Preface to the first edition	xi
Preface to the second edition	xvii
1 Introduction	1
1.1 What is analysis?	1
1.2 Why do analysis?	2
2 Starting at the beginning: the natural numbers	13
2.1 The Peano axioms	15
2.2 Addition	24
2.3 Multiplication	29
3 Set theory	33
3.1 Fundamentals	33
3.2 Russell's paradox (Optional)	46
3.3 Functions	49
3.4 Images and inverse images	56
3.5 Cartesian products	62
3.6 Cardinality of sets	67
4 Integers and rationals	73
4.1 The integers	73
4.2 The rationals	80
4.3 Absolute value and exponentiation	85
4.4 Gaps in the rational numbers	89
5 The real numbers	93
5.1 Cauchy sequences	95
5.2 Equivalent Cauchy sequences	99
5.3 The construction of the real numbers	101
5.4 Ordering the reals	110

5.5	The least upper bound property	115
5.6	Real exponentiation, part I	120
6	Limits of sequences	125
6.1	Convergence and limit laws	125
6.2	The Extended real number system	132
6.3	Suprema and Infima of sequences	136
6.4	Limsup, Liminf, and limit points	138
6.5	Some standard limits	147
6.6	Subsequences	148
6.7	Real exponentiation, part II	151
7	Series	154
7.1	Finite series	154
7.2	Infinite series	163
7.3	Sums of non-negative numbers	169
7.4	Rearrangement of series	173
7.5	The root and ratio tests	177
8	Infinite sets	180
8.1	Countability	180
8.2	Summation on infinite sets	187
8.3	Uncountable sets	194
8.4	The axiom of choice	197
8.5	Ordered sets	201
9	Continuous functions on \mathbf{R}	210
9.1	Subsets of the real line	210
9.2	The algebra of real-valued functions	216
9.3	Limiting values of functions	219
9.4	Continuous functions	226
9.5	Left and right limits	230
9.6	The maximum principle	233
9.7	The intermediate value theorem	237
9.8	Monotonic functions	240
9.9	Uniform continuity	242
9.10	Limits at infinity	248
10	Differentiation of functions	250
10.1	Basic definitions	250

10.2	Local maxima, local minima, and derivatives	256
10.3	Monotone functions and derivatives	259
10.4	Inverse functions and derivatives	260
10.5	L'Hôpital's rule	263
11	The Riemann integral	266
11.1	Partitions	267
11.2	Piecewise constant functions	271
11.3	Upper and lower Riemann integrals	275
11.4	Basic properties of the Riemann integral	279
11.5	Riemann integrability of continuous functions	284
11.6	Riemann integrability of monotone functions	288
11.7	A non-Riemann integrable function	290
11.8	The Riemann-Stieltjes integral	291
11.9	The two fundamental theorems of calculus	294
11.10	Consequences of the fundamental theorems	299
A	Appendix: the basics of mathematical logic	304
A.1	Mathematical statements	305
A.2	Implication	311
A.3	The structure of proofs	316
A.4	Variables and quantifiers	319
A.5	Nested quantifiers	323
A.6	Some examples of proofs and quantifiers	326
A.7	Equality	328
B	Appendix: the decimal system	330
B.1	The decimal representation of natural numbers	331
B.2	The decimal representation of real numbers	334
	Index	339
