Foreword ..... xxi
Acknowledgments ..... xxv

## PART 1 PRINCIPLES OF MODERN EMBEDDED SYSTEMS

### CHAPTER 1 Embedded Systems Landscape ..... 3

What Is an Embedded Computer System? ..... 3
Applications and Form Factors ..... 4
Power ..... 4
System Resources and Features ..... 5
User Assumptions ..... 5
Why Is This Transition Inevitable? ..... 5
What Range of Embedded Systems Exists? ..... 7
What to Expect from the Rest of This Book ..... 8

### CHAPTER 2 Attributes of Embedded Systems ..... 9

Embedded Platform Characteristics ..... 12
Central Processing Unit (CPU) ..... 12
Integration Level ..... 13
Power Consumption ..... 14
Form Factor ..... 15
Expansion ..... 17
Application-Specific Hardware ..... 17
Certification ..... 18
Reliability/Availability ..... 18
User Interfaces ..... 19
Connectivity ..... 20
Security ..... 20
Summary ..... 21

### CHAPTER 3 The Future of Embedded Systems ..... 23

Technology Trends ..... 23
Computation ..... 24
Connectivity ..... 25
Storage ..... 29
Sensing ..... 30
Issues, Applications, and Initiatives ..... 30
Energy ..... 30

Security ..... 32
Health ..... 33
Challenges and Uncertainties ..... 34
Open Systems, Internet Access, and Neutrality ..... 34
Privacy ..... 35
Successful Commercialization ..... 36
Summary ..... 36

**PART 2 EMBEDDED SYSTEMS ARCHITECTURE AND OPERATION**

**CHAPTER 4 Embedded Platform Architecture ..... 41**

Platform Overview ..... 41
Processor ..... 41
System Memory Map ..... 43
Interrupt Controller ..... 44
Timers ..... 55
Volatile Memory Technologies ..... 61
DRAM Controllers ..... 62
SRAM Controllers ..... 66
Nonvolatile Storage ..... 67
NOR Flash ..... 68
NAND Flash ..... 70
Hard Disk Drives and Solid State Drives ..... 72
Device Interface—High Performance ..... 73
Peripheral Component Interconnect (PCI) ..... 74
Universal Serial Bus ..... 80
Programming Interface ..... 85
Linux Driver ..... 89
Device Interconnect—Low Performance ..... 89
Inter-Integrated Circuit Bus ..... 89
System Management Bus (SMBus) ..... 91
Serial Peripheral Interface (SPI) ..... 92
Audio Buses ..... 93
Inter IC Sound ($I^2S$) ..... 93
Universal Asynchronous Receiver/Transmitter ..... 93
General-Purpose Input/Output ..... 96
Power Delivery ..... 97
Summary ..... 97

**CHAPTER 5 Embedded Processor Architecture ..... 99**

Basic Execution Environment ..... 99
Privilege Levels ..... 103
Floating-Point Units ..... 104

Processor Specifics ..... 105
Application Binary Interface ..... 107
Processor Instruction Classes ..... 112
Immediate Operands ..... 113
Register Operands ..... 113
Memory Operands ..... 114
Data Transfer Instructions ..... 114
Arithmetic Instructions ..... 115
Branch and Control Flow Instructions ..... 118
Structure/Procedure Instructions ..... 119
SIMD Instructions ..... 120
Exceptions/Interrupts Model ..... 121
Precise and Imprecise Exceptions ..... 122
Vector Table Structure ..... 124
Exception Frame ..... 126
Masking Interrupts ..... 126
Acknowledging Interrupts ..... 128
Interrupt Latency ..... 128
Memory Mapping and Protection ..... 130
Memory Management Unit ..... 131
Translation Caching ..... 135
MMU and Processes ..... 135
Memory Hierarchy ..... 136
Local Memory ..... 138
Cache Hierarchy ..... 138
Cache Coherency ..... 142
System Bus Interface ..... 145
Memory Technology ..... 145
Intel Atom Microarchitecture (Supplemental Material) ..... 145
Microarchitecture ..... 146
Front End ..... 149
Memory Execution Cluster ..... 151
Bus Cluster ..... 152

