

Summary of contents

Part 1 Foundations	1
1 Atomic structure	3
2 Molecular structure and bonding	34
3 The structures of simple solids	65
4 Acids and bases	111
5 Oxidation and reduction	147
6 Molecular symmetry	179
7 An introduction to coordination compounds	199
8 Physical techniques in inorganic chemistry	223

Part 2 The elements and their compounds	255
9 Periodic trends	257
10 Hydrogen	274
11 The Group 1 elements	293
12 The Group 2 elements	309
13 The Group 13 elements	325
14 The Group 14 elements	350
15 The Group 15 elements	375
16 The Group 16 elements	398
17 The Group 17 elements	419
18 The Group 18 elements	440
19 The d-block elements	449
20 d-Metal complexes: electronic structure and properties	473
21 Coordination chemistry: reactions of complexes	507
22 d-Metal organometallic chemistry	534
23 The f-block metals	579

Part 3 Frontiers	599
24 Solid-state and materials chemistry	601
25 Nanomaterials, nanoscience, and nanotechnology	653
26 Catalysis	690
27 Biological inorganic chemistry	722
Resource section 1: Selected ionic radii	783
Resource section 2: Electronic properties of the elements	785
Resource section 3: Standard potentials	787
Resource section 4: Character tables	800
Resource section 5: Symmetry-adapted orbitals	805
Resource section 6: Tanabe–Sugano diagrams	809
