics are superior	49
§7 Historical predecessors: minimal logic and strict implication	70
§8 The search for a formal account of relevance	81
§9 Worlds semantics for relevant logics?	92
II. Technical execution	
§10 Rules semantics for (first order) logical validity	99
§11 The natural deduction frame $N(\text{base})$ and the logic $R\gamma$	123
§12 The relevant conditional (and biconditional) - $R\gamma \rightarrow \theta$...	135
§13 Negation - $R\gamma \rightarrow \theta \rightarrow \sim$	142
§14 Conjunction - $R\gamma \rightarrow \theta \rightarrow \sim \wedge$	163
§15 Disjunction - $R1$	169
§16 Conposition - $R2$	178
§17 Conjunction and conposition combined - $R3$	186
§18 Deviant disjunctions I: intensional disjunction	194
§19 Deviant disjunctions II: TND without DNA	204
§20 The case of Distribution - $R4$	212
§21 Quantifiers - $R3$, $R4$	229
§22 Higher order predicates - $R3\omega$, $R4\omega$	245
§23 Identity, definite descriptions, abstraction - $R3\omega =$, $R4\omega =$	264
§24 Higher order implication	311
§25 Relevant modalities	334
§26 Consistency and decidability	351

III. Epilogue

§27 Is relevance enough? A short discussion of other projects in contemporary logic 395

Appendix A: Grammar 451

Appendix B: Systems 471
