Preface	xi
1 The standard model of cosmology	1
1.1 Introduction	1
1.2 The Robertson–Walker metric	2
1.3 Einstein equations for a Friedmann–Robertson–Walker universe	5
1.4 Scale factor dependence of the energy density	7
1.5 Time dependence of the scale factor	8
1.6 Age of the universe	8
1.7 The cosmological constant	10
1.8 Equilibrium thermodynamics in the expanding universe	17
1.9 Transition from radiation to matter domination	19
1.10 Cosmic microwave background radiation (CMBR)	21
1.11 Big-bang nucleosynthesis	21
1.12 Exercises	27
1.13 General references	27
Bibliography	28
2 Phase transitions in the early universe	29
2.1 Introduction	29
2.2 Partition functions	30
2.3 The effective potential at finite temperature	33
2.4 Phase transitions in the Higgs model	36
2.4.1 $e^4 \ll \lambda$	37
2.4.2 $e^4 \gg \lambda$	40
2.5 Phase transitions in electroweak theory	45
2.6 Phase transitions in grand unified theories	48
2.7 Phase transitions in supersymmetric GUTs	51
2.8 Phase transitions in supergravity theories	55
2.9 Nucleation of true vacuum	59
2.10 Exercises	63
2.11 General references	63
Bibliography	63

3	Topological defects	65
3.1	Introduction	65
3.2	Domain walls	66
3.3	Global cosmic strings	69
3.4	Local cosmic strings	71
3.5	Gravitational fields of local cosmic strings	74
3.5.1	Double images	75
3.5.2	Temperature discontinuities	76
3.5.3	Cosmic string wakes	76
3.6	Dynamics of local cosmic strings	76
3.7	Magnetic monopoles	80
3.8	Monopole topological quantum number	83
3.9	Magnetic monopoles in grand unified theories	85
3.10	Abundance of magnetic monopoles	86
3.11	Exercises	89
3.12	General references	89
	Bibliography	89
4	Baryogenesis	91
4.1	Introduction	91
4.2	Conditions for baryogenesis	94
4.3	Out-of-equilibrium decay of heavy particles	96
4.4	Baryogenesis in GUTs	99
4.5	Baryogenesis in $SO(10)$ GUTs	110
4.6	Status of GUT baryogenesis	113
4.7	Baryon-number non-conservation in the Standard Model	114
4.8	Sphaleron-induced baryogenesis	120
4.9	CP-violation in electroweak theory	127
4.10	Phase transitions and electroweak baryogenesis	129
4.11	Supersymmetric electroweak baryogenesis	132
4.12	Affleck–Dine baryogenesis	137
4.13	Exercises	142
4.14	General references	143
	Bibliography	143
5	Relic neutrinos and axions	147
5.1	Introduction	147
5.2	Relic neutrinos	150
5.3	Axions	151
5.3.1	Introduction: the strong CP problem and the axion solution	151
5.3.2	Visible and invisible axion models	156
5.3.3	Astrophysical constraints on axions	159
5.3.4	Axions and cosmology	161
5.4	Exercises	169
5.5	General references	169

Bibliography	170
6 Supersymmetric dark matter	172
6.1 Introduction	172
6.2 Weakly interacting massive particles or WIMPs	175
6.3 The gravitino problem	177
6.4 Minimal supersymmetric standard model (MSSM)	179
6.5 Neutralino dark matter	181
6.6 Detection of dark matter	187
6.6.1 Neutralino–nucleon elastic scattering	188
6.6.2 WIMP annihilation in the sun or earth	189
6.6.3 WIMP annihilation in the halo	192
6.7 Exercises	192
6.8 General references	193
Bibliography	193
7 Inflationary cosmology	195
7.1 Introduction	195
7.2 Horizon, flatness and unwanted relics problems	195
7.2.1 The horizon problem	195
7.2.2 The flatness problem	197
7.2.3 The unwanted relics problem	198
7.3 Old inflation	199
7.4 New inflation	201
7.5 Reheating after inflation	206
7.6 Inflaton field equations	208
7.7 Density perturbations	210
7.8 A worked example	214
7.9 Complex inflaton field	216
7.10 Chaotic inflation	217
7.11 Hybrid inflation	220
7.12 The spectral index	221
7.13 Exercises	224
7.14 General references	224
Bibliography	224
8 Inflation in supergravity	226
8.1 Introduction	226
8.2 Models of supergravity inflation	227
8.3 D -term supergravity inflation	232
8.4 Hybrid inflation in supergravity	234
8.5 Thermal production of gravitinos by reheating	237
8.6 The Polonyi problem	238
8.6.1 Inflaton decays before Polonyi field oscillation	240
8.6.2 Inflaton decays after Polonyi field oscillation	244

8.7	Exercises	248
8.8	General references	248
	Bibliography	248
9	Superstring cosmology	249
9.1	Introduction	249
9.2	Dilaton and moduli cosmology	250
9.3	Stabilization of the dilaton	255
9.4	Dilaton or moduli as possible inflatons	259
9.5	Ten-dimensional string cosmology	260
9.6	D-brane inflation	265
9.7	Pre-big-bang cosmology	269
9.8	M-theory cosmology—the ekpyrotic universe	272
9.9	Exercises	273
9.10	General references	273
10	Black holes in string theory	275
10.1	Introduction	275
10.2	Black-hole event horizons	276
10.3	Entropy of black holes	281
10.4	Perturbative microstates in string theory	289
10.5	Extreme black holes	291
10.6	Type II supergravity	293
10.7	Form fields and D-branes	296
10.8	Black holes in string theory	298
10.9	Counting the microstates	303
10.10	Problems	305
10.11	General references	307
	Bibliography	307
	Index	309