**CHAPTER 6 Embedded Platform Boot Sequence ..... 153**

Multi-Core and Multi-Processor Boot ..... 153
Boot Technology Considerations ..... 154
Hardware Power Sequences (the Pre-Pre-Boot) ..... 156
Reset: The First Few Steps and a Jump ..... 157
Early Initialization ..... 159
CPU Initialization ..... 159
IA Microcode Update ..... 159
Device Initialization ..... 161
Memory Configuration ..... 161

Post-Memory Setup ..... 162
Shadowing ..... 163
AP Processor Initialization ..... 163
Advanced Initialization ..... 164
General-Purpose Input/Output ..... 164
Interrupt Controller ..... 164
Timers ..... 165
Cache Control ..... 165
UART Serial Ports ..... 166
Debug Output ..... 166
Configuration Storage ..... 167
PCIe Bus Initialization ..... 167
Image Storage ..... 168
USB ..... 168
SATA ..... 168
SDIO ..... 168
Legacy BIOS and UEFI Framework Software ..... 169
Legacy Operating System Boot ..... 169
Extensible Firmware Interface ..... 173
Cold and Warm Boot ..... 176
Summary ..... 177

**CHAPTER 7 Operating Systems Overview ..... 179**

Application Interface ..... 179
OS Application Interface ..... 179
OS Service Calls ..... 180
Processes, Tasks, and Threads ..... 181
Task Context ..... 184
Task State and State Transitions ..... 184
Scheduling ..... 186
Simple FIFO Scheduler ..... 186
Round-Robin Scheduler with Priority and Preemption ..... 187
Linux Kernel's Scheduler ..... 189
POSIX-Compliant Scheduler ..... 190
Memory Allocation ..... 191
Virtual Memory and Protection ..... 193
Freeing Memory ..... 195
Swapping Memory ..... 195
Clocks and Timers ..... 195
Synchronous Execution ..... 195
Asynchronous Execution ..... 196
Time of Day ..... 197
Mutual Exclusion/Synchronization ..... 197
Device Driver Models ..... 202

Low-Level Data Path ..... 207
Direct Memory Access ..... 209
Memory Addresses ..... 210
Bus Drivers ..... 212
Networking ..... 213
Buffer Management ..... 215
Polling Interface ..... 215
Acceleration ..... 216
Storage File Systems ..... 216
Device Wear and Tear ..... 218
Power Interactions ..... 219
Power Management ..... 219
Real Time ..... 221
Device Interrupt Delivery ..... 221
Processor Interrupt Handler ..... 222
Deferred Task ..... 222
RTOS Characteristics ..... 223
Licensing ..... 224

**CHAPTER 8 Embedded Linux ..... 227**

Tool Chain ..... 227
Getting the Tools ..... 228
Tools Overview ..... 229
Anatomy of an Embedded Linux ..... 231
Building a Kernel ..... 234
Kernel Build ..... 234
Kernel Options ..... 236
Root File System Build ..... 239
Busybox ..... 242
C Library ..... 243
Boot Sequence ..... 244
Debugging ..... 246
Debugging Applications ..... 246
Kernel Debugging ..... 247
Driver Development ..... 249
Character Driver Model ..... 250
PCI Device Drivers ..... 256
Interrupt Handling ..... 258
Memory Management ..... 262
User Space ..... 262
Access to User Space Memory from the Kernel ..... 262
Kernel Allocation ..... 263
Page Allocation ..... 264
The `kmalloc()` Function ..... 265

PCI Memory Allocation and Mapping ..... 265
Synchronization/Locking ..... 267
Atomic Operations ..... 267
Spinlock ..... 267
Semaphore ..... 268
Summary ..... 268

