Preface	v
List of Workfiles	vi
Chapter 1 Introduction to EViews	1
1.1 Creating a Workfile	1
1.2 Importing a Text (ASCII) Data File	2
1.3 Importing Data Contained in an Excel File	6
1.4 Entering Data Manually	8
1.5 EViews Help Menu	10
1.6 Examining the Data	12
1.7 Plotting the Data	13
1.7.1 Plotting from the Spreadsheet View	13
1.7.2 Plotting using Quick/Graph	14
1.7.3 Copying Graphs into Documents	16
1.8 Descriptive Statistics	18
1.9 Histograms	19
1.10 Creating and Deleting Variables	20
1.11 The Basic Mathematical Operations	21
1.12 Using EViews Functions	21
1.13 Creating Coefficient Vectors	22
Chapter 2 Computing Normal Probabilities	24
2.1 Cumulative Normal Probabilities	24
2.2 Computing Normal Distribution Percentiles	27
Chapter 3 The Simple Linear Regression Model: Specification and Estimation	30
3.1 Plotting the Food Expenditure Data	30
3.2 Estimating a Simple Regression	34
3.3 Plotting a Simple Regression	36
3.4 Plotting the Least Squares Residuals	38
3.5 Using EViews to Predict with a Simple Regression Model	39
Chapter 4 Properties of the Least Squares Estimators	43
4.1 The Estimated Variances and Covariances for the Food Expenditure Example	43
4.2 Storing Results	44
4.3 Working with Regression Statistics	46
4.4 Plots of the Least Squares Residuals	47
Chapter 5 Inference in the Simple Regression Model	49
5.1 Interval Estimation Using the Food Expenditure Data	49
5.2 A Two-Tailed Hypothesis Test	51
5.3 A Significance Test in the Food Expenditure Model	52
5.4 One-Tailed Tests in the Food Expenditure Model	53
5.4.1 Alternative Greater Than ($>$)	53
5.4.2 Alternative Less Than ($<$)	54
5.4.3 One-Tailed Test of Significance	54
5.5 Prediction in the Food Expenditure Model	55
5.5.1 Constructing the Interval	55

5.5.2	Predicting Using EViews	56
Chapter 6	The Simple Linear Regression Model: Reporting the Results and Choosing the Functional Form	60
6.1	The Coefficient of Determination	60
6.2	The Effects of Scaling the Data	62
6.3	Choosing a Functional Form: Empirical Issues	64
6.4	Are the Residuals Normally Distributed?	70
Chapter 7	The Multiple Regression Model	72
7.1	Least Squares Estimation of a Multiple Regression Model	72
7.2	Simple Prediction	73
7.3	Estimation of the Error Variance	74
7.4	The Variances and Covariances of the Least Squares Estimators	75
7.5	Interval Estimation	76
7.6	Hypothesis Testing for a Single Coefficient	77
7.6.1	Using the Program TTEST	77
7.6.2	Computing the Tests Directly	82
7.7	Measuring Goodness of Fit	83
7.7.1	Using the ANOVA Program	83
7.7.2	Directly Computing the Goodness of Fit Measures	85
Chapter 8	Further Inference in the Multiple Regression Model	86
8.1	The F-test	86
8.1.1	Constructing the F-Statistic	86
8.1.2	Using EViews Coefficient Tests	88
8.2	Testing the Significance of the Model	90
8.3	An Extended Model	91
8.4	The Significance of Advertising	92
8.5	The Optimal Level of Advertising	93
8.6	The Optimal Level of Advertising and Price	94
8.7	The Use of Nonsample Information	96
Chapter 9	Dummy (Binary) Variables	98
9.1	The University Effect on House Prices	98
9.2	An Empirical Example of the Chow Test	99
9.2.1	Creating Time Trend Variables	100
9.2.2	Using “Logical” Operations	101
9.2.3	Estimating and Testing the Unrestricted Model	102
9.2.4	Estimating a Model Using Part of the Sample	105
9.2.5	Using the EViews Chow Test	105
Chapter 10	Nonlinear Models	107
10.1	Interactions Between Two Continuous Variables	107
10.2	A Simple Nonlinear-in-the-Parameters Model	108
10.3	A Logistic Growth Curve	109
10.4	Poisson Regression	110
Chapter 11	Heteroskedasticity	113
11.1	Diagnosing Heteroskedasticity	113
11.2	White's Approximate Estimator for the Variance of the LS Estimator	114

11.3 Proportional Heteroskedasticity	116
11.4 The Goldfeld-Quandt Test	118
11.5 A Sample with a Heteroskedastic Partition	119
11.6 Testing the Variance Assumption	121
Chapter 12 Autocorrelation	123
12.1 Residual Plots	123
12.2 Implementing Generalized Least Squares	125
12.3 Using EViews for Estimation with AR(1) Errors	127
12.4 The Durbin-Watson Test for Autocorrelation	128
12.5 A Lagrange Multiplier Test for Autocorrelation	129
12.6 Prediction with AR(1) Errors	131
12.7 Using EViews for Prediction with AR(1) Errors	132
Chapter 13 Random Regressors and Moment Based Estimation	135
13.1 The Inconsistency of the Least Squares Estimator When $\text{cov}(x,e) \neq 0$	135
13.2 An Example of the Consequences of Measurement Errors	136
13.3 An Empirical Example of Instrumental Variables Estimation	137
13.4 An Empirical Example of the Hausman Test	139
Chapter 14 Simultaneous Equations Models	140
14.1 Estimating the Reduced Form	140
14.2 Two-Stage Least Squares Estimation of an Equation	141
14.3 Two-Stage Least Squares Estimation of a System of Equations	142
Chapter 15 Distributed Lag Models	146
15.1 The Finite Lag Model	146
15.2 Polynomial Distributed Lags	148
15.3 Selection of the Length of the Finite Lag	149
15.4 An Illustration of the ARDL Model	149
Chapter 16 Regression with Time Series Data	152
16.1 Stationary Time Series	152
16.2 Spurious Regressions	153
16.3 Checking Stationarity Using the Autocorrelation Function	154
16.4 The Dickey-Fuller Tests: An Example	156
16.5 An Example of a Cointegration Test	160
Chapter 17 Pooling Time-Series and Cross-Sectional Data	162
17.1 Estimating Separate Equations	162
17.2 Separate or Joint Estimation	163
17.3 A Dummy Variable Specification	166
17.4 An Error Components Model	168
Chapter 18 Qualitative and Limited Dependent Variable Models	171
18.1 An Example	171
Chapter 19 Obtaining Economic Data from the Internet	173
19.1 Obtaining Data from Economagic	173
19.2 Obtaining Data in Text Format	177
