Preface	ix
Part 1. Overview	1
Lecture 1	3
Geometric manifolds	3
Thurston manifolds	4
The theorems	5
Lecture 2	7
Basics of Riemannian geometry	7
Basics of Ricci flow	8
Canonical Neighborhoods	10
Lecture 3	13
More on Canonical Neighborhoods	13
Surgery on Ricci flow	14
Topological effects of surgery	16
Lecture 4	17
More structure (geometric and analytic) of Canonical Neighborhoods	17
Finite-time extinction	18
Lecture 5	21
Geometric limits	21
Hyperbolic limits	22
The thin part	23
Alexandrov spaces	23
Summary of Part 1	25
Part 2. Non-collapsing Results for Ricci Flows	27
Lecture 6	29
Geometric limits in the context of Ricci flow	29
Sketch of proof of the convergence theorem	31
Lecture 7	33
Non-collapsing: the statement	33
The \mathcal{L} -function and \mathcal{L} -geodesics	34
Lecture 8	37

The \mathcal{L} -exponential map	37
Jacobi fields and the differential of \mathcal{L} -exp	38
Lecture 9	41
Harnack's inequality	41
Relation of $H(X)$ to \mathcal{L} -geodesics	42
Lecture 10	45
More derivative estimates for \mathcal{L}	45
Hessian inequality	47
Lecture 11	49
Monotonicity	49
Example of \mathbb{R}^n	50
Non-collapsing of reduced volume	51
Lecture 12	53
Non-collapsing	53
Completion of proof	53
Part 3. κ-solutions	57
Lecture 13	59
Curvature pinching in dimension 3	59
Shrinking solitons	59
Lecture 14	63
Study of the length functions in a κ -solution	63
Extensions of the inequalities	64
Convergence as $\tau \rightarrow \infty$	64
Lecture 15	67
Proof of the existence of an asymptotic gradient shrinking soliton	67
Enhanced gradient shrinking solitons	70
Lecture 16	73
Toponogov's splitting theorem	73
Classification of asymptotic gradient shrinking solitons	73
Lecture 17	77
Asymptotic volume ratio and asymptotic curvature	77
Asymptotic curvature of a κ -solution	77
Asymptotic volume ratio for a κ -solution	78
Lecture 18	81
Compactness of the space of κ -solutions	81
Proof of the compactness theorem for κ -solutions	82
Lecture 19	85
Review of compactness of 3-dimensional κ -solutions	85
Qualitative properties of κ -solutions	86
Geometry of 3-dimensional κ -solutions	87

Part 4. The Canonical Neighborhood Theorem	89
Lecture 20	91
Blow-up limits	91
Canonical neighborhood theorem	92
Lecture 21	97
Completion of the proof of the canonical neighborhood theorem	97
Step 2 of proof	97
Step 3 of proof	97
Lecture 22	101
Review of proof	101
Additive distance inequality	101
Part 5. Ricci Flow with Surgery	105
Lecture 23	107
What happens at T_{\max} ?	107
ϵ -horns	108
Structure of Ω	108
Topological description of surgery	109
Lecture 24	111
Geometric surgery on a Ricci flow	111
Surgery (refined)	112
The standard solution	112
Lecture 25	115
Existence of Ricci flow with surgery defined for all time: the statement and outline of proof	115
Noncollapsing	117
Lecture 26	121
ϵ -canonical neighborhood threshold parameter	121
Discreteness of the surgery times	123
Part 6. Behavior as $t \rightarrow \infty$	125
Lecture 27	127
Recap of results of previous parts	127
Normalized volume and scalar curvature at infinity	127
Lecture 28	131
Hyperbolic limits	131
Analytic results for large time	132
Lecture 29	135
Permanence of the hyperbolic pieces	135
Hyperbolic towers	136
Lecture 30	139

Incompressibility of the boundary tori	139
Structure of $M_{t,\text{thin}}(w)$	139
Lecture 31	141
The relative version of the Geometrization Conjecture	141
Proof that the theorem implies Geometrization Conjecture	142
Study of $M_{t,\text{thin}}(w)$	142
Lecture 32	145
The structure of sufficiently volume collapsed 3-manifolds	145
Gromov-Hausdorff limits	145
Alexandrov spaces	145
Structure of the $\rho^{-1}(x_n)B(x_n, \rho(x_n))$ when the limit has dimension 1	147
Structure of the $\rho^{-1}(x_n)B(x_n, \rho(x_n))$ when the limit has dimension 2	147
The global structure	148
Bibliography	149