**CHAPTER 9 Power Optimization ..... 269**

Power Basics ..... 269
The Power Profile of an Embedded Computing System ..... 270
Constant Versus Dynamic Power ..... 271
Constant Power ..... 271
Dynamic Power ..... 271
A Simple Model of Power Efficiency ..... 273
Advanced Configuration and Power Interface (ACPI) ..... 275
Idle Versus Sleep ..... 277
ACPI System States ..... 277
Global System States (G*x* States) ..... 278
Sleep States (S*x* States) ..... 278
Device Power States (D*x* States) ..... 279
Processor Power States (C*x* States) ..... 280
Processor Performance States (P*x* States) ..... 280
Enhanced Intel SpeedStep Technology ..... 281
Optimizing Software for Power Performance ..... 281
Race to Sleep ..... 281
The Linux PowerTOP Tool ..... 282
Basic PowerTOP Usage ..... 282
Using PowerTOP to Evaluate Software and Systems ..... 284
Summary ..... 289

**CHAPTER 10 Embedded Graphics and Multimedia Acceleration ..... 291**

Screen Display ..... 293
Display Engine ..... 293
Window Management ..... 296
Screen Composition ..... 296
Embedded Pannels ..... 297
Display Query and Timing ..... 299
Copy Protection ..... 299
Graphics Stack ..... 299
Accelerated Media Decode ..... 301
Lip Syncing ..... 303
Video Capture and Encoding ..... 304
Video Capture ..... 304

Media Frameworks ..... 310
GStreamer ..... 310
OpenMAX™ ..... 313
Framework Summary ..... 315
Summary ..... 315

**CHAPTER 11 Digital Signal Processing Using General-Purpose Processors ... 317**

Overview ..... 318
Signals ..... 318
DSP Building Blocks ..... 319
Data Acquisition ..... 321
Fixed-Point and Floating-Point Implementations ..... 322
Single Instruction Multiple Data ..... 324
SIMD Microarchitecture and Instructions ..... 324
Operating System ..... 324
Microarchitecture Considerations ..... 325
Implementation Options ..... 325
Intrinsics and Data Types ..... 326
Vectorization ..... 328
Performance Primitives ..... 331
Finite Impulse Response Filter ..... 332
FIR Example: C Code ..... 333
FIR Example: Intel Performance Primitives ..... 333
FIR Example: Intel SSE ..... 334
Application Examples ..... 337
Codec ..... 337
Medical Ultrasound Imaging ..... 339
Performance Results ..... 344
Summary ..... 346

**CHAPTER 12 Network Connectivity ..... 347**

Networking Basics ..... 349
Layering and Network Software ..... 349
Node Operation and Network Hardware ..... 350
Sockets and a Simple Example ..... 351
TCP/IP Networking ..... 353
Governance, the IETF, and RFCs ..... 354
Addresses, Packets, and Routes ..... 355
Port Numbers, Byte Ordering, and OS Tools ..... 359
Supporting Protocols and Services ..... 360
Ethernet ..... 361
History ..... 361

Protocol Description ..... 362
Ethernet MAC Addresses ..... 363
Ethernet Packet Format ..... 363
A Gigabit Ethernet Controller and Its Features ..... 364
Wi-Fi and IEEE 802.11 ..... 365
History ..... 366
Protocol Description ..... 366
Frame Format ..... 367
A Wi-Fi Adapter and Its Features ..... 368
Bluetooth ..... 369
History ..... 369
Protocol Details ..... 369
Packet Format ..... 370
Linux Networking ..... 372
Tools and Monitor and Control Network Interfaces and Sockets ..... 372
Programming Sockets in C ..... 372
Linux Kernel Networking Structures ..... 376
Summary ..... 378

**CHAPTER 13 Application Frameworks ..... 379**

Overview ..... 379
Android ..... 379
Android Framework Architecture ..... 381
Android Application Architecture ..... 384
Android Development Environment ..... 389
Deployment ..... 391
Qt ..... 392
Qt Application Development Framework ..... 392
Qt Creator ..... 394
Other Environments ..... 394
More Resources ..... 395
Summary ..... 395

**CHAPTER 14 Platform and Content Security ..... 397**

Security Principles ..... 398
Confidentiality, Integrity, and Availability (CIA) ..... 400
Security Concepts and Building Blocks ..... 402
Encryption and Cryptography ..... 402
Secure Web Communications: TLS ..... 404
Secure Shell (SSH) ..... 407
Security Architecture for IP: IPSec ..... 408
Two-Factor Authentication ..... 411
Major Categories of Security Attacks ..... 411

Firewalls ..... 416
Servers and Logs ..... 419
Platform Support for Security ..... 420
Summary ..... 421

**CHAPTER 15 Advanced Topics: SMP, AMP, and Virtualization ..... 423**

Multiprocessing Basics ..... 424
History and Motivation ..... 424
A Concrete Example ..... 428
Physical versus Logical Cores ..... 432
Impact on Systems and Software ..... 432
Symmetric Multiprocessing ..... 433
Overview ..... 433
Linux SMP Support ..... 433
Interprocess Communication ..... 435
Asymmetric Multiprocessing ..... 435
Concepts and Motivation ..... 436
System Organization ..... 436
Virtualization Basics ..... 437
History and Motivation ..... 437
Basic Concepts ..... 437
Methods for Platform Virtualization ..... 438
Paravirtualization ..... 438
Hardware Support for Virtualization ..... 439
Linux VServers ..... 439
Xen™ ..... 439
Xenomai ..... 440
Summary ..... 442

**PART 3 DEVELOPING AN EMBEDDED SYSTEM**

**CHAPTER 16 Example Designs ..... 445**

Intel Atom E6XX Series Platforms ..... 445
Architecture Overview ..... 446
Platform Controller Hub(s) ..... 448
Multi-Radio Communications Design ..... 452
Hardware Platform ..... 452
Software Platform ..... 455
Multimedia Design ..... 458
Hardware Platform ..... 458
Software Platform ..... 459
Modular References ..... 463
Summary ..... 464

**CHAPTER 17 Platform Debug ..... 465**

Debugging New Platforms ..... 465
A Process for Debugging a New Platform ..... 466
Debug Tools and Chipset Features ..... 467
Oscilloscopes ..... 468
Logic Analyzers ..... 468
Bus Analyzers ..... 468
Power-On Self-Test (POST) Cards ..... 468
JTAG Adapters ..... 469
Debug Process Details ..... 469
Visual Examination ..... 469
Hardware Evaluation ..... 470
Software Evaluation ..... 474
Additional Resources ..... 474
Summary ..... 475

**CHAPTER 18 Performance Tuning ..... 477**

What Are Patterns? ..... 477
General Approaches ..... 478
Defined Performance Requirement ..... 478
Performance Design ..... 478
Premature Code Tuning Avoided ..... 479
Step-by-Step Records ..... 479
Slam-Dunk Optimization ..... 480
Best Compiler for Application ..... 480
Compiler Optimizations ..... 481
Data Cache ..... 482
Code and Design ..... 483
Reordered Struct ..... 483
Supersonic Interrupt Service Routines ..... 483
Assembly-Language-Critical Functions ..... 484
Inline Functions ..... 484
Cache-Optimizing Loop ..... 484
Minimizing Local Variables ..... 485
Explicit Registers ..... 485
Optimized Hardware Register Use ..... 485
Avoiding the OS Buffer Pool ..... 486
C Language Optimizations ..... 486
Disabled Counters/Statistics ..... 487
Processor-Specific ..... 488
Stall Instructions ..... 488
Profiling Tools ..... 488
Prefetch Instructions ..... 489

Separate DRAM Memory Banks ..... 489
Line-Allocation Policy ..... 490
Cache Write Policy ..... 490
Cache-Aligned Data Buffers ..... 491
On-Chip Memory ..... 491
Optimized Libraries ..... 491
Modulo/Divide Avoided ..... 492
Networking Techniques ..... 492
Bottleneck Hunting ..... 492
Evaluating Traffic Generator and Protocols ..... 493
Environmental Factors ..... 494

References ..... 497
Index ..... 503
